EIGHTH AND NINTH

ANNUAL REPORTS

OF THE

REGISTRAR-GENERAL.

EIGHTH

ANNUAL REPORT

OF THE

REGISTRAR-GENERAL

OF

BIRTHS, DEATHS, AND MARRIAGES,

IN ENGLAND.

LONDON:
PRINTED BY W. CLOWES AND SONS, STAMFORD STREET,
FOR HER MAJESTY'S STATIONERY OFFICE.
1849.

CONTENTS.

PAGE.

REPORT 1–47
Marriages, Births, and Deaths, 1838–45 1
Proportion of Marriages, Births, and Deaths to 100000 Persons living . 2

MARRIAGES.
Marriages, Births, and Deaths in each quarter, 1838–45 . . . 3
Marriages to 100000 persons living in the 7 years 1839–45; and persons married annually to 100000 persons living in each of the 7 years 1839–45 4
Proportion of Women married to Women living between the Ages of 15–45 5
Number of Persons married, registered in each year from 1756–1845 . 8
On the fluctuations of the Marriages and their value as indications of the prosperity of the country 8–31
Tables of the proportion of Marriages to Females living 1796–1845 . 30
Population 1761–1841, Marriages, annual rates of increase, and number of Persons living to one annual Marriage 1756–1845 . . . 30
Tables of Abstracts of Marriages registered in England during the years 1838–45, exhibiting the principal facts connected with them . . 33–5

BIRTHS.
Births to 100000 Males and 100000 Females living, 1839–45 . . 36
Proportion of Births to women living between the Ages 15–45 . . 37
Proportions of Male and Female, Legitimate and Illegitimate, Births Registered 38

DEATHS.
Deaths to 50000 Males and 50000 Females living, 1838–45 . . . 39
Relative Mortality in each Quarter of the Years 1838–45 . . . 39
Population, Births, Marriages, and Deaths in Naples; and the Mortality per cent. annually compared with that of London in the years 1837–42 44
Deaths Registered in 115 Districts of England in the December Quarters, 1838–45, showing the Numbers above and below the average Mortality, allowing for increase of population 44
Greenwich Meteorological Tables, 1844–5 44
Deaths Registered in 115 Districts and in all England, 1838–45 . . 46
Marriages, Births, and Deaths, with the proportion of each to 100000 living in England, France, Austria, Prussia, in each year, 1838–45 . 47

TABULAR DIGESTS OF THE MARRIAGE RETURNS, *referred to in the* REPORT. 48–70
Table of Marriages in eleven Divisions of England and Wales in each of the Years 1754–1845 48–9
Table of Marriages in the Counties of England in each Year 1754–1845. 50–5
,, Marriages in the twelve principal towns, in each Year, 1754–1845 56–7
Table of Marriages in eleven Divisions, during the years 1756–1845, in periods of 5 and of 10 years 58
Table of Marriages in Counties during Years 1756–1835, in periods of 5 and of 10 years 59–60
Table of Marriages in twelve of the principal towns during Years 1756–1830 in periods of 5 and of 10 years 61
Number of Persons Married annually in England, France, Prussia, Sweden, Norway, Denmark, Hanover, Saxony, Austria, Russia, and Sardinia, during the Years 1796–1845 62

PAGE.

TABLES of the Rates of MARRIAGE, of BIRTH, and of MORTALITY, &c.—
Proportion of Marriages, Births, and Deaths, in each Division and County in England 63
Average Annual Marriages, Births, and Deaths, in the Divisions and Counties of England, arranged in the order of Mortality . . . 64
Proportion of Marriages to 100 Males and 100 Females living, in each of the 7 Years 1839-45 in the several Divisions and Counties of England 65
Number of Persons who signed the Marriage Register with marks, in each of the Years 1839-45 66
Proportion per Cent. of Persons Married who signed the Marriage Register with marks, in each of the Years 1839-45 67-8
Proportion per Cent. of Persons married under 21 Years of Age, of the Re-marriages of Widowers and Widows, and of Persons who signed the Marriage Register with marks, in the Year 1844 69
Ditto ditto in the Year 1845 70
Proportion of Births to 100 Males and 100 Females living, during each of the 7 Years 1839-45, in the several Divisions and Counties of England 71
Total Male and Female Births Registered in England in 7 Years, (1839-45,) also the Ratio of Males to Females and the Proportion per Cent. 72
Proportion of Male and Female Births Registered in England in 7 Years 1839-45, also the Proportion of Male to Female Births of the Legitimate and Illegitimate Children Registered in the Years 1842 and 1845 72
Illegitimate Children Registered in each District in the Year 1845, also the Proportion per Cent. on the Total Births 73
Proportion per Cent. of Illegitimate Children to Births Registered in 1845, compared with 1842 74-80
Proportion of Deaths Registered to 100 Males and 100 Females living, in Divisions and Counties of England, in each of the 8 Years 1838-45 81
Deaths in London from 95 causes, and at 24 periods of life, in 1845 .82-89
Ditto ditto in 1846 .90-97
The Number of Buildings Registered in England and Wales for the Solemnization of Marriages on December 31, 1846 98-9
Female Population and proportion per cent. of Wives, Widows, and Spinsters in different European countries 100

REPORT.

To the Right Honourable Sir GEORGE GREY, Bart., M.P.

Her Majesty's Principal Secretary of State for the Home Department.

General Register Office, March 25, 1847.

Sir,

In conformity with the sixth section of the Registration Act, 6 and 7 Wm. IV. cap. 86, I have the honour to submit to you a general abstract of the Marriages, Births, and Deaths registered in England during the year 1845.

These abstracts have been made for the Years 1838–45; and the aggregate corrected annual returns are in the annexed table (*a*).

143743 marriages, 543521 births, and 349366 deaths were registered in 1845. The names of 1180373 persons and the circumstances connected with them, prescribed by the Schedules of the Act were recorded.

The marriages exceeded the number registered in any previous year; they exceeded the marriages in 1844 by 11494, the marriages in 1842 by 24918.

The births registered rose progressively from 463787 in 1838 to 543521; which I ascribe in a great measure to the increased efficiency of the Registrars.

The deaths are less by 7567 than the deaths registered in the year preceding; and the excess of births registered over deaths, namely 194155, was greater than in any previous year.

The population of England returned by the Census Commissioners in 1841 was 15912773; and assuming that the numbers increased at the rate of 1·335 per cent. annually* (the rate at which the female population increased from 1831 to 1841) the proportion of the marriages, births, and deaths to the population is given in the subsequent table (*b*).

By taking the mean of the rates of birth and death in the seven consecutive years, and in both sexes, the results admit of comparison, in districts and counties where the sexes are in different proportions, and increase at different rates. On an average to 100 persons living (50 males and 50 females) 1·570 were married, 3·218 children were born

(*a*)

Years –	1838	1839	1840	1841	1842	1843	1844	1845
Marriages – –	118067	123166	122665	122496	118825	123818	132249	143743

Excess of Births Registered over Deaths – –	121027	153590	142616	168311	168220	180880	183830	194155

* See the previous Reports, 6, 7. This is the annual rate of increase deduced from the females enumerated in 1831 and 1841, on the assumption that the interval between the two censuses was exactly 10 years.

alive, and 2·175 died annually; or about 1 in 64 persons married, 1 in 46 died. To 31 living there was 1 annual birth. The marriages fluctuated from 1·473 in 1842, to 1·713 in 1845, the births from 3·177 to 3·264, the deaths from 2·082 in 1845, to 2·290 in 1840. The marriages fluctuated most, the births least: a great part in fact of the range in the rate of birth was only apparent, and arose from the imperfection in the registration of the first year.

It is evident that there is a connection between the rates of marriage, birth and death, in a country. If the population, kept up by births only, were stationary, the births instead of being 3218 to 100000 persons living, would be equal to the deaths, and if all married once the same number would express the proportion married. There would be *one* married, *one* born, *one* dead annually to every 46 living; and 46 years would be the mean duration of life.

But the births now exceed the deaths in the proportion of 3 to 2; and as marriage only takes place between adults, the proportion of persons married to the living, is necessarily less than the proportion dying; and still less than the proportion born, although 10·6 per cent. of the persons married in 1845 had been married more than once.

There were only about 1404 persons married annually for the first time to 100000 living 1839–45; but assuming that they were born on an average 25 years before marriage, the proportion is 2003 to 100000 living of that day: add 283 for births not registered to the 3218 above given, and the children born are to those of them who marry nearly as 3501 to 2003, or as 100000 to 57212. I do not give this as a correct result, but as an example of the various considerations to be taken into account in increasing populations. The simple comparisons applicable to stationary populations have to give place to complicated formulas. In the 4 years 1842-5 there were registered 518635 marriages, 1402263 deaths, 2129348 births; or to 10 *persons married* 13·519 deaths, 20·529 births, and nearly 41 births and 27 deaths to 10 marriages. The deaths were to

(*b*)

YEARS.	To 100000 Persons Living, (50000 Males, 50000 Females.)			Excess in the Rate of Birth over the Rate of Death.
	Persons Married.	Births.	Deaths.	
1838	–	–	2240	–
1839	1589	3177	2188	989
1840	1562	3197	2290	907
1841	1539	3217	2161	1056
1842	1473	3209	2167	1042
1843	1515	3226	2120	1106
1844	1597	3264	2155	1109
1845	1713	3238	2082	1156
Mean – –	1570	3218	2175	1052
	Of the Persons living nearly one in			
Mean – –	64	31	46	95
	One in			
Highest Year	(1845) 58·38	(1844) 30·64	(1840) 43·67	(1845) 86·51
Lowest Year	(1842) 67·89	(1839) 31·48	(1845) 48·03	(1840) 110·25

the births as 10 to 15·185; or nearly as 2 to 3. If we add ·232 per cent. to the births in the 4 years for those that may have escaped registration; and deduct 7 per cent. for those born out of wedlock, the number of legitimate children born is 2122356. The marriages 8 years before, in the 4 years 1834–7 were 476705, which may perhaps be taken to represent the number of marriages, of which 2122356 births are the issue. On this assumption there would be nearly 4·45 children to a marriage on an average, and correcting for second marriages 5 children *born in wedlock* to every man and woman married.

Since registration commenced in July, 1837, the marriages of 2127016, the births of 4264286, the deaths of 2936242 persons have been registered.

The number of names recorded in the 8½ years is more than nine millions, or 9327544.

The next Table (*c*) shows the number of marriages, births, and deaths, registered in each quarter of 8 years. The marriages, it will be observed, are in general least numerous in winter, and most numerous after harvest in the December quarters; the births and deaths, on the contrary, are

most numerous in the winter quarters ending March, and least numerous in the summer quarters ending September.

Marriages.—(Table *d.*) The proportion of persons married to the population decreased gradually from the year 1839 to 1842; from 1842 there was a rise through 1843 and 1844 to 1845, when the proportion of persons married was greater than has been observed in this country for many years. The increase from 1472 to 1713 persons married in 100000 is a rise of 16·4 per cent. on the first number; or of one-sixth part, the numbers being to each other in such proportion that in the same population for 6 persons married in 1842, 7 were married in 1845. On comparing the years 1842 and 1845 in the annexed table, it will be seen that the increase in the proportion of marriages in London from 1863 to 2145 was near that of the kingdom (15 per cent.); that the increase was greatest in the North Western division (Lancashire, Cheshire) (33 per cent.) and in Yorkshire; greater than that of England in the Western and Northern divisions; rather less in the North Midland counties, considerably less in Wales (1356 to 1470); slight in the South Western division (1418 to 1504), South Eastern division (1365 to 1484), and Eastern (1372 to 1486). In the South Midland division, the proportion of persons married to 100000 living in each of the four years was 1358, 1349, 1392, and 1393.

The relative tendency to marriage in different communities at different times is correctly expressed by the proportion which the persons married in a given time (say a year) bear to the single persons living at a marriageable age, during the same time.

In the Sixth Report, I have shown that the female population of the country was 8144086 in the middle of the year 1841; and that between the ages of 15 and 45 there were 3811654 women living, of whom it was estimated that about 1733576 were married, and 2078078 single.*

The average annual number of marriages was 123041 in the 7 years

(*d*)—Marriages to 100000 Persons living in the Seven Years, 1839–45; and persons married annually to 100000 living; 50000 of each Sex.

* 6th Report, page xxxiv. The population (3811654) in the *middle* of the year 1841, is derived from the population enumerated, June 6–7, and the rate of increase, 1831–41; it therefore differs slightly from the more correct estimate in the following page.

1838–44; about 1 in 17 unmarried women, between the ages 15 and 45, was therefore married annually throughout the kingdom. But the proportion, in the population, of women at the age 15–45, and of women married and single at that age, will necessarily differ in different parts of the country. The common comparison of the marriages to the population, or that which I think preferable, of the persons married to the population, gives an approximation to the results sought, but must always be used with some qualification. (*e*)

(*e*)—Table of the Proportion of Women Married, to Women living, between the Ages 15–45.

No.		Females living in 1841 at the Ages 15–45.*	Marriages in the 7 Years 1839–1845 or the Number of Women Married.	Average Number of Women Married Annuallly.	Women Married Annually to 100 Women living at the Age 15 and under 45.	Women Married Annually to 100 Females living of all Ages.

* The Female Population of England at Ages 15–45 is from the Tables of Mortality in a subsequent page. The Population enumerated on June 6–7th, 1841, was multiplied in all other cases by r 1·07. The values of r in the several divisions are given in another part of the Report.

The fluctuation in the marriages of a country expresses the views which the great body of the people take of their prospects in the world. And judged by this test they were never more sanguine than in the years 1844 and 1845. The annual average price of wheat fell from 71 shillings a quarter in 1839 to 66*s.*, 64*s.*, 57*s.*, through the three subsequent years, and remained steadily at 50*s.* and 51*s.* through 1843, 1844, 1845. The 3 per cent. Consols rose from 89 in 1841, to 94 in 1842, to 96 in 1843, and to 100 in 1844, when the three and a-half per cents. were reduced. In 1842, 3, 4, 5, the great changes in the Tariff were effected. Commerce revived from the languor under which it suffered in 1842; enterprise awoke; money was called for, and labour was set in motion on all sides with the real and imaginary capital current. Great numbers of persons were engaged on the railways, a new field of labour on which the Chancellor of the Exchequer has stated that 6 million *l.* were expended in 1844, and 14 million *l.* in 1845. Under these circumstances 50000 more persons married in 1845 than in 1842. Few examples occur of such an increase in the marriages in England since the year 1754, as is seen in the Table I. (page 8), which shows the number of persons married or double the number of marriages returned every year since 1756.

The Tables II., III., IV., V., VI., and VII., (see the series of Tables pp. 48 to 61) show the marriages in the several divisions and counties, and in some of the principal towns of the kingdom from the year 1754, when the Marriage Act (24 Geo. II., cap. 33,) came into operation down to 1845.* The facts for the first 77 years were collected by

* Smollett gives the following account of the Marriage Act which passed in 1753:—"Another Bill transmitted from the Upper House, met with a reception equally unfavourable among the Commons, though it was sustained on the shoulders of the majority, and thus forced its way to the throne, where it obtained the royal approbation. The practice of solemnizing clandestine marriages, so prejudicial to the peace of families, and so often productive of misery to the parties themselves thus united, was an evil that prevailed to such a degree as claimed the attention of the legislature. The sons and daughters of great and opulent families, before they had acquired knowledge and experience, or attained to the years of discretion, were every day seduced in their affections, and inveigled into matches big with infamy and ruin; and these were greatly facilitated by the opportunities that occurred of being united instantaneously by the ceremony of marriage, in the first transport of passion, before the destined victim had time to cool or deliberate on the subject. For this pernicious purpose, there was a band of profligate miscreants, the refuse of the clergy, dead to every sentiment of virtue, abandoned to all sense of decency and decorum, for the most part prisoners for debt or delinquency, and indeed the very outcasts of human society, who hovered about the verge of the Fleet Prison to intercept customers, plying like porters for employment, and performed the ceremony of marriage without license or question, in cellars, garrets, or ale-houses, to the scandal of religion, and the disgrace of that order which they professed. The ease with which this ecclesiastical sanction was obtained, and the vicious disposition of those wretches open to the practices of fraud and corruption, were productive of polygamy, indigence, conjugal infidelity, prostitution, and every curse that could embitter the married state. A remarkable case of this nature having fallen under the cognizance of the Peers, in an appeal from an inferior tribunal, that House ordered the judges to prepare a new Bill for preventing such abuses; and one was accordingly framed, under the auspices of Lord Hardwick, at that time Lord High Chancellor of England. In order to anticipate the bad effects of clandestine marriages, this new statute enacted, 'That the banns should be regularly published, three successive Sundays, in the church of the parish where the parties dwell; that no license should be granted to marry in any place

Mr. Rickman, and published in the Parish Register Abstracts of 1801, 1811, 1821, and 1831. It will be seen in Table II. (pp. 48–9), that the returns for the several counties down to 1800 are not perfect: the publication of 1801 like the census of that year was disfigured by a few arithmetical errors, and Mr. Rickman had not succeeded in procuring returns from every parish. He subsequently gave a corrected list of the marriages every year in the whole kingdom, but did not correct the returns of the counties. Such of the arithmetical errors as can be corrected are here rectified, and the list is available for the purposes of comparison. Where parishes are left out, as at Hull, (Table IV.) the

---

where one of the parties has not dwelt at least a month, except a special license by the archbishop: that if any marriage should be solemnized in any other place than a church or a chapel, without a special license, or in a public chapel, without having published the banns, or obtained a license of some person properly qualified, the marriage should be void, and the person who solemnized it transported for seven years; that marriages, by license, of parties under age without consent of parent or guardian, should be null and void, unless the party under age be a widow, and the parent refusing consent, a widow married again: that when the consent of a mother or guardian is refused from caprice, or such parent or guardian be *non compos mentis*, or beyond sea, the minor should have recourse for relief to the Court of Chancery: that no suit should be commenced to compel a celebration of marriage, under pretence of any contract: that all marriages should be solemnized before two witnesses, and an entry be made in a book kept for that purpose, whether it was by banns or license, whether either of the parties were under age, or the marriage celebrated with the consent of parent or guardian, and this entry to be signed by the minister, the parties, and the witnesses: that a false license or certificate, or destroying register-books, should be deemed felony, either in principal or accessary, and punished with death.' The Bill, when first considered in the Lower House, gave rise to a variety of debates, in which the members appeared to be divided, rather according to their real sentiments, than by the rules of any political distinction, for some principal servants of the government freely differed in opinion from the minister, [Mr. Pelham,] who countenanced the Bill; while, on the other hand, he was, on this occasion, supported by certain chiefs of the opposition, and the disputes were maintained with extraordinary eagerness and warmth. The principal objections imported, that such restrictions on marriage would damp the spirit of love and propagation; promote mercenary matches, to the ruin of domestic happiness, as well as to the prejudice of posterity and population; impede the circulation of property by preserving the wealth of the kingdom among a kind of aristocracy of opulent families, who would always intermarry within their own pale; subject the poor to many inconveniences and extraordinary expense, from the nature of the forms to be observed, and throw an additional power into the hands of the Chancellor. They affirmed that no human power had a right to dissolve a vow solemnly made in the sight of heaven; and that, in proportion as the Bill prevented clandestine marriages, it would encourage fornication and debauchery, insomuch as the parties restrained from indulging their mutual passions in an honourable manner, would be tempted to gratify them by stealth, at the hazard of their reputation. In a word, they foresaw a great number of evils in the train of this Bill, which have not yet been realized. On the other side, its advocates endeavoured to refute these arguments, and some of them spoke with great strength and precision. The Bill underwent a great number of alterations and amendments, which were not effected without violent contest and altercation; at length, however, it was floated through both houses on the tide of a great majority, and steered into the safe harbour of royal approbation: certain it is, the abuse of clandestine marriage might have been removed upon much easier terms than those imposed upon the subject by this Bill, which after all hath been found ineffectual, as it may be easily eluded by a short voyage to the Continent, or a moderate journey to North Britain, where the indissoluble knot may be tied without scruple or interruption."—*Hist. England*, book 3, sec. 26, chap. 2. See also the report of the animated and protracted debates on the Clandestine Marriage Bill, in the Parliamentary History, vol. xv.

omission runs through the whole series from 1754 to 1800. Mr. Rickman's judicious labour in collecting the returns was successful, and the result is of inestimable value. I am not aware that any other country possesses such a contribution to statistics as this, for which we are indebted to him, and to the Clergy of the Established Church. Little use has hitherto been made of the documents which I have given in a digested form, with a view to examine rapidly some of the circumstances in the history and progress of the country, connected with the fluctuations in the marriages. It will be evident in the course of the inquiry that the variations in the numbers indicate very accurately the prosperity and adversity, or what appears to the people at the time to be the prosperity and adversity of England.

TABLE I.—Number of Persons Married, Registered in each Year, from 1756 to 1845.

The marriages increased at fluctuating rates during the whole period; and while 96600 persons were married in 1757, the number married in 1845 was 287486. These numbers are to each other as 1 to 3, and are the lowest and highest in the series of 90 years. The average number of persons married annually in the 10 years 1756–65, was 112549; in the 10 years 1837–46, the average was 248050: the latter, the grandchildren and great-grandchildren of the former, are more than double the number of their ancestors.

The numbers married rose from 96600 in 1757, to 115696 in 1760, 116202 in 1761, fell to 113086 in 1762, and rose again to 124466, and 126620 in the two years 1763 and 1764. The advance of 19602 in the four years from 1757 to 1761, the year after the accession of George III., is 20 per cent., and nearly the same in proportion as in 1842–5. It was a period of war with France, but it was the war conducted for some time after 1757 by Chatham, which commenced with the humiliating convention of Closterseven (1757), the threat of a French invasion, the disgrace of Byng, and after the conquest of Canada and Pondicherry—of French America and India—terminated in the peace of Paris 1763.

1757 was a year of scarcity and distress; wheat, which was 28*s.* a quarter in 1755, rose to 38*s.* in 1756, 50*s.* in 1757; prices gradually declined to 42*s.* 33*s.* 31*s.* and 25*s.*; abundance reigned in the 4 years ending in 1761.* The prices rose only to 33*s.*, 34*s.*, 39*s.* in the three

* The Returns of the Eton Market are used until the Return of the Corn Receiver commenced. The average price of wheat per imperial quarter, deduced from the Eton books corrected, was 40*s.* 7*d.* in the 17th, and 40*s.* 6*d.* in the 18th century. See paper on the Influence of Scarcity, (Stat. Journal, June, 1846, p. 163).

years ending with 1764. The funds declined and the national debt and expenditure increased during the war; but the increase in the supply of food and the energy with which the nation was inspired under the administration of Lord Chatham, promoted enterprise, and filled the people with hope, and anticipations of prosperity; expressed numerically by the rapid increase of the number of marriages. This period is the starting point from which the more rapid rate of increase of population commenced, that has prevailed down to the present day, amidst all the changes which have occurred.

The increase of the marriages in London during the period was most remarkable: 5823 marriages took place in 1757; 7205 in 1760; and 9367 in 1763. The marriages in Portsmouth increased rapidly; in Plymouth the marriages during the whole war were numerous. In Bristol and Liverpool the increase was less considerable. The marriages at Bath increased after the war. The marriages in the 3 years 1757, 1760 and 1763, were, in Birmingham 192, 259, and 283; in Manchester 284, 380, and 363; in Leeds 247, 230, and 260; Newcastle-upon-Tyne 235, 207, and 270; York City 122, 151, and 155. The Marriages increased in all the groups of counties which are here called divisions. (Table II. pp. 48–9.) In the 3 years 1757, 1760, 1763, the marriages in Kent, Sussex, Hants, Berks, were 4198, 5063, 5348; in the South Midland and the Eastern Divisions the increase was rather less; in the South Western and the Western it was more. In Wales, in Leicestershire, and all the counties lying north, there was an increase, but on the whole it was less than in the southern parts of the island. In the north, however, the increase went on through 1764.

The next remarkable fluctuation in the number of marriages was in the six years 1782–1787, when the numbers of persons married were 126142, 132874, 137870, 143018, 137984, 152896. The difference between the first and last number is 26754. Wheat which had risen to 54*s.* a quarter (imperial measure) in 1783, fell to 40*s.* in 1786, and 42*s.* in 1787.* England was at war with America, France, and Holland; the disastrous surrender of the British troops at York Town happened at the close of the year 1781. The 3 per cents. were down at 58. In 1783 the coalition ministry of North and Fox was formed and dissolved. Peace was concluded, and the independence of America acknowledged. Mr. Pitt began his career of prime minister. In 1786 Mr. Pitt brought forward his celebrated plan for the extinction of the national debt of 268 millions, not in the old-fashioned way of gradually paying it off out of a surplus revenue, but by a sinking fund accumulating at compound interest! The glittering delusion in which the sound proposal to pay off the debt was dressed up excited rather than damped the public enthusiasm. On February 12th, 1787, Mr. Pitt introduced his commercial treaty with France. She procured, he said, a market of 8 millions of people† for her wines and luxuries; we a market

* Corn Receiver's Returns. The imperial measure is used throughout.

† Pitt's Speeches, vol. i. p. 252. Mr. Pitt refers to the population of Great Britain, which at the time he spoke was about 9 millions. See the treaty in Pitt's Life by Gifford, vol. i., App. B. The population enumerated in 1801, including a due proportion of the army and seamen, was 10857000. The population of Great Britain and Ireland in 1801 was about 16 millions. The population of France enumerated 1800–1 was 27349003. It was estimated at 24800000 in 1784. Statistique de la France, Population, p. 154–163.

of 24 millions for our manufactures. Manufactures and commerce flourished. The value of cargoes of merchandize exported from England was 10579187*l.* in 1781 ; 15754980*l.* in 1787.* The funds rose to 74 in 1786, and remained on an average the same through 1787.

The numbers of persons married in the three years 1788, 89, 90, were 140064, 141392, and 141296; they rose to 145180 in 1791, to 149838 in 1792. In the last three years 1790, 1, 2, the price of wheat had fallen from 55*s.* a quarter to 43*s.*; the 3 per cents. had risen from 77 to 90. The capital of the country had been rapidly accumulating; the interest of money in the funds ($3\frac{1}{3}$ per cent.) and in ordinary investments was low; when attention was directed to the great profits realized in canals. New canals were projected and shares were issued; large sums were subscribed; and the whole country was soon in a ferment of speculation. It was like that in railways, a speculation that set labourers to work, and, as has been seen, was attended by an increase of marriages. Reaction took place. The funds fell to 76. And 1304 bankrupts were declared in 1793, instead of the average of 500 to 600.† A Committee was appointed (April, 1793) to inquire into the causes of mercantile embarrassment, and Mr. Pitt moved for an issue of 5 million pounds sterling of Exchequer Bills, to be advanced under certain conditions to those who required assistance. France declared war against Great Britain on the 1st of February, 1793.

After 1764 the marriages in Middlesex and Surrey—the metropolitan counties—never in any year except 1776 exceeded 8800, until 1783, when the annual number reached 9494, and increased slowly to 9881 in 1787, to 11270 in 1792. At Plymouth and Portsmouth there was an increase of marriages in 1783, when sailors and soldiers were discharged in great numbers. In Bristol there was an increase of 100 marriages in 1784, and again in 1791 and 1792. The marriages at Birmingham were 423 in 1782 ; 520, 591, 558, 589, and 623 in the five years 1783–7 ; in 1788 and 1789, the numbers were 782 and 903; in 1790–2 only 649, 705, 606. The "Church and King" riots broke out on July 14th, 1791, in Birmingham; and the mob burnt Dr. Priestley's library, several houses and some dissenting chapels; in May, 1792, they assailed the brothels of the town, but the magistrates this time evinced some vigour and put a stop to the outrages. A staple manufacture of Birmingham had been subject to one of the mutations of fashion, which caused great distress; for it is recorded that on December 21st, 1791, "several respectable "buckle-manufacturers from Birmingham, Walsall, and Wolverhampton, "waited upon His Royal Highness the Prince of Wales, with a petition "setting forth the distressed situation of thousands in the different "branches of the buckle manufacture, from the fashion now and for "some time back, so prevalent, of wearing shoe-strings instead of buckles. "His Royal Highness graciously promised his utmost assistance by his "example and influence."‡ After the recovery of George III. from his first illness in 1789, an immense number of buckles were manufactured about Birmingham ;§ Walsall among other places invested the

* Historical View of the Domestic Economy of Great Britain and Ireland, by G. Chalmers, p. 315.

† Chalmers' History of Economy of Great Britain, p. 223.

‡ Ann. Register, vol. xxxiii, p. 54.

§ A new metal for buckles was introduced in 1778, which was easily worked;

greater part of its available wealth in the speculation. The King unfortunately went in the state procession to St. Paul's without buckles; and Walsall was nearly ruined. Shoe-strings gradually supplied the place of straps. The effect of this freak of fashion and speculation on the marriages of Birmingham has been seen; and it had probably more to do with the licentious Birmingham riots, than the more patent political agitation of the day. The disuse of wigs, buckles, buttons, and leather breeches at the close of the eighteenth century, is supposed to have affected the business of a million of people. In 1765, the peace of London had been disturbed by the periwig-makers, who went in procession to petition the young King, "submitting to His Majesty's goodness and "wisdom, whether his own example was not the only means of rescuing "them from their distress, as far as it was occasioned by so many people "wearing their own hair."* During the present period, Manchester flourished by the progress of its useful manufactures. The marriages which were only 495 in 1781, rose to 567, 682, 848, and 893, in the four following years; they did not increase very much from 1785 to 1789; in 1790, 1791, and 1792, the marriages ran up to 1122, 1301, and 1657. This was partly the result of speculation, and the numbers fell the year following to 1235. The progress in Liverpool was much slower; in Leeds, Newcastle-upon-Tyne, Hull, and York, there was little progress. In what are now known as the manufacturing districts—namely, in the North Midland Division, in Cheshire and Lancashire, the marriages increased generally; it was an indication that for some time they would outstrip the rest of the country. In the South Western Division the marriages increased from 7646 in 1782, to 8503 in 1785, and then decreased to 7698 in 1792.

The marriages in England decreased from 1792 to 1795. The price of provisions rose until 1795, which was a year of great distress and scarcity. The winter of 1795 was excessively severe; and wheat was 75*s.* a quarter. The funds were 66. The number of persons married in 1795 was only 137678. The funds fell to 50 in 1798. The price of wheat rose, in 1796, to 79*s.* a quarter, but declined to 52*s.* in 1798, when the harvest was abundant. Manchester suffered in 1795; and at Liverpool, the marriages, which had declined, made a sudden start in 1797 and 1798. In nearly all the counties the marriages were fewer in 1795 than in 1794, and rose progressively to the year 1798. The number of persons who married in all England, rose from 137678 in 1795, to 158954 in 1798. It was one of the great fluctuations in the series of returns. The increase was 21276. Yet the period was disastrous; the war was raging, and negotiations for peace failed: the taxation, from 17858000*l.* in 1795, rose to 30203000*l.* in 1798, and 93 millions were raised by loans: the fleet mutinied, and Ireland was in open rebellion (1797–98). In August 1798, Nelson, however, fought the battle of the Nile; and the military spirit of the nation was roused by the

---

the "uncommon beauty" of design, and cheapness attained, extended the trade infinitely beyond its former limits, so that in 1778 there were not fewer than 4000 to 5000 hands employed on this article, at wages of 2000*l.* a week. Each buckle passed through the hands of twelve workmen.—Hutton's History of Birmingham, by Guest sixth ed. 1835, p. 177–9.

* The disturbance is thus accounted for in the Annual Register. "Several of the peruke-makers who attended on this occasion, gave such offence by their inconsistency in wearing their own hair, that they had it cut off by the mob." Vol. viii. p. 64.

threat of French invasion. In 1797, cash payments were suspended at the bank; nominal prices rose; an impulse was given to the manufactures of the country now aided by Arkwright's and other mechanical inventions. The official value of exports was 27 million *l.* in 1795, and 33 million *l.* in 1798; which is in itself a decisive proof that the employment of the working population was largely augmented. Acts of Parliament were passed for the encouragement of Friendly Societies, for preventing the removal of poor persons, (1792-3,) till they became actually chargeable, and allowing occasional relief to the poor in their *own houses.* Mr. Whitbread attempted, in 1796, to bring in a Bill fixing a minimum of wages. Mr. Pitt warned him against the results of his plan, but admitted that the condition of the poor "was cruel, and such as could not be wished "on any principle of humanity or policy." He went on to say, "What "measures then can be found to supply the defect? Let us make relief "(by the parish) in cases where there are a number of children a matter "of right and an honour, instead of a ground for opprobrium and con- "tempt. This will make a large family a blessing and not a curse; "and this will draw a proper line of distinction between those who are able "to provide for themselves by their labour, and those who after having "enriched their country with a number of children have a claim upon "its assistance for their support."*

The marriages as we have seen rose from 68839 in 1795, to 79477 in 1798; and the baptisms ascended in due order from 247218 to 262337; so that the minister's words did not fall on a barren soil. The average sum expended annually for the relief of the poor was 2 million *l.* in 1783–5,† and 4 million *l.* in 1801; the rise took place in the intermediate period.

The expressions of the First Minister of the Crown, the extension of relief to the poor, the war which, while it took away a large number of the working classes, enhanced the price of labour then in demand in all branches of business, and the vast expenditure of capital, convinced large numbers of the people that their position in life was improved; and countervailed many circumstances in the country manifestly unfavourable.

The marriages began to decline in 1799; 155114 persons were married in that year, 139702 in 1800, and only 134576 in 1801. A sudden rise took place in 1802, when 180792 persons were married; and in the year following 188758 persons were married. The difference between the numbers married in 1801 and in 1803 is 54182. It is a fluctuation of 40 per cent.; and the greatest on record. In the metropolitan counties, the marriages were 11135 in 1799; 10523 in 1800; 10706 in 1801; 13862 in 1802; and 13507 in 1803. In 1801, 1802, 1803, the marriages in Birmingham were 683, 1177, 1115; in Manchester 1242, 2121, and 2336; in Liverpool 1202, 1516, 1312; in Leeds 465, 640, 673; in Newcastle 259, 378, 405; in York 186, 255, 253. The depression in 1801 and the rise in 1803 pervaded in different degrees all the counties. In the agricultural counties of the South Midland division, the marriages were 4406 in 1801, and 5949 in 1803. In Lancashire and Cheshire the marriages were 7532 in 1801, 11564 in 1802, and 11896 in 1803. The winter of 1798–9 set in early and was extremely

* Pitt's Speeches, vol. ii. p. 134.

† M'Culloch's Stat. British Empire, 1st ed., vol. ii., p. 655.

rigorous; vegetation had no vigour, and the spring was unkindly; summer was cold, autumn wet; all the crops were injured, and some were destroyed. Lord Hawkesbury estimated the deficiency of the wheat crop at one-third of the usual produce. Half the crop of the next year (1800) was secured before August 19th, when heavy rains, and warm close weather set in which made the wheat sprout. A Committee of the House of Commons on the high price of provisions estimated the deficiency of the wheat crop at something less than one-fourth of the usual produce. The scarcity of two successive years pressed heavily on the poor. The seasons and crops of 1801, 1802, and 1803 were good; large quantities of wheat, encouraged by a bounty, were imported, and the average prices of wheat fell from 114*s.* in 1800, and 122*s.* in 1801, to 70*s.* in 1802 and 58*s.* in 1803. The monthly average prices of wheat rose gradually from 52*s.* the imperial quarter in March 1799, to 159*s.* in March 1801, and declined to 58*s.* in March 1803, to 52*s.* in March 1804. The number of bushels of malt made in the four consecutive years 1800, 1, 2, 3, was 14, 18, 29, and 30 millions. The funds rose from 50 in 1798, to 58 in 1799, 63 in 1800, 61 in 1801, 70 in 1802; and fell to 59 in 1803. The manufactures of the country increased rapidly during the period; 26 million pounds of cotton wool were imported annually in 1793–8; and 54 million pounds annually in 1799–1803. In the same periods the importation of wool rose from 3631000 lbs. to 6985000 lbs. annually.

The tonnage of ships cleared outwards rose from 1717325 tons in 1799, to 2027608 tons in 1803.* Wages rose after 1800. At Greenwich Hospital the average daily wages of a carpenter, bricklayer, mason, and plumber were 3*s.* in 1800, and 4*s.* 9*d.* in 1805.† Farm labourers' wages rose from about 8*s.* 11*d.* a-week in 1796, to 11*s.* 5*d.* in 1803. The rise of wages, however, bore no sort of proportion to the rise in the price of bread, and the other necessaries of life in 1800. Under the Bank Restriction Act, in operation since 1797, the Bank of England notes in circulation were 12 million *l.*, and the bullion in its possession 6500000 *l.*, in August 1798; the circulation was 15 million *l.*, the bullion 5 million $\frac{1}{2}$ *l.* in August 1800; the circulation was 17 million *l.*, the bullion 3891780*l.* in 1802.‡ The number of inconvertible notes increased rapidly; the amount of gold in the Bank decreased; so that a pound of the mixed inconvertible paper and the gold currency would no longer purchase the same amount of commodities as the previous currency of the precious metal and convertible paper. The issue of paper was a ready way of borrowing money on immoveable property, and on anticipated profits; and by putting current capital in the hands of employers, with much, with little, or with no capital, facilitated every kind of speculation, which it must be admitted was carried on with energy, and was on the whole successful during the war. The poor suffered excessively in the transition year of 1801, when, according to Arthur Young, a labouring man in Bury (Suffolk) required 26*s.* a-week to purchase the same amount of wheat, malt, butter, cheese, and tobacco as he could procure in early life for his wages of 5*s.* a-week.§ After wages had been raised,

not to fall again during the war, the decline in the price of wheat in 1802 and 1803 was a sensible relief to the labouring population, and accounts to a certain extent for the excess of marriages in 1803. Political events contributed to the same results. Napoleon had won the battle of Marengo in 1800; our expeditions to Cadiz and the Ferrol failed; the Emperor Paul of Russia revived the armed neutrality of the northern powers against England; and laid an embargo on British shipping, which interfered with the supply of corn from the Baltic. Mr. Pitt's popularity was waning; there were the debt, the taxes, the failures of expeditions, the triumph of the inveterate foe over him, and—what was worse—the dearth. The king inflexibly refused to concede the Catholic claims, and Mr. Pitt resigned in February, 1801. Events took another turn. The French were defeated at Alexandria (March 21st); the Emperor Paul was put to death; the Danish fleet was taken by Nelson, and in October the preliminaries of peace between Great Britain and France were signed. The peace of Amiens was definitively ratified on March 27th, 1802. The militia of Great Britain and Ireland were discharged to the amount of 71 thousand men; the army, which it was deemed necessary in times of no danger to keep up to 24 thousand men, was retained at 100 thousand. The yeomanry and volunteer corps continued their services.* The war with France broke out again in May 1803; Buonaparte had dared to assert that "Great Britain could not singly contend against France;"† and threatened invasion from the shores of Boulogne. The sea was traversed by 500 British fighting vessels; the land was covered with soldiers, and hundreds of thousands of volunteers, militia and yeomanry. The people were full of enthusiasm, valour, and confidence in 1803; which we have seen did not stop the great increase of marriages that began in the year of the peace of Amiens.

The number of marriages varied but little from 1804, when 171476 persons were married, to 1811, when 172778 were married. The years 1812–15, were a period of great fluctuation; in the four consecutive years 164132, 167720, 185608, 199888 persons were married. The excess of the last over the first year was 35756; the proportion was 5 marriages in 1812 to 6 in 1815. The baptisms rose from 301954 to 344931. The marriages in the metropolitan counties fell to 12137 in 1813, and rose to 14416 in 1815; in Bristol there was a corresponding fluctuation. In 1815 there was an excess of marriages in Birmingham; the marriages in the following year fell back and remained nearly stationary for 7 years. In Manchester the marriages increased from 1329 in 1812 to 2164 in 1815; they fell to 1691 in 1817, rose to 2022 in 1818, and to 2517 in 1822. The fluctuation of 1812–15 was felt all over the country. The marriages in the agricultural counties of the South Eastern division were 5881 in 1812, and 6968 in 1815; they then declined and were only 6783 in 1822. In Lancashire and Cheshire the fluctuation was much greater; the marriages were 8393 in 1812, and 12062 in 1815, 9972 in 1817, and 12557 in 1822. The average price of wheat in each of the 4 years 1812–15, was 129*s.*, 112*s.*, 76*s.*, 66*s.*, a quarter. The consumption of malt in the 4 years was 18, 22, 25, 26, million bushels. The corn crop of 1811 was deficient; July and a part of

* The Secretary-at-War, R. H. C. Yorke, in debate on Army Estimates, December 8, 1802, and Canning's Speeches, vol. ii. p. 43.

† British Declaration of War, 1803. Ann. Reg. vol. xlv., p. 734.

August, 1812, were cold and wet; the harvest was unpromising. Speculation was active, and the average price of wheat in August was 157*s.*, barley, 82*s.* The harvest weather proved unsettled, but not so wet, it was believed, as to injure the crops materially. There was no prospect of a foreign supply; the expenses of freight, insurance, and licences were enormous; and scarcity reigned on the Continent.* Every purchase of land after the issue of inconvertible notes had been profitable; rents were raised in proportion to the rise in the price of produce. The profits of those who had capital, and speculated in land, tempted those who had little or no capital free to enter the field, and the land-jobbers obtained depreciated paper with great facility from the banks. Tillage was extended over hitherto uncultivated lands; and additional capital was expended on soil under cultivation. The harvest of 1813 was abundant. The winter of 1813–14 is known as the severest of the present century; and the crops were somewhat injured, but the increased breadth of land, improved cultivation, the surplus of 1813, and the importation of foreign corn, brought prices down. Wages rose until 1810; they had nearly doubled since 1790. The carpenters, bricklayers, masons, and plumbers at Greenwich Hospital earned on an average 2*s.* 11*d.* a-day in 1790, and 5*s.* 6*d.* a-day in 1810.† The wages of agricultural labourers rose to something like the same extent. The inconvertible paper circulation was redundant and depreciated: in August 1812, the Bank of England had 23 million *l.* of notes in circulation and only 3 million *l.* in bullion; in 1813, the notes were 24828120*l.*, the bullion 2712270*l.*; in 1814, the notes were 28368290*l.*, the bullion 2097680*l.*; in 1815, the notes were 27248670*l.*, the bullion 3409040*l.*‡ The manufactures of the north were comparatively dull in 1812; only 63 million lbs. of cotton were imported in that year; the Nottingham riots, which began in 1811, continued in 1812; machinery was attacked in Lancashire and Cheshire; riot raged in the West of England on account of the high price of provisions. In 1812, France began the war with Russia: and on June 18th, America declared war against England, news of the revocation of the Orders in Council of January 7th, 1807, and April 26th, 1809, in consequence of the abrogation of the Berlin and Milan decrees, not having reached that country. England declared war against America in October 1812. Mr. Pitt, who had died in 1806 was succeeded by Lord Grenville, by the Duke of Portland, and by Mr. Perceval, who was assassinated in 1812, when Lord Liverpool became prime minister. In 1813, a new charter, which partially opened the trade to the East Indies, was granted to the East India Company. Spain, from which the French armies were expelled at the close of 1813, offered a field to commerce; Russia, which had receded from the continental system by the Ukase of December 31st, 1811, saw the French invading army perish before the end of 1812; the War of Liberation went on in Germany during 1813, and on March 31, 1814, the allied armies entered Paris. The Sovereigns visited the Prince Regent in June, 1814. Napoleon's reign of 100 days ended at Waterloo, and the allied army entered Paris on July 5th, 1815. Peace with the United States was concluded on December 24th, 1814. "The peace discharged from the army and navy from 400 thousand to 500

* Tooke, vol. i. p. 319–33.
† Porter's Tables and Progress of the Nation. Wade, Brit. Hist., p. 1038.
‡ Appendix to Tooke on Prices, vol. ii. p. 381–2.

thousand persons, who had formerly been consumers, but who now became competitors in the market of productive labourers."* Many of the veterans, retiring on pensions, no doubt married.

The fluctuations in the marriages subsequent to 1815 and previous to 1842, were less extensive than any of those which have been noticed. The decline, however, from the year 1815 to 1817 was considerable; 199888 persons married in 1815, 183892 in 1816, and only 176468 in 1817. From the year 1817, the marriages increased progressively. 185558 persons were married in 1818, and 191142, 193666, 201736 in the three following years (1819–21). The baptisms, which rose from 301954 in 1812, to 314432 in 1813; 318806 in 1814, and to 344931 in 1815; fell to 330199 in 1816, increased very slowly through 1817, 1818, 1819, and rose to 343660 in 1820, 355307 in 1821, and to 372571 in 1822. The corn harvest of 1816 proved deficient in quantity, and inferior in quality, both in England and on the Continent. Prices rose from 66*s.* a quarter in 1815, to 78*s.* in 1816, to 98*s.* in 1817.† They fell to 87*s.* in 1818, and to 75*s.*, 68*s.*, 56*s.* in the three years ending with 1821. Notwithstanding the corn laws of 1815 a good deal of wheat was imported in 1818, and the harvest of 1820 was one of the finest and the most productive ever known. The wheat crop of 1821 was inferior in quality but not deficient in bulk; large quantities of the old wheat of 1820 were on sale. The prosperity of the period ending 1815 proved to have been partly artificial, and partly the result of great manufacturing and mercantile speculations for the supply of the opened Continent with goods, at prices which the people of the Continent, exhausted by war, had no means of paying. There was no profitable foreign market for the excess of imports, which rose from 25 millions (official value, which, to a considerable extent, denotes quantity) in 1812, to 33 millions in 1814: reaction began in 1816. The imports of silk, wool, coffee, hemp, tallow, flax, linseed, did not amount in 1816 to more than half the quantities imported in 1814.‡ The imports of cotton, however, rose from 60 million in 1814 to 94 million pounds in 1816. The annual revenue raised by taxes and paid into the Exchequer exceeded 70 millions in 1814 and in 1815; it fell to 61 millions in 1816, when the income-tax was in spite of the government repealed. The loss in 1816 from this source was only 2950000*l.*; the customs and excise revenue, when there was no reductions in the rates of duties save the tax on malt, fell from 41759340*l.* in 1815, to 34282320*l.* in 1816, and 32741687*l.* in 1817.§ The malt tax was reduced from 4*s.* 5¾*d.* a bushel to 2*s.* 5*d.* in 1816, and in consequence of the change of rate chiefly the tax fell from 5865607*l.* in 1815 to 4217260*l.* in 1816, and 2509818*l.* in 1817.‖ Wages in several employments fell slightly about 1816, 1817, but not in proportion to the increased value of money when the paper currency became payable in gold. The wages of handloom

weavers fell through the introduction of machinery from 25*s* a week in 1800 to 14*s*. in 1815, 12*s*. in 1816, 9*s*. in 1817, 5*s*. 6*d*. in 1829.* Labourers' wages also declined in 1818. The sum expended for the relief of the poor was 5724839*l*. in 1815–6, 6910925*l*. in 1816–7, and 7870801*l*. in 1817–8; when it gradually declined to 6959251*l*. in 1820–1;† which it will be observed was at a much less rapid rate than the decline in the price of wheat and of other commodities. Undoubtedly a part of the distress in 1816, 1817, was the result of the previous war expenditure, which on the army, navy, and ordnance amounted in the 14 years 1801–14 to 683 million *l*. In the 6 years 1809–14 the expenditure on the three departments was 58 million *l*. a year. The total funded and unfunded debt on the 1st of February, 1817, when the English and Irish Exchequers were consolidated, was 841 million *l*.; and the annual charge was 32 million *l*.‡ The debt contracted during the French war was 600 million pounds sterling, the annual charge of which was nearly 23 million *l*. The country slowly recovered from its prostration. The army was withdrawn from France in 1818. In 1819 the agitation was rife in which the demagogue Hunt played a conspicuous part; it was the year of the Manchester riots; the Six Acts passed; the policy of the Holy Alliance was carried out in England by Lords Sidmouth and Castlereagh; Bell, Lancaster, and Pestalozzi attracted attention to their schools; Owen's "socialism" gained some public attention. On January 20, 1820, George IV., who had been Regent since 1811, was proclaimed king; Queen Caroline came to England in June, and the Bill of Pains and Penalties presented against her was abandoned after great popular excitement in November. Spain revolted in 1820; and the revolutions of Naples and Piedmont broke out, but were suppressed by Austria. The Greek Revolutionary war commenced in 1821; and Napoleon died in May. George IV. was crowned in July, and then visited Ireland and Hanover; Queen Caroline died in August. On the whole the increase in the marriages from 1817 to 1821 bears out the opinion of those who consider that there was a great gloom at first and then a slow improvement in the prospects of the people during this period.

The variations of the annual marriages in the 7 years, 1822–1828, though not considerable in the kingdom, were extensive in the towns. In 1822 the number of persons who married was 197756, which is less than the number married in the previous year; 209446 persons were married in 1824, and 220856 in 1825; in 1826 the number fell back to 209882, rose to 214260 in 1827, and 222348 in 1828. The annual baptisms only varied from 369760 (in 1823) to 375053 in the 4 years 1822–5; in 1826 they amounted to 380413, in 1827 to 374186, and in 1828 to 392454. The marriages in the metropolitan counties increased from 14966 in 1822 to 17785 in 1825, and fell to 16447 in 1826. In Portsmouth and Bristol there was no increase; in Plymouth the marriages which were 660 in 1823 (nearly half the number in the year 1814) rose to 836 in 1825; in Liverpool the marriages which were only 1301 in 1822 rose rapidly to 1947 in 1825 and went on increasing; in Leeds there was a corresponding rise from 902 in the year 1822, to 1122

* Porter, Progress of the Nation, vol. ii. p. 253. These are the rates at Bolton.
† M'Culloch's Statistics of the British Empire, Art. Poor Laws.
‡ Ibid., vol. ii. p. 435, 3rd edition, 1847.

in 1825; and then a fall in 1826 to 888. The marriages in Manchester were 2517 in 1822, 3059 in 1825, and 2696 in 1826. Birmingham had perhaps suffered more from the declining demand for arms after the war than it had suffered when the fashion of buckles passed away in 1790.* The marriages were nearly stationary, and trade was apparently dull from the year 1816 to 1822; which happened to be the period in which cash payments were resumed by the Bank; and the coincidence contributed its share to the currency doctrines of the place. Birmingham, like other commercial towns, ever prone to speculative excitement, indulged its pent-up ardour now; the marriages rose to 1181, 1321, 1582, and 1832 in 1822–5, and fell to 1366 in 1826. In the agricultural counties and the kingdom generally, exclusive of the towns, the fluctuation in the marriages was inconsiderable in 1822–6. The price of wheat had been declining, and in 1822 fell to 45*s.* a quarter; which was 4*s.* above the average of the two previous centuries, but was half the average price (91*s.*) of the 10 years 1810–9. The price rose to 53*s.* 64*s.*, 69*s.*, in 1823–5; fell to 59*s.* and 57*s.* in 1826–7; rose again to 60*s.* in 1828.

The general reduction (not the fluctuation) in the prices of wheat and other commodities was the result of changes in the value of the currency. Bank notes, which are promises to pay at sight stated quantities of gold, after 1797 when though the Bank had other property it had little gold left, instead of being payable in gold at sight, were made payable six months after the signature of a definitive treaty of peace. They remained current money at a depreciated value; in 1810 the Bullion Committee sat, but no change was made in the law; after the peace gold flowed into the Bank, which had 7562780*l.* of bullion in August, 1816; in April and September, 1817, notices were given that the Bank would pay in specie; the bullion in the Bank was 11668260*l.* in August, 1817; but the Bank had increased the issue of notes nearly 3 millions. There was an immense importation of wheat in 1817 and 1818; and the bullion in the Bank coffers was reduced to 6363160*l.* in August, 1818, to 3595360*l.* in August, 1819: an Act was hurried through Parliament to "restrict" the directors from paying any longer in gold. In the same year Mr. Peel's Act passed for the gradual resumption of cash payments; and on May 1st, 1821, the Bank was prepared to meet its promises to pay in specie. The notes in circulation were reduced from 27 million *l.* in 1816, to 20 million *l.* in August, 1821, to 17 million *l.* in 1822; and only rose to 22747600*l.* in 1827 to fall to 21357510*l.* in 1828. The bullion in the Bank was from 10 to 12 millions, except in August, 1825, when after considerable importations of wheat, it was only 3634320*l.*, and August, 1826, when it was 6754230*l.*† Money of intrinsic value is depreciated when like any other commodity it becomes abundant. This was the case in the reign of Queen Elizabeth with the silver currency depreciated by the abundant supplies of metal extracted from the mines of America. The paper money, and of course all money,

* Birmingham is said to have commenced manufacturing "guns" in the reign of William III., who complained that he was obliged to procure them from Holland at great expense. "During the late French war 30000 stand of arms were supplied to the government monthly." Hutton's History of Birmingham, by Guest, p. 181, ed. 6, 1835.

† Tooke, vol. ii., pp. 382–3.

was partly depreciated during the war by the abundance of the issue; and partly from the risk of the paper ceasing to represent any value whatever. The Russian inconvertible paper money fell to a fourth of its nominal value, and the French assignats at one time were worth nothing. Though the English paper did not fall to anything like the same extent as the money of other countries in somewhat similar circumstances, the average prices of wheat and other commodities amidst great fluctuations prove that about twice as much money was required to purchase the same amount of produce, as sufficed for the purpose when bank notes were payable in gold. The change in the value of the currency standard at the beginning and the end of a long period produced great disturbances in property; and trades and speculations which had been carried on with borrowed money prosperously at first, were, in the end, disastrous and unsuccessful. The country however struggled on; the 3 per cent. Consols, after the death of Buonaparte in 1821, rose to 79 in 1822–3, and to 93 in the year 1824. The Bank lowered its discounts in 1822 from 5 to 4 per cent.; the 5 per cent. Consols were reduced to 4 towards the close of the year; and early in 1824 the Old 4 per Cents. were reduced to stock of $3\frac{1}{2}$ per cent. Enterprise was dormant; prices were drooping through the first 6 months of 1824. The new free-trade doctrines were inaugurated in March, 1824, by Mr. Huskisson's alterations in the laws relating to the silk trade, carried by the firm support of Mr. Secretary Canning and Mr. Secretary Peel. Lord Londonderry had committed suicide in 1822; Mr. Canning became Secretary of State for Foreign Affairs; and the Duke of Wellington went to the Congress of Verona to declare that to the interference of France in Spain, come what may, His Majesty would be no party.* The foreign policy of England was no longer adverse to liberty; France put down the constitution in Spain in 1823, when Mr. Canning appointed consuls to the principal stations in Mexico, Colombia, Buenos Ayres, and thus virtually recognized the independence of the Spanish Colonies of South America. Commercial treaties were to follow; and much was anticipated from the working of the mines of silver and gold by English machinery and capital. The new governments readily obtained loans in London. The imagination of the public was fired; and it is estimated that by the end of 1825 from 27 to 43 million *l.* sterling had been paid in instalments on foreign loans, mining shares, and other speculations. 243 schemes and new joint stock companies had been projected with an aggregate capital on paper of about 243 million *l.* A hundred more companies were advertised.† In passing the bills to enable joint-stock milk, brick, and other companies to sue and be sued by one of their officers, Lord Liverpool and Mr. Huskisson gave some warnings and sound advice, but declared on every occasion that the Government could not interfere. "If it turned out that the company was a mere bubble, no harm, that he (Mr. Huskisson) could discover, would be done by the facility thus afforded.‡ On June 2, 1825, the Attorney-General, Sir John Copley, moved for leave to bring in a Bill to repeal so much of the Act 6 Geo. I. c. 18, called the 'Bubble Act' as "relates

‡ Huskisson in Debate, February 28, 1825, and Speeches, vol. ii., p. 287.

to the restraining several extravagant and unwarrantable practices." Mr. Huskisson, in supporting the Bill which passed on the 18th, said that "parties would in future be enabled to enter into their speculations, without any other restriction than that which the Crown would exercise in pronouncing upon the utility and propriety of their designs, when applications were made for charters of incorporation."* The speculation extended to commerce, and the prices of almost all goods were enhanced: sugar rose from 30*s.* to 41*s.* per cwt., coffee from 59*s.* to 77*s.*, iron from 6*l.* to 11*l.* per ton, cotton from 8*d.* in July–November, 1824, to 1*s.* 5*d.* in June 1825. 149 million lbs. of cotton were imported in 1824, and 229 million lbs. in 1825; 23 million lbs. of wool in 1824, and 44 million lbs. in 1825. Unlike some of the other articles of speculation, these found employment for many hands in the manufacturing districts. The public engaged in the commercial speculations as well as in the joint stock companies. "Crowds of individuals," says the Annual Register for 1824, "of every description; the credulous and the suspicious, the crafty and the bold, the raw and experienced, the intelligent and the ignorant, princes, nobles, politicians, placemen, patriots, lawyers, physicians, divines, philosophers, poets, intermingled with women of all ranks and degrees, spinsters, wives, and widows, hastened to venture some portion of their property, in schemes of which scarcely anything was known except the name." Many of the small annuitants whose incomes had been cut down by the lowering of interest and the reduction of the dividends of stock, were probably tempted by the promised high rates of profit to retrieve their former incomes. The 100*l.* shares of the Anglo-Mexican Company on which 10*l.* had been paid, ran up to 33*l.* premium in December, 1824, and to 158*l.* premium in January, 1825; the *Real del Monte* shares, on which 70*l.* had been paid, went up to 550*l.* premium in December, and 1350*l.* premium in January, 1825. The spirit of speculation extended to America and to France. In Paris, where there is always a disposition to generalize, a "*Société commanditaire de l'industrie*" was constituted, to supply funds for every enterprise, commercial, agricultural, or manufacturing! As the year advanced, calls for payment fell in; these were immediate; the returns, however certain they were still held, seemed to grow remote. A pause ensued in March and April; the calls became pressing, the holders had no resource but to endeavour to sell, and in May and June the prices declined rapidly. The South American loans, and the Mexican mining schemes entailed the loss of nearly the whole of the sums subscribed. The *Real del Monte* mining shares fell to a discount of 20*l.*; some of the other companies, on a solid basis, such as the Manchester and Liverpool Railway Company, the Alliance, and other Insurance Companies survived; many were abandoned, after a sacrifice of the whole or a part of the deposits. The credit of the country was shaken. There was a run upon the banks, and nearly 70 banks suspended payment in the single month of December, 1825; mercantile embarrassment was most felt in the two following months. The Bank of England issued one and two pound notes, and at the request of the Government consented to make advances on the

* House of Commons Debate, June, 2, 1825; Huskisson's Speeches, vol. ii., p. 423.

security of goods to the extent of 3 million *l.** Confidence was restored after the failure of tottering houses, and the bank had only to advance 400000*l.* in the course of 1826, after which few traces of the commercial panic remained. As it usually happens, while the exports and imports of 1824, 1825, were quoted in proof of the general prosperity, for which many were willing to take credit, directly or indirectly; few cared to admit having had any share in producing the inseparable collapse. The Bank was generally and justly blamed for extending its issues of paper, while its bullion was diminishing in 1824, and in the beginning of 1825. The revenue raised by taxation, and paid into the Exchequer, was 57672999 *l.* in 1823, and 59362403*l.* in 1824. Mr. Robinson, when bringing forward the budget in 1824, portrayed the general prosperity of the country in glowing colours; the contentment and the thriving condition of all classes, were the leading topics of the King's speech, in February, 1825; in February, 1826, the Royal speech referred to the pecuniary crisis, which it declared was unconnected with political causes, but originated in great part, "in the conduct of individuals, whose sufferings might afford the best security against its recurrence."

This fit of speculation is in many respects instructive. It was one of the most violent that the country has experienced: many sudden fortunes were made, and matrimony was among other things a favourite speculation; yet the persons married throughout the country in 1825 present an increase, but not exceeding 220856. The truth is that the price of provisions was high, and the movement was chiefly a gambling in shares and loans which after all is restricted to a comparatively small class of people in towns; whereas the recent railway speculation gave employment and wages to thousands of the labouring population.

The country recovered from the depression of 1826; and as has been seen 222348 persons married in 1828. The political events in the next period were important. Lord Liverpool had an attack of apoplexy in 1827; Mr. Canning became Prime Minister on April 10th; after Mr. Canning's death on August 8th, Viscount Goderich was Premier; on January 25th, 1828, the Duke of Wellington was at the head of the Government, and Sir Robert Peel was Home Secretary. Lord John Russell's motion for a repeal of the Test and Corporation Acts was nevertheless carried on February 26th. The battle of Navarino was fought in 1827, the Egyptian army evacuated the Morea in 1828, and the French army commenced the evacuation of Spain, which they had occupied since 1823. These political events were followed by others of greater excitement. The Catholic Emancipation Bill passed in April, 1829; George IV. died, and William IV. ascended the throne on June 26th, 1830; Algiers was taken by the French; Charles X. and the royal family were expelled from France by the three days' revolution in Paris (July 26, 27, 28); and Louis Philippe was proclaimed, in August, King of the French. Revolutions or political changes followed in Belgium, Brunswick, the Papal States (suppressed by Austria), in Switzerland, Saxony, Poland, and Denmark. The Liverpool and Manchester Railway was opened on September 15th, 1830, when Mr. Huskisson was unfortunately killed. Earl Grey became Prime

* Tooke, vol. ii, p. 169.

Minister in November, 1830; the English Reform Bill passed in June, 1832. In 1833 the Chinese trade, which had been a monopoly, was thrown open to all British subjects. Isabella became Queen of Spain in 1833; and Don Miguel withdrew from Portugal in 1834. Lord Melbourne succeeded Earl Grey as Prime Minister in July 1834; Sir Robert Peel, called from Italy, became Premier in December, and Lord Melbourne returned to office in April, 1835. Lord John Russell introduced the Bill for reforming municipal corporations in June. The German Commercial League was formed in May, 1835; the Thiers Ministry appeared February, 1836, in the *Moniteur*; and in a discussion on the treaty of Unkiar Skilessi, reference was made to the power and encroachments of Russia. 5000 men were added to the British navy in March, 1836; the Irish Constabulary Bill, under which the police are appointed by the Lord Lieutenant, was introduced by Lord Morpeth; the Irish Tithe and Municipal Bills, and the Bill for governing charitable trusts in England failed to pass the House of Lords. Revolutionary movements broke out in Spain, Portugal, and Switzerland; M. Thiers resigned in September, 1836.

The average price of wheat rose from 57*s.* per quarter in the year 1827, to 60*s.* in 1828, and 66*s.* in 1829, 64*s.* in 1830, and 66*s.* in 1831; in the four following years 1832–5, the price fell to 59*s.*, 53*s.*, 46*s.*, and 39*s.*; but rose to 49*s.* and 56*s.* in 1836 and 1837. The harvests of 1828–31 were deficient, those of 1832–5 were abundant: Mr. Hope, a Scotch farmer, stated that in the former periods 175 acres of land produced 385 quarters of wheat, in the latter 657 quarters, over and above the seed.* The crops throughout the country did not of course vary to the same extent; but in 1829–30–31, there were 1261000, 1495000, and 1090000, quarters of wheat imported for home consumption; in 1832 only 166000 quarters were imported; in 1833–6 the importation was insignificant.

In 1829 trade was depressed, wages reduced, and the weavers were in great distress; there were riots at Manchester. The King's speech (1830) noticed the *partial distress* among the agricultural and manufacturing classes. Incendiary fires, and the destruction of machinery were prevalent in Kent and other counties (1830). A committee of the House of Commons on agricultural distress reported in 1833 that distress existed, but that the wages of the agricultural labourer gave him a greater command over the necessaries and conveniences of life than at any former period. Committees of the Lords and the Commons sat again in 1836. Wheat was in January at 36*s.* the imperial quarter; the Committee of the Commons could not agree to a Report. The consumption of wheat in 1835 is said to have been abundant from the full employment of the people at high wages. A Committee of the House of Commons in 1833 inquired into the State of Manufactures, Commerce, and Shipping. Mr. Lewis Lloyd "never knew trade at any former time in so sound a state;" and evidence to the same effect was given by Mr. Gurney, James Cook, Joshua Bates, Larpent, Shaw, Kirkman Finlay, the principal commercial authorities of the day. The manufacturing and mining interests experienced unparalleled prosperity in 1834 and 1835. The London and Birmingham Railway Act passed

* Tooke, vol. ii. p. 237.

in 1833: the shares which had been depressed rose to a premium after the success of the Manchester and Liverpool line was witnessed. Agricultural labourers found employment on the railways; swarms of new projects started up.

Joint stock banks were formed to some extent in 1835, after the Bank of England was deprived of a part of its monopoly; in 1836 many new banks and new branches were established, and proceeded with activity. They facilitated speculation by advances of their paper, and the Bank of England blameably increased its "securities." Over-trading raged in America. Mr. Poulett Thomson in his place in the House of Commons said it was impossible not to be struck with the spirit of speculation abroad; he found that in May, 1836, from 300 to 400 Joint Stock Companies had been advertised with a capital on paper of 200 millions.* In 1825, London was the centre of speculation; in 1836, it was elsewhere;—in Liverpool, Manchester, and other towns. Many of the Companies were got up by speculators, for the sole purpose of selling shares. The signal of collapse was given by the failure of the Agricultural Bank of Ireland in November, 1836. The Bank of England assisted the Manchester Northern and Central Bank in December, the large American houses in February and March, 1837. It was in vain. Commercial credit fell to its lowest point of depression in the first half of the year 1837.

The official *value* (which expresses quantity) of the exports of British and Irish produce and manufactures from Great Britain, rose progressively from 51 millions in 1827 to 60 millions in 1830 and 1831; it then from 1832 ran up rapidly to 65, 70, 73, 78, 85 millions in 1836, but fell down to 72 millions in 1837. The imports followed a somewhat similar course. The cotton wool entered for home consumption was 204 million lbs. in 1829, and 270, 273, 259 million lbs. in the three next years, (1830–2); 294, 303, 326, 364, and 368 million lbs. in the 5 years, 1833–7. Of wool, 30 million lbs. were imported in 1828, and 64 million lbs. in 1836; the importation in 1837 fell to 48 million lbs. Of silk, 3 million lbs. were imported in 1829, and 6 million lbs. in 1836.

The fluctuation of the marriages in the nine years 1829–37 appears to express very accurately the condition and the hopes of the people. The year 1829 was a year of depression; and only 208632 persons married. In the five years 1830–4 the number rose to 215438, 224588, 233208, 240254, and 243768. In 1835, 239196 married; in 1836, 241698: in 1837, only 232042† married. The fluctuation in the first 4 years 1829–32 kept pace with the progress of political events; the increase in 1833 and 1834 was coincident with the abundant crops of wheat, the cheapness of provisions, and the development of commerce. It is probable that the increase would have proceeded in 1835–6 at the same rate as the trade, employment, and speculation, had it not been

* A list of 300 projected companies, with a nominal capital of 135248700*l.* in 2538600 shares is given in the Appendix No. 4 to Report from Select Committee on Joint Stock Companies, 1844.

† The new Marriage Act came into operation July 1st, 1837. The persons married according to the rites of the Established Church were 228748 in the year 1837; to these are added 3294 persons married under the new Act, and not entered in the Church returns.

for the great change effected in 1834 by the New Poor Law, which came rapidly into operation in 1835 and 1836. The sum of 7037000*l.* was expended in the relief of the poor in the year 1831–2, 6791000*l.* in 1832–3, 6317000 in 1833–4. The sum expended in 1834–5 was 5526000*l.*; in 1835–6, 4718000*l.*; in 1836–7 only 4045000*l.* And in 1837 the price of bread rose rapidly, while trade was depressed, and speculation sat exhausted in the midst of ruin. It will be seen in Table II. that the marriages increased without scarcely any interruption in the metropolitan and the manufacturing counties through the first 8 years, and then suddenly declined in 1837;* thus in Middlesex and Surrey the marriages in the years 1829–36 were 16468, 16941, 17101, 17155, 17873, 18360, 18202, 18553, and in 1837 only 17411; in Cheshire and Lancashire during the same years, 13876, 14548, 14586, 15767, 16257, 16931, 17091, 17861, and in 1837 only 15300; in Yorkshire, during the first 8 years, 10158, 10544, 10998, 11597, 12088, 12374, 12496, 12697, in 1837 only 11706. In the agricultural counties the series is different; thus in Hertford, Bucks, Oxford, Northampton, Huntingdon, Bedford, and Cambridge, during the years 1829–33 the marriages were 6484, 6781, 7004, 7342, 7411; and in the 4 years following 7245, 6703, 6708, 6360. In Essex, Suffolk, and Norfolk, the marriages in the 9 years 1829–37, were 6766, 7103, 7516, 7499, 7648, 7635, 6799, 6582, 6518.

The marriages show that the depression of the country, observed in 1837, was soon dispelled. In 1839, there were 246332 persons married; from that year the numbers slowly declined, through 1840 and 1841; in 1842 only 237650 persons were married. The price of wheat gradually rose from 56*s.* a quarter in 1837 to 65*s.* in 1838, and 71*s.* in 1839; it then slowly fell to 66*s.* in 1840, to 64*s.* in 1841, and 57*s.* a quarter in 1842. It will be observed that in this period the marriages declined at the same time that provisions grew cheaper. The South Eastern and the South Western Divisions were the only Divisions in which the marriages in 1842 were more numerous than the marriages in 1841 (*see* Table II.). The decline from 1841 to 1842 in the other Divisions was general. In Cheshire and Lancashire there were 17704 marriages in 1841, and 16559 in 1842.

The importations of wheat in each of the 5 years, 1838–42, were 1716000, 2500000, 2012000, 2212000, 2625000 quarters for home consumption. The stock of bullion in the Bank, which was nearly 10 millions in 1838, was reduced to 3 millions in 1839, about 4 millions in 1840, 5 millions in 1841; it rose again to nearly 10 millions in 1842.† And the notes in circulation, which had been 17 or 18 million *l.* in 1839, 40, 41, were raised to 20 million *l.* in 1842.† The United States Bank suspended cash payments in September, 1839. The exports, however, increased. In the 5 years, 1837–41, the official value of British and Irish produce and manufactures exported from Great Britain was 72, 92, 97, 102, and 102 million

* Some allowance must be made in reading Table II., page 49, for 1647 marriages of Dissenters, &c., in the latter half of the year 1837, as they are not included in the divisional returns.

† The form of the Bank Returns has varied. The numbers here given represent the state of things about the end of August in each year. The Returns will be found more in detail in Tooke on Prices.

pounds. The declared value of the exports was 41912000*l.* in 1837, and 51218000*l.* in 1841. Many of the goods were required to pay for the corn imported. There were large importations of cotton, wool, and silk. The London and Birmingham Railway was opened throughout in 1838, the Great Western in 1841. The Great Western steam-ship had traversed the Atlantic in 1838. The Penny Postage came into operation in January, 1840. The interest of money was low, and speculation languid, in 1842. The political events of the five years were various and important. After the accession of Her Majesty in 1837, the insurrectionary riots broke out in Canada, and were suppressed by Sir F. Head. The insurrection which broke out in Lower Canada was suppressed by Sir John Colborne in 1838. A liberal treaty of commerce, between Turkey and England, was entered into in the same year. The citadel of Ghizny was stormed by the Indian army under Sir J. Keane, in July, 1839; Cabul was entered in August. In the fifteen days from Christmas Day, 1841, to January 8th, 1842, the army in Cabul was exterminated. Sale and Nott gallantly defeated the Affghans in April and May, 1842. Captain Elliot was arrested at Canton in April, 1839. The Emperor of China prohibited all commerce with the English, in January, 1840. In June, Canton was blockaded; in May, 1841, it capitulated. In August, 1842, a treaty of peace was signed at Nankin by Sir Henry Pottinger. St. Jean d'Acre was bombarded by Sir Robert Stopford in November, 1840. The body of Buonaparte was, by permission of the British Government, removed from St. Helena in December, 1840. The fortifications of Paris were commenced in 1841. In the same year Vice-President Tyler became President of the United States. The Chartists, on November 4, 1839, attacked Newport, which was successfully defended by Mr. Phillips, the Mayor, and 30 soldiers. Disturbances occurred also in 1840. In August, 1842, the cotton-spinners at Ashton-on-Lyne "turned out," in consequence of the reduction of wages, and their example was followed in all the manufacturing districts of England and Scotland. The only other important series of facts to notice in this period are the Returns of the Revenue. The expenditure exceeded the revenue in each of the 7 years ending in 1843. At the close of the last war the price of wheat fell to 79*s.* a quarter in 1816; and the House of Commons in the following year struck off the Income Tax in opposition to the Ministry. 17 million *l.* of taxes were remitted at one blow, and the finances of the country were left in an unsatisfactory state. The price of wheat rose, and in 1819 taxes yielding nearly 3 million *l.* were imposed; but in 1822 the average price of wheat fell to 45*s.*, and in the five years 1822–26 taxes to the amount of 13 million *l.* were remitted; in 1830, under the Duke of Wellington's administration 4 million *l.* of taxes were remitted, 700000*l.* imposed; in the 3 years, 1831–33, when the price of wheat was falling, taxes to the amount of 3867000*l.* were remitted; in the 4 years, 1833–36, the crops were abundant, prices were low, no wheat was imported, and the remission of taxes went on; 2065000*l.* were remitted in 1834, 1630000*l.* in 1835, and 1022000*l.* in 1836. This was a period of great commercial excitement, bread was cheap, and the population had therefore more money to expend on malt, hops, spirits, wine, tea, coffee, sugar, and tobacco, from which more than 27 millions of revenue were derived. The fall of the price of wheat affects the rents of land, and this, with the

apparently flourishing state of the revenue, led to such a reduction of taxation, that in the depression of 1837 and the following years, the income was less than the expenditure. No allowance had been made for the inevitable reaction. The events in Canada, in the Mediteranean, and in Affghanistan, led, at the same time, to an increase of the military and naval expenditure; so that in 1842, while the revenue was 50980000*l.* the expenditure was 55224000*l.* Sir Robert Peel, who came into office in September, 1841, proposed the new tariff and the Income Tax in 1842, and in 1844 had a surplus revenue. It was, as we have seen, followed by a period of one of the greatest fluctuations in the marriages that has occurred in England for nearly a century. The marriages in the whole kingdom rose from 118825 in 1842 to 143743 in 1845. The marriages in London fell from 18530 in 1840 to 17826 in 1842; they rose to 21770 in 1845. In Birmingham and Aston the marriages were 1379 in 1842 and 1930 in 1845; in Manchester 3664 in 1842 and 5376 in 1845; in Liverpool 3048 in 1842 and 4243 in 1845; in Leeds, 1410 in 1842 and 1881 in 1845; in Newcastle-upon-Tyne 891 in 1842 and 1110 in 1845; in York 446 in 1842 and 527 in 1845. In the South Eastern, South Midland, Eastern, and South Western Divisions the increase of marriages was steady but not considerable. In the Western Division, in Cheshire, Lancashire, and Yorkshire, where the work for railways was most active and most was anticipated from the alteration of the tariff, the increase of marriages was striking.

The number of marriages in a nation perhaps fluctuates independently of external causes, but it is a fair deduction from the facts, that the Marriage Returns in England point out periods of prosperity little less distinctly than the funds measure the hopes and fears of the money market. If the one is the barometer of credit, the other is the barometer of prosperity, present in part, but future, expected, anticipated, in still greater part.

(1.) As a war diminishes the marriages by engaging great numbers of men at the marriageable age, an excess of marriages naturally follows peace, when the militia, soldiers, and sailors, with small pensions, are discharged. This is seen in the peace of Paris, the peace of Amiens, and the peace at the close of the last war. Manufactures and commerce in England have hitherto entered into renewed activity on the cessation of wars: markets are thrown open, and great numbers of people obtain employment, which has more to do with the increase of marriages than the mere discharge of great numbers of men from the public service and pay.

(2.) The growth of domestic animals is affected by comparatively few vicissitudes; and there is little fluctuation in the supply of meat. But the crops of grain in a country vary largely; the prices vary still more; while the wages of the bulk of the population have a limited range. Years of plenty are years of prosperity for the people; and the marriages increase, with a few exceptions, when provisions are cheap. As abundance is one of the causes that multiply, dearth is one of those that diminish, the number of marriages.

(3.) The establishment of new, or the extension of old, employments promotes marriages: the cotton manufactures, the canals of the last

century, the railways of the present day, are examples. In fact, an increase in their incomes is taken by the generality of people for the beginning of perennial prosperity, and is followed by a multitude of marriages.

(4.) The periodical epidemics of speculation are accompanied by an increase of marriages. Great numbers of people, of all classes, fancy themselves growing wealthy while shares are rising; and in the gambling transactions of the Stock Exchange, if some are ruined, others are enriched. The apparent improvement in the position of the small capitalists, the increased wages of the working classes, where the speculation involves the employment of labour, and perhaps the spirit of speculation itself, lead many to embark in matrimony.

(5.) The nation is sometimes extraordinarily sanguine. A statesman of genius, like Lord Chatham, at the head of affairs, produces the same confidence in a country as the presence of a Cæsar, Napoleon, or Wellington, on an army. Great victories, the joy of peace, large financial or political measures, new discoveries in science, new applications of the powers of nature, the opening of kingdoms and continents to commerce, raise public feeling to a state of exaltation long before the slightest improvement in the material condition of the population is realized by those measures that are likely to have ultimately that effect. Such periods of public exaltation are almost invariably accompanied by an increase in the number of marriages.

In fine, the great fluctuations in the marriages of England are the results of peace after war, abundance after dearth, high wages after want of employment, speculation after languid enterprise, confidence after distrust, national triumphs after national disasters.

The causes that increase and the causes that diminish marriage differ in energy; they admit of various combinations; they sometimes neutralize each other; and the marriages express the result of all those forces on the public conduct of the people.*

I shall now inquire very briefly into the value of the Marriage Returns, and of other measures of public prosperity. An increase in the consumption of malt, hops, wine, spirits, coffee, tea, sugar, and tobacco, from which about 28 million *l.* of the revenue of the country are derived,

---

* Take only three elements, for example—peace, abundance, high wages; and their three opposites, war, dearth, low wages—then there are eight combinations possible:—

Peace, abundance, high wages;	War, abundance, high wages;
Peace, dearth, high wages;	War, dearth, high wages;
Peace, abundance, low wages;	War, abundance, low wages;
Peace, dearth, low wages.	War, dearth, low wages.

Of the eight possible combinations, there is one in which the causes all operate in increasing, one in which they all operate in decreasing, the marriages. If p, a, w were the factors expressing the effects of the three first elements, as compared with the average state of things, taken for *unity*, and $\frac{1}{p}, \frac{1}{a}, \frac{1}{w}$ the factors of their three opposites, the eight following formulæ would, if there were no other causes in operation, give the results for any year:—

$$p\ a\ w + p\ a\ \tfrac{1}{w} + p\ \tfrac{1}{a}\ \tfrac{1}{w} + \tfrac{1}{p}\ \tfrac{1}{a}\ \tfrac{1}{w}$$
$$p\ \tfrac{1}{a}\ w \qquad \tfrac{1}{p}\ a\ w \qquad \tfrac{1}{p}\ \tfrac{1}{a}\ w$$

Should there be six elements and their six opposites, the possible combinations would be $2^6 = 64$. These factors themselves would vary, and it is evident that the subject does not admit at present of strict mathematical treatment.

implies an increase in the expenditure and wages of the working people; as an increase in the imports of raw silk, cotton, wool, tallow, and timber, is an evidence generally of more active manufacturing enterprise. The Marriage Returns express the same facts. Now it is invariably observed, that any extraordinary increase of marriages, or any augmentation in the consumption either of the comforts, stimulants, or necessaries of life, not always within the reach of the great mass of the population, is followed by a corresponding falling off. The ship raised on the crest of the wave is not surer to plunge than this prosperity to subside. "Eating and drinking, marrying and giving in marriage," preceded a great historical catastrophe; and it is evident from the facts already adduced, that though a nation may be rising, it never behoves the wise and sober to be more on their guard, more alert, or more liberal in giving good counsels, than when thousands of the people are setting up in business, establishing families (for every marriage is the foundation of a family), and consuming an unusual amount of luxuries. This "prosperity" may be the dawn of progress, or the riotous forerunner of ruin. To distinguish the two kinds of "prosperity" is difficult, but not impossible; and in the national life they are always intermingled in different proportions at different times. The usual course in the crisis appears to be this. Capital accumulates until the outlay of the surplus in the ordinary business of the country yields little profit. The thrifty grocer, the farmer, the cotton-spinner, or the merchant, with his routine system and limited market, finds that his business will bear no more capital. Ingenuity is taxed to discover new sources of employment and production. The discovery, after many failures, is made. The capital, invested in the new mines, factories, cultivation, commerce, yields large profits. This gets noised abroad. More capital is invested in similar undertakings, or undertakings suggested by the new principle. Capital is then drawn from all employments at low profits. Expectations are raised. Tradesmen and merchants take capital from their usual business to embark for the new El Dorado. Professional men and annuitants anticipate and invest part of their incomes. The public enthusiasm is fanned by unprincipled sharpers. Scrip and paper money afford extraordinary facilities for speculation. Men with no capital buy and sell shares; men with little capital go beyond their limits; and men of large capital undertake responsibilities to which no capital is equal. Large numbers of people are employed. Wages, salaries, fees, fly about in every direction. "Eating and drinking, marrying and giving in marriage," go on at an accelerated rate. All this series of facts is in the rough party estimates of debate confounded with substantial progress under the name of "prosperity." It is evident, however, that the new source of production remains through all; that the first investments are exceedingly profitable; and that in the end the speculation becomes a pure destruction of capital; for a nation, like an individual, can run through its property by the waste of the holders, their want of prudence, their improvidence in paying wages which the profits of production will not repay, or by the extravagant expenditure of wars, the only great speculations in which governments have hitherto engaged. The farmer may be running out his land, the grocer reducing his stock, the cotton-spinner letting his machinery fall to pieces for want of repairs, the carpenter selling his tools, while there is an increase in their expenditure, or even their income,

if by this term is understood the surplus of the cash receipts over the outgoings of ordinary business in any given year. The capital of a country—its fertile soil—its horses, cattle, and provisions—its machinery and tools—its houses, ships, buildings, furniture, goods, merchandize, silver, gold—the slow accumulations of a thousand years, each "bearing fruit in its kind," with skill and labour eternally renewing and extending itself—may be wasted year by year, brought low, and destroyed; and while the destruction is going on, the expenditure of the nation may be increasing instead of diminishing. The prodigal is converting its estate into an annuity for a short term.

The reason of the depression that invariably follows a period of prosperity is in the nature of things. Wealth may be suddenly destroyed; but a sudden creation of wealth is impossible; for it is the produce of skill and labour, and though skill moves *per saltum* in inventions, human labour advances slowly, as generation follows generation. Where a new force like steam is placed at man's disposal, its introduction to profitable uses is slow. But in the crisis of "prosperity" a nation believes itself rich that the year before found it a hard thing to live; and on this high pitch regulates its expenditure. For man's course is determined by opinion; and opinion uninformed by science is full of delusions, wayward and prone to exaggeration. The happy agriculturist has been known to be disturbed by the fertility of Egypt, shake before the rustle of the wheat waving over the plains of Hungary or Russia, and be overwhelmed in imagination by the endless produce of the vast valleys of the Mississippi. The "commercial mind," on the other hand, full of imagination, is excited by the sudden opening of great territories to trade: witness the effect of the treaty with France in 1787; the opening, as it is called, of the Continent of Europe, at the peace of Amiens, and the peace of 1814; the opening of South America by Mr. Canning in 1823–5; the opening of Asia recently through the Indus and China. Commerce sees these vast continents covered with customers; sets hands to work, freights her ships, and, as she expects, finds millions in want of her wares, and quite willing to accept them; but without anything of value that they are able or willing to give in exchange for the new untried commodities; men, whether civilized or savage, having generally ways enough to dispose of their income, and little left to experiment in new pleasures. The merchandize becomes a drug. It is sold for a fraction of its cost price, or given away; and in perishing often feeds the germs of a distant future trade. Some native commodity is displaced, or the industry of the population is stimulated to produce exchangeable articles for a profitable commerce.

In the invariable decline following an increase of marriages they have never fallen back to the original numbers. Population has increased faster than the marriages. The same may probably be said of the energies and productive powers of the country. And if it is true that depression always follows "prosperity," the converse is equally true. The agriculture of England, by improvements in its methods, and its extension in breadth to lands before uncultivated, has, through good and bad seasons, dearth and abundance, steadily advanced. Manufactures, aided by new powers and machines, have made still more progress; and commerce, through periods of languor and paroxysms of speculation, has increased, enlightened by science, having at command multiplied facilities

of receiving information, as well as new agents of intercommunication with the world. And thus England has hitherto held on her way through ages: sometimes prosperity has shone on her, and all the winds have been favourable; then heaven has been clouded, or the gulf-streams of time have carried her aside, or adversity has hung over her; but, amidst all the vicissitudes and chances of the voyage, her true onward glorious course has still been held.

Mr. Pitt, in 1786, estimated the population of England and France at 8 millions and 24 millions. The power and wealth at the disposal of both countries has increased in a faster ratio than their population. The population of the United Kingdom was about 16 millions, of France 27 millions, in 1801. In 1846 the population of the United Kingdom was about 28½ millions; of France about 35 millions. The increase in the relative strength of this empire, from the time of Chatham and Pitt, when England had to hire Hessians or other mercenaries, is immense. At the present time there are not less than 7 millions of men in these islands; and 5 millions of men well able to bear arms.

It is a fact well worthy of attention that the proportion of marriages to the female population has progressively diminished from 1·716 per cent. in the 10 years 1796–1805, to 1·533 per cent. in the 10 years 1836–45. The proportion of marriages to the population in each period of 10 years is shown in Table (*f*). While the marriages increase in prosperity, it is a general rule that the proportion of marriages to the population decreases as the mortality decreases; and that marriage takes place later as life becomes longer. The table (*g*) contains the estimated population on the

(*f*) ENGLAND.

first day of every 10th year, from 1841 back to 1761. The first five statements of the female population (1801–1841), are derived directly from the censuses; to the males returned, a proportion of the army, navy, and merchant-seamen was added, so as to make the proportion of males the same in England as in the United Kingdom. The population increased 0·283 per cent, faster than the marriages through the period 1801–1841; the rate of increase of marriages, in 1761–1801, was raised to that extent, and then taken to represent the increase of the population in the same period. According to this calculation, which is corroborated by others, the population of England was under 6 millions in 1761. The proportion of marriages in the 10 years (1756–65) was 1 annually in 103 of the population.

Mode in which the Marriages were performed.—In the year 1845, of the 143743 marriages, 129515 were performed according to the rites of the Established Church; 14228 not according to the rites of the Church. The proportions are nearly as 9 to 1; or, the marriages at the Church are 90·102 per cent. of the whole number in England. The marriages after banns were stated to be 92867; by licence 16013. The marriages after notice to the Superintendent Registrars were only 1706. The numbers are increasing; but the public probably are not yet aware of this provision of the Registration Act. In 18919 cases it was not stated by the officiating clergyman whether the marriage was by licence or banns; the oversight is, I hope, in the way of being rectified. The publication by banns in the country, and in small towns, answers every purpose for which it was intended; but in large towns, and particularly in London, the hurried proclamation in one of its hundreds of churches of a long list of the names of persons intending to marry, in the middle of Divine service, is a very imperfect notice. The system no doubt admits of improvement. Again, there are about 18000 licences granted by Doctors' Commons and by country surrogates every year. The usual cost of the licence at Doctors' Commons is 2*l.* 12*s.* 6*d.* There is 10*s.* 6*d.* additional for minors, and in the country, surrogates, it is said, obtain higher fees. At only 2*l.* 12*s.* 6*d.* the tax on 18000 licenses is 47250*l.* a year. The stamps on each licence are 12*s.* 6*d.* Deducting this sum, the licenses to marry yield at least 36000*l.* a year. The expense of granting licences in a manner the most useful and convenient to the public would not be considerable; and it is not easy to see why the surplus revenue derivable from the tax should not go into the public treasury when a portion of the expenses of the registration of births, deaths, and marriages is paid out of the Consolidated Fund. The aggregate amount of charges for the General Register Office, at which all the returns of the country are examined, indexed, and analysed, and the Act is administered, was 13794*l.* in 1846; and the 621 superintendent registrars received 9097*l.* for examining certified copies. After discharging the expenses of the civil registration, defrayed by the Consolidated Fund, and the cost of the decennial census, a large surplus would be left, out of 47250*l.* for licences, to go to the public revenue of the country. And this would not interfere in the slightest degree with the marriage fees; which would continue to be paid to the officiating

clergyman, as they are now, quite independently of the charge for the licence.*

There were 9997 marriages in registered places of worship; 3977 in superintendent registrars' offices; 180 marriages according to the rites of the Jews, and 74 marriages between Quakers: 6287 men, and 19376 women married, were under 21 years of age; of the men married 4·37 per cent., of women 13·48 per cent. were minors; 18176 or 12·64 per cent. of the men were widowers, 12369 or 8·60 per cent. of the women were widows.

47665 of the men, and 71229 of the women who were married in 1845, signed with marks in the marriage register. 33·2 per cent. of the men, and 49·6 per cent. of the women, did not write their names. Two in three of the men, and only one in two of the women in the country at the marriageable age wrote their names. In explanation of the value to be attached to this test of education, I quote a passage from my last Report:—"It is probable that a few women, able to write letters intelligible to their friends, signed with marks; but this simple test leaves little doubt that 33 in 100 of the men, and 49 in 100 of the women of England, at the marriageable age, are either quite unable to write, or write very badly. Some objections have been raised against this return as a test of the state of education; and it should be taken for no more than it is worth. I have already stated that a certain number of the women able to write, either from timidity or from other motives, may not have written their names. Upon the other hand, many who write their names are able to write nothing else; and the writing of the name is no proof of the possession of that stock of the elements of literary and scientific knowledge which it is desirable that the whole mass of a civilized nation should possess. The return is of unquestionable value, as an evidence of the *relative state* of elementary education in different parts of the country, at different times."

The proportion of those who wrote their names is rather less than it was in 1844: but there was a great increase of marriages in 1845, and it is probable that the increase was greater among the ignorant than among other classes of the population, which will account for the change without implying that the population at a marriageable age in 1845 were less able to write than the population at the corresponding age in previous years. The serious fact remains, that there is no evidence that any improvement in the mere elementary education of the people took place in the period when the men and women married in the seven

* The fee of the surrogate (who in Doctors' Commons is a Doctor of Laws), before whom the affidavit is sworn, is only 1*s.* It is not known precisely what becomes of the remaining *thirty-nine* shillings; but several offices in the Ecclesiastical Courts are, it is stated, partly, others wholly, sinecures. The Commissioners in 1832, among whom were the late Archbishop of Canterbury and other distinguished prelates, reported that "The annual emoluments of the Judge of the Prerogative Court, on an average of three years, are 3261*l.*; of the [*two*] *Principal Registrars*, 8793*l.* per annum; of the *Deputy Registrars*, 3664*l.* per annum; of the *Clerks of the Seats*, and *their Deputies*, 8448*l.* per annum. *The office of Principal Registrar has long been a sinecure office; that of the Clerks of the Seats for many years in the same situation.* In conformity with our previous suggestions, we think it would be extremely advisable to make an arrangement *for the extinction of all existing sinecures*; and that in future there should be no office the duties of which are not fulfilled in person."—Report of Ecclesiastical Commission, 1832, reprint of 1843, p. 68.

years, 1839–45, were educated; and that the state of education was such that 4 in 10 English men and women could not write their own names. The state of education differs in different counties. And it has recently been shown, in an analysis of the Criminal Returns, compared with the facts published in previous Reports, that crime is most prevalent in the districts where in proportion to the whole the fewest numbers can write. "It is found, that out of 22 different combinations formed of the various districts of England and Wales, in every instance there is an excess of crime where there is the least education or instruction; and, comparing the respective sections of each group of counties, it will be seen that there is an average excess of 25 per cent. of crime in the sections of inferior education over that of higher education; and in some districts the excess is as much as 44 per cent."*

The Tables, *h*, *i*, *k*, *l*, *m*, *n*, exhibit the principal facts of interest connected with the Marriage Returns.

Births.—The number of children born alive and registered in 1845 was 543521: taking an equal number of males and females, this is 3·238 per cent. on the population. *One* child was born to 31 persons living; or, to 100000 males and 100000 females living of all ages, there were 6476 children born alive. The increase in the proportion of births has been very slight since 1842, notwithstanding the increase of marriages.—(Table *o*.) In Lancashire and Cheshire there were 7444 children born to 200000 males and females living; in the South-Eastern division (comprising the extra-metropolitan districts of Kent and Surrey, Sussex, Hampshire, and Berkshire), the proportion of children born was 5944; in Wales, 5835, to a population of 200000. In Table (*p*), the births are compared with the number of women living between the ages of 15–45, in several divisions and counties; the result shows the relative fecundity of the population in different parts during the 7 years. It is only necessary to bear in mind that all the births are not registered; and that a certain addition should be made on this account to the numbers in the Table.

The number of children *not born in wedlock* was 38241 in 1845; the number born in wedlock was 505280. Hence 7 per cent. of the children born alive in 1845 were born out of wedlock; the proportion distinguished in 1842 was 6·7 per cent. The subsequent Tables show the proportions born out of wedlock in the several counties and statistical districts of England and Wales. The highest proportion is 17·4 per cent., the lowest is 1 per cent. Either through the incompleteness of the schedules, the misstatements of informants, or the want of vigilance in the registrars, there is reason to suspect that in large towns, and particularly in London, a considerable number of illegitimate children either escape registration altogether, or are registered as though their parents were married.

(*p*)—Proportion of Births to Women living between the Ages 15-45.

* The average Annual Births (col. 5) were divided by the females living at the age of 15 and under 45 (col. 3), corrected for increase in order to obtain col. 6.

Males and Females born.—In the 7 years 1839-45, there were 1863892 males, and 1772491 females born alive. To 10000 girls 10515 boys were born. The proportion in the whole country is nearly 20 boys to 19 girls. The proportion of boys born is greatest (1·0617

to 1·0000) in the Northern division, least (1·0455 to 1·0000) in the South Midland division. On comparing the male and female legitimate and illegitimate children born in the 2 years, 1842, 1845, it is found that of legitimate children there are 10510 boys to 10000 girls; while only 10393 boys are born out of wedlock to 10000 girls: there is an excess in the proportion of boys among those born in wedlock, amounting to 117. The proportions are in legitimate children nearly 20 boys to 19 girls; in illegitimate children 26 boys to 25 girls. In the different divisions of the country the proportions vary; but it has been shown by Poisson, and other mathematicians, that the fluctuations in ratios of this kind bear a certain relation to the number of facts observed; the fluctuations being greatest where the facts are least numerous.

(*s*) The Proportion of Male to Female Births Registered in England in 7 Years, 1839-45; also the Proportion of Male to Female Births of the Legitimate and Illegitimate Children Registered in the Years 1842 and 1845.

Deaths.—The deaths registered in England during the year 1845 were 349366. The annual rate of mortality per cent. among males was 2·163, among females 2·001; and the mean mortality of the two sexes was 2·082 per cent., or nearly 1 in 48. The mortality was much lower in 1845 than it had been in any other of the eight years, 1838–45, during which the new system of registration has been in operation. The mortality was 2·290 per cent., or 1 in 44, in 1840; it was 2·160, 2·167, 2·120, and 2·155 per cent. in the years 1841–4, and, consequently, presented little deviation from the mean of 2·176 per cent. (one in 46 nearly.) The mortality in 1845 was below the average in nine out of the eleven divisions. In London the mortality was lower than it had been in any of the seven previous years; in the North Western division (Cheshire and Lancashire) and in Yorkshire, it was lower than it had been in any year except 1844. In the Eastern division (comprising Essex, Suffolk, and Norfolk), the mortality (2·076 per cent.) was higher than the average (2·028 per cent.), and higher than in any of the seven previous years, except 1840 and 1844, when the mortality was 2·077 and 2·098 per cent. In the Welsh divisions (comprising Wales and Monmouthshire) the mortality of 1845 was also slightly above the average. If the marriages indicate the opinions which the people entertain of their prospects in the world, the deaths move as the shadow of their past

sufferings or well-being; and the great reduction in the mortality of 1845 was undoubtedly in part owing to the active employment and the relative abundance of food in that and in the previous years.

(*t*) Deaths to 50000 Males and 50000 Females living in the Eight Years 1838–45.

I have continued the publication of the Weekly Tables of Mortality for London and of the Quarterly Tables. I cannot better describe the state of the public health during the four quarters of the year 1845 than by making a few extracts from the remarks which were written and published at the end of every Quarter.

"The Quarterly Returns are obtained from 115 districts,* subdivided

into 576 sub-districts. *Thirty-four* districts are placed under the metropolis, and the remaining 81 districts comprise, with some agricultural districts, the principal towns and cities in England. The population was 6578912 in 1841."

The general results derived from these returns are borne out by the returns from the whole kingdom.

Quarter ending March 31st, 1845.

"The season to which the return refers, was remarkable for its severity; the temperature fell lower than had ever been observed and recorded in the neighbourhood of the metropolis. The mortality was proportionally high; 49874 deaths were registered; 43958 had been registered in the last quarter of 1844; and 38784 in the September quarter of that year. The increase of deaths was therefore upwards of 11000.

"In the unhealthy countries of the world the mortality is highest in the hottest months, and this was the case formerly in London; but the greatest number of deaths now invariably happens in the coldest quarter of the year. Thus the average number of deaths (45484) in the March quarters of 1840–4 is 4220 above the general quarterly average (41264) of the same five years 1840–4; but the deaths in the first quarter of the present year were 49874, or 4390 above the average of the March quarter of the previous five years. It is true that the population increased in the interval; but the increase of population would not account for more than half the excess of deaths.

"The mortality was below the average in the milder climate of the south-western parts of the island, and in the coal districts of the north; it was highest on the eastern coast, in the metropolis, and in North Wales.

"In the city of Norwich 708 persons perished in the three months out of a population of about 62000. The excessive mortality is accounted for in the Notes; 57 deaths from small-pox were registered in East Wymer, 36 in Conisford, 40 in Mancroft. The registrar of Coslany states that the average 'is exceeded by about 100 deaths, principally from small-

* The districts comprise:—

The whole of London.

In the South Eastern Division.—Maidstone, Brighton, Isle of Wight, Portsea Island, Winchester, Windsor.

In the South Midland Division.—St. Albans, Wycombe, Oxford, Northampton, Bedford, Cambridge.

In the Eastern Division.—Colchester, Ipswich, Norwich, Yarmouth.

In the South Western Division.—Devizes, Dorchester, Exeter, St. Thomas, Plymouth, Redruth, Penzance, Bath.

In the Western Division.—Bristol, Clifton, Stroud. Cheltenham, Hereford, Shrewsbury, Worcester, Kidderminster, Dudley, Walsall, Wolverhampton, Wolstanton, Birmingham, Aston, Coventry.

In the North Midland Division.—Leicester, Lincoln, Nottingham, Basford, Derby.

In the North Western Division.—Stockport, Macclesfield, Great Boughton, (including Chester), Liverpool, West Derby (adjoining Liverpool), Blackburn, Preston, Rochdale, Bury, Bolton, Wigan, Prescot, Chorlton, Manchester, Salford, Ashton.

In the York Division.—Sheffield, Huddersfield, Halifax, Bradford, Leeds, Hunslet, Hull, York.

In the Northern Division.—Sunderland, Gateshead, Tynemouth, Newcastle-on-Tyne, Carlisle, Cockermouth, Kendal.

In the Welsh Division.—Abergavenny, Pontypool, Merthyr Tydfil, Newtown, Wrexham, Holywell, Anglesey.

pox. No deaths have occurred from small-pox after vaccination.' (The Registrar's Notes under Norwich.) Few of the victims of small-pox had been vaccinated; vaccination had not even been attempted in a great majority of cases; and thus, in one city, between 200 and 300 persons were suffered to perish in three months—others were blinded, maimed, and deformed for life—through the negligence of the parents in the application of the protection discovered by Jenner, and placed at the disposal of all by the Legislature. Other examples of the consequences of neglecting vaccination will be found in the Notes. Ashton-under-Lyne is the only parish in which it is mentioned that the 'Churchwardens and overseers have refused to carry out the provisions of the Act of 3 and 4 Victoria,'—to extend the practice of vaccination, by contracting with medical officers for the gratuitous protection of the poor. Sixty-one funerals took place in Ashton town from small-pox. In Jenner's Life an instance is mentioned of the cost of coffins convincing the overseers of a certain parish of the advantages of vaccination after all the higher arguments of humanity and justice had failed.

"The great mortality was due in part to the extreme coldness of the season; but, as is judiciously remarked by one of the registrars of Stockport, 'great as it is, there can be no question that the mortality would have been greater, in so severe a winter, had not the improved condition of the industrious classes enabled them to be both better clothed and fed.'

"In London, small-pox, scarlatina, and measles were epidemic; the deaths from diarrhœa and erysipelas were above, those from typhus below, the average. 411 deaths from hooping-cough were registered, which is 113 less than the average. The deaths from all pulmonary diseases rose; and 632 persons died of bronchitis, 606 of asthma, 1296 of pneumonia. There was a marked excess of deaths from scrofula, tabes mesenterica, cancer, atrophy, malformation, apoplexy, delirium tremens, and intemperance. 12 persons labouring under diabetes died (the average is 6); and it is worthy of remark that cold weather is always very fatal to this class of patients.

"*Districts in which the mortality was* ABOVE *the average of five March quarters*:—The five metropolitan districts, Portsea Island, Northampton, Norwich, Kidderminster, Dudley, Wolverhampton, Birmingham, Aston, Coventry, Nottingham, Stockport, West Derby, Blackburn, Chorlton, Manchester, Ashton, Bradford, Merthyr Tydfil, Holywell, and Anglesey.

"*Districts in which the mortality was* BELOW *the average of five March quarters*:—Cambridge, Liverpool, Wigan, Prescot, Salford, Hull, and Pontypool.

"The mean temperature of the thirteen weeks at Greenwich was 35°·4. The temperature of the corresponding week, on an average of 25 years, was 38°·9, according to Mr. Henry's observations. The temperature of the first four weeks of January was from 1° to 6° above the average; from the close of January to the end of March, the mean temperature was 8° below the average; and in one week (March 9th to 15th) it was 29°·1, or 13° below the average. On Wednesday morning, February 12th, a thermometer on grass fell to 6° below zero; the thermometer on flax, cleared of snow, was 12°·5 below zero, probably a point lower than has ever been recorded in this climate before. At the same time a ther-

mometer on long grass under snow was 26°; showing, in a striking manner, the protection snow affords vegetation against sudden extremes of temperature. The temperature of the air fell in the night to 8°·8.

"40729 deaths were registered in the *Quarter ending June 30th*, 1845, which are 1235 more deaths than were registered on an average in the corresponding quarters of five previous years. The increase of deaths is not, however, in proportion to the probable increase of the population. After the necessary correction, the mortality of the Spring quarter is somewhat below the average.

"*Small-pox* has prevailed epidemically in many districts, and the mortality from that disease has been considerable among children unprotected by vaccination. Several persons said to have been previously vaccinated, and one who had been inoculated, also died of small-pox. In many districts no deaths from small-pox occurred; in others, the disease was introduced by migratory labourers, ill provided probably with household comforts and conveniences. The neglect of vaccination is adverted to by several registrars. The registrar of *Leicester* says, 'I have registered *fifty deaths* by small-pox from January 1st to June 30th, 1845; only *one* of the fifty persons had been vaccinated, and that was a doubtful case.' The registrar of *Heaton Norris, Stockport*, mentions, that, 'in one family, three infants (two sisters and a brother) all died of small-pox in the short space of eleven days.' 'Small-pox,' observes the registrar of *Great Marlow, Wycombe*, 'has appeared in part of my district. I find, on inquiry, that a vast number of parents have not availed themselves of vaccination, although perfectly aware that it can be done free of expense.' The number of deaths (143) in the northern sub-district of Yarmouth is much above the average, in consequence of the 'prevalence of small-pox, which has proved fatal in 62 cases. Of this number 61 died without previous vaccination. One case only is recorded in which vaccination is said to have been performed; a midwife was the operator, and the patient was attended by an old woman. The child was two months old.' *Measles* and *scarlatina* have been the epidemic in several districts.

"The 11267 deaths in the METROPOLIS are near the average of the season, if we allow for the increase of the population. The weekly deaths fell in the quarter from 884 to 756, as the temperature rose. The deaths from *small-pox* were 246—less by 235 than were registered in the previous quarter, but 102 above the average of the June quarter for five previous years. *One hundred and four* women died from childbirth in the metropolis within three months.

"*Districts in which the mortality was* ABOVE *the average of five June quarters*:—West, north, east, and south districts of the metropolis: Winchester, Northampton, Colchester, Ipswich, Yarmouth, Dorchester, Plymouth, Kidderminster, Dudley, Wolverhampton, Birmingham, Leicester, West Derby, (adjoining Liverpool), Blackburn, Rochdale, Chorlton, Ashton, Bradford Leeds, Merthyr Tydfil, Holywell, Anglesey.

"*Districts in which the mortality was* BELOW *the average of five June quarters*:—Central district of the metropolis: Devizes, Redruth, Penzance, Bristol, Hereford, Shrewsbury, Macclesfield, Liverpool, Preston, Bury, Wigan, Prescot, Sunderland, Tynemouth, Newcastle-on-Tyne, Kendal, Wrexham.

"The mean temperature at Greenwich was 51°·9, which is 1°·1 *below the average* of the season. The north and north-east winds prevailing, the temperature of the whole month of May was below the average; but the wind turning south-west, the temperature of June rose above the average of the month. The fall of rain was nearly 5 inches (4·8). At Derby more than 8 inches of rain fell in the same time."

"The public health during the *Quarter ending September 30th* was good; for the deaths, notwithstanding the increase of the population, were only 36008, or 1870 less than the average of the corresponding quarters of five former years (1840–44). This favourable state of things was general, and was observed in the majority of the town districts of the kingdom. The southern coast has been unusually healthy through the summer; the deaths in Brighton, on an average 262, were only 219; in the Isle of Wight, the deaths, on an average 183, were 121; in the Portsea Island (Portsmouth), the deaths, on an average 299, were 239; in Exeter, the deaths, on an average 200, were 160; in Plymouth, the deaths, on an average 224, were 191; in Penzance, the deaths, on an average 292, were only 166 in the quarter ending September 30th, 1845.

"The mortality has been below the average in every district round the south-eastern and southern coast, from London to the Land's End; yet the average mortality itself is low throughout that part of the country. In the last Annual Report it will be seen that only 1·9 per cent., or 1 in 52, of the inhabitants die annually in the South Eastern and South Western divisions, while the annual mortality of the whole kingdom is 1 in 46.

"In Austria, including the northern parts of Italy, the annual mortality is 1 in 33;* and the mortality throughout Italy is not less than in Austria. In the cities of Italy the mortality, according to official documents, varies from 3 to 4 per cent. In France the annual mortality is 1 in 42.

"The mortality was *above* the average of the corresponding quarter in the following districts:—Northampton, Bedford, Yarmouth, Kidderminster, Leicester, Rochdale, Halifax, Bradford, Pontypool, Newtown, Holywell, and Anglesey.

"Leicester is an unhealthy district; the average mortality is high; the average number of deaths in the summer quarter is 325; in the last quarter no less than 457 deaths were registered. The registrar of the east district remarks—'Since that time (1840) vaccination seems to have been totally neglected; hence the great increase of deaths for this and the preceding quarter. I have registered 73 DEATHS FROM NATURAL SMALL-POX, and only 4 deaths of persons that had been vaccinated, and those very doubtful. *Measles* has been very fatal; I have registered 57 deaths from that epidemic.'

"The fatality of *small-pox* is mentioned by the Registrars of Yarmouth, Northampton, Wolverhampton, Birmingham, Coventry, Basford, Liverpool, Bury, Prescot, and other districts, in their remarks.

"LONDON:—76 deaths from *small-pox* were registered in the quarter: the average is 130. In the week ending September 13th, no death from small-pox was registered. Such an exemption has never before been

---

* Reg. Gen. 6th Report, p. xxxix.

observed since the new Tables have been published. *Measles* has been epidemic; 688 deaths have occurred from that disease. *Hooping-cough* has been prevalent. Of *scarlatina* only 194 persons, chiefly children, died: the average is 476. Only 2 deaths from privation were returned; the average of the quarter is 5.

"The weather presented this remarkable peculiarity—that the mean temperature of every week of the thirteen was below the average. The mean temperature of the quarter at Greenwich was 57°·1, which is nearly 4 *degrees below the average of the season.* The month of August was 5° below the temperature of the same month on an average of 25 years. Seven inches of rain fell at the Observatory. The results varied considerably in other parts of the country."*

"The mortality in *the last quarter* of 1845 was much lower than is usual, for only 39178 deaths were registered, which is less by 4740 than the number (43918) registered in the corresponding quarter of 1844; and 2357 less than the average of the corresponding quarter of seven previous years, notwithstanding the increase of the population at the rate of about 1·74 per cent annually.

"The fluctuations in the mortality, above and below the average, are exhibited in the following series of numbers. The lower line is deduced from the Return in the December quarter of 1838, and shows what the deaths would have been if they had increased in the same ratio as the population.

	1838	1839	1840	1841	1842	1843	1844	1845

* In reading the twentieth column, it will be borne in mind that + is read "HIGHER," and — "LOWER," than the average.

"The mildness of the season was one cause of the diminished mortality. This is illustrated by the annexed table of the deaths, exclusive of those by violence, registered in the metropolis, and the mean temperature at Greenwich of the last six weeks of 1844 and 1845. The deaths and the temperature were the same at first; on the fifth week the deaths were 1343, in 1844, and only 933 in 1845; the temperature in the previous week (the fourth) had fallen to 28°·2 in 1844, and only to 39°·2 in 1845.

Number of Weeks.	1st.	2nd.	3rd.	4th.	5th.	6th.
1844.—Mean Temperature of the last six weeks	44°·5	37°·6	31°·7	28°·2	37°·0	33°·4
1844.—Deaths Registered in the last six weeks	884	1057	965	1170	1343	1200
1845.—Deaths Registered in the last six weeks	886	943	935	949	933	898
1845.—Mean Temperature of the last six weeks	45°·5	46°·1	42°·4	39°·2	43°·6	40°·1

"A fall of the mean temperature of the air, from 45° to 4° or 5° below the freezing point (32°) of water, destroys from 300 to 500 lives in London. It produces the same results on a larger scale all over the country. Nor is it to be wondered at that a great change in the heat of the air which we breathe and live in should have such an effect.

"In the annexed Table, the deaths returned by the registrars for each year are given. [I now add in column 3, the deaths in the whole kingdom, for the sake of comparison.]

Years.	Deaths Registered in 115 Districts.	Deaths Registered in all England.
1838	162867	342760
1839	162605	338984
1840	171694	359687
1841	160733	342847
1842	161948	349519
1843	163201	346445
1844	167708	356933
1845	165789	349366

"In the first three years there were 497166 deaths in 115 districts; in the last three years 496698. The population increased in the districts, from which returns have been procured, about 1·74 (nearly 1¾) per cent. annually, in the intervals of the last censuses,—and the excess of births over deaths has continued,—so that it may be safely assumed, that the numbers living have gone on increasing at the same rate—about 9 per cent. in the five years from the middle of 1839–40 to the middle of 1843–45. Now, the deaths, instead of increasing with the population 9 per cent. and consequently amounting to 541960, in the three last years were 496698: less by 45262 than if the rate of mortality which prevailed in the three years 1838–40 had been sustained. The improvement may, perhaps, be partly accounted for by other circumstances; but, as far as can be seen at present, it is fairly ascribable to the partial removal of nuisances from large towns, to some increase of employment, and, we may hope, a consequent amelioration in the condition of the great body of the people in the dense town districts of the kingdom. But an epidemic, generated in this or any neighbouring population, may speedily reverse the results of the Tables, and carry off the thousands of lives that appear to have been spared and saved."

I add the latest returns of the Marriages, Births, and Deaths, which I have been able to procure from France, Austria, and Prussia, for comparison with those of England.

I beg to direct particular attention to the series of Tables showing the mortality of the people, at different ages, in the several districts and counties of the first five divisions. I defer any comment on these important Tables until the series is completed in the next Report.* I publish them for as many districts as the calculations already extend to, in order to place as early as possible before Her Majesty's Government, and the people of the different parts of the country, a correct statement of the relative salubrity of the town and country districts of the kingdom.

I have the honor to be,
Sir,
Your faithful Servant,
GEORGE GRAHAM,
Registrar-General.

The Right Hon. Sir George Grey, Bart. M.P.
&c. *&c.*

* The whole series is in the Appendix to the 9th Report, 8vo. edition.

Tabular Digests of the Marriage Returns referred to in the Report.

(Table II.)—Marriages in Eleven Divisions of England and Wales in each of the Years from 1754 to 1837 and from 1839 to 1845.—(*Derived from the Parish Register Abstracts, and the Registrar-General's Reports.*)*

The numbers given for the years 1754–1800 are derived from the Parish Register Abstract published with the Population Returns for 1801; those for 1801–10, 1811–20, and 1821–30, from the Abstracts published with the Population Returns for 1811, 1821, and 1831 respectively; and those for 1831–7 from the Parish Register Abstract of the late Census Commission. In all these years the marriages are those registered in the Parliamentary Counties included in the several divisions. (See Table III., pp. 50 to 55.) The marriages for 1839–45 are taken from the Annual Reports of the Registrar-General, and refer to the Registration Counties, that is, aggregates of districts not in all respects coincident with the Parliamentary Counties comprised in the same divisions.

(TABLE II.)—Marriages in Eleven Divisions of England and Wales in each of the Years from 1754 to 1837 and from 1839 to 1845—*continued.*

* In the Parish Register Abstract, 112094 is the total given for 1831; the sum of the details, however, is 112294 as here stated.

† The marriages celebrated during the latter half of 1837 under the Registration and Marriage Acts which came into operation on the 1st of July in that year, are not included in the numbers here given; which are only those returned by the clergy of the Church of England.

‡ The total number of marriages registered in 1838 was 118067, but the details have not been abstracted in a form which admits of comparison with the other years. The clergy returns are not available for the purpose as they include only marriages solemnized according to the rites of the Church of England.

(TABLE III.)—Marriages in the Counties of England, in each of the Years from 1754 to 1845.

(Derived from the Parish Register Abstracts in the Population Returns, and the Registration Abstracts.)

* The numbers stated for the years 1754–1800 are taken from the Parish Register Abstract published with the Population Returns for 1801; those for 1801–10, 1811–20, 1821–30, from the same returns for 1811, 1821, and 1831 respectively; those for 1831–37 from returns published by the late Census Commission; and those for 1839–45 from the Annual Reports of the Registrar-General.

† The marriages in the town of Birmingham from 1754 to 1800 are stated in the Parish Register Abstract to be "collected from the registers of St. Martin and St. Philip, both in the town of Birmingham;" those given for each of the years from 1801–30 are obtained from the registers of Aston, Deritend with Bordesley, Edgbaston, St. James (Aston), St. Martin, and St. Philip.

‡ The marriages in Salford chapelry from 1754 to 1800 were not returned with those of Manchester town as in the subsequent years, 1801 to 1830.

§ The returns of marriages in Kingston-upon-Hull from 1754 to 1800 were "collected from the registers of Ferriby with Swanland, Hessell, and St. Mary," those for the years 1801 to 1830 are stated to be derived from the "registers of North Ferriby V., Hessle V., Kirk Ella V., St. Mary, P. C., and of Holy Trinity V." The addition of the parishes of Kirk Ella and Holy Trinity will account for the increased number of marriages from 1801.

(TABLE IV.)—Marriages Registered in the undermentioned Places in each of the Years from 1754 to 1837, and from 1839 to 1845—*continued.*

* The returns of the marriages celebrated in Stoke Damerel parish (which is co-extensive with the district) in the years 1831–37 were not obtained.

† The Registration and Marriage Acts came into operation 1st July, 1837; the marriages which took place under them during the latter half of that year are not included in the numbers here given.

‡ The numbers for the years 1839–45 are taken from the Reports of the Registrar-General which do not supply the same information for 1838; and as the clergy returns include only marriages according to the rites of the Church of England, omitting those celebrated under the Registration and Marriage Acts, they cannot be made available for that year.

(TABLE V.)—Marriages Registered in each of the 11 Divisions of England during the Years 1756 to 1845; in Periods of 5 and of 10 Years.

First Year of the Period.	Metropolitan Counties, (Middlesex and Surrey.) 1	South Eastern, including Greenwich and excluding Surrey. 2	South Midland. 3	Eastern. 4	South Western. 5	Western. 6	North Midland. 7	North Western. 8	York. 9	Northern. 10	Welsh. 11	Numbers not included in any Division.	Total uncorrected by Mr. Rickman.	Final Total corrected.

* After the Year 1830 the Returns do not admit of comparison with the previous Years, the Districts having been altered for Registration purposes. See notes, pp. 56–7.

† See note p. 56.

I add, for the sake of comparison, all the returns that I have been able to procure of the number of persons married in the various countries of Europe. The return in its present shape is interesting; but it would be of much greater value if the several series were complete, and began earlier.

Number of Persons Married Annually in England, France, Prussia, Sweden, Norway, Denmark, Hanover, Saxony, Austria, Russia, and Sardinia.

Years.	England, (not including Scotland or Ireland.)	France.	Prussia.	Sweden.	Norway.	Denmark (exclusive of Holstein and Schleswig.)	Hanover.	Saxony.	Austria.	Russia.	Sardinia.	Years.

the population is situated: hence these groups of Districts designated Counties rarely, if ever, correspond with the respective Counties named.

preceding years, 1839–43, have been taken from Surrey, South Eastern Division, and added to those of the Division I.

1845.—ABSTRACT OF MARRIAGES,

Registered in England, pursuant to the Act of 6 and 7 Wm. IV., cap. 86, in the Year ending December 31.

No.	DIVISIONS AND COUNTIES.	MARRIAGES. According to the Rites of the Established Church. Special Licence.	Licence.	Banns.	Superintendent Registrar's Certificate.	Not Stated.	TOTAL.	MARRIAGES. Not according to the Rites of the Established Church. TOTAL.	In Registered Places. Roman Catholics.	Other Christian Denominations.	Superintendent Registrar's Office.	Quakers.	Jews.	TOTAL MARRIAGES. NOTE.—When a District runs into two or more Counties, it has been placed with the County in which the greater part of the population is situated; hence these groups of Districts designated Counties rarely, if ever, correspond with the strict boundaries of the respective Counties named.

* The Births in the Seven Years, in the District of Wandsworth, have been added to those Registered in the Metropolis. Prior to 1844, Wandsworth was in Surrey (Division No. 2).

ABSTRACT

Registered in England in the Four Quarters of the Years 1839, 1840, 1841, 1842,

1845.—ABSTRACT OF TWIN BIRTHS,

Registered in England in the Year ending 31st December—or the Number of Cases in which Mothers were delivered of Two Living Children; distinguishing the *Legitimate* and *Illegitimate*, as well as those in which both were *Males* or *Females*, from those in which *one* was a *Male* and the *other* a *Female*. The Number of Children Born will be obtained in every case by doubling the Number in the Table.

* The population used in calculating the mortality per cent. is the arithmetical mean of the three enumerations, 1820, 1830, and 1840.

NOTE—(?) The bodies of persons whose ages are not stated, were found by the police in Stockholm, and not apparently returned until the 5 years, 1836–40. In order therefore to obtain an approximation to the correction required in calculating the mortality at the several ages, the number is assumed to have been uniform in the preceding Year.

* The number of still-born (Males and Females) in Stockholm was:—during the 5 years 1831–35, Legitimate 373, Illegitimate 373; Total 746. During the 5 years 1836–40, Legitimate 391, Illegitimate 480; Total 871. The still-born are not included in this Return.

† The population used in calculating the mortality per cent. is the arithmetical mean of the three enumerations, 1830, 1835, and 1840.

NOTE.—(?) The bodies of persons whose ages are not stated, were found by the police in Stockholm; the number during the 5 years 1831–35, is not mentioned in the returns, and has therefore been assumed to be the same as in the 5 years, 1836–40.

Letter to the Registrar-General, by William Farr, Esq.

Sir,

The facts collected under the Registration Act throw light on the causes that affect the health of the people, and will ultimately lead to the diminution of sickness and to the extension of life. This is, perhaps, their most important use. Next to it, in interest, is their application to the purposes of Life Insurance; one of the most valuable discoveries of modern times, and one of the highest branches of commerce, which may be said to have originated in England, and has flourished to the same extent in no other country.

Life Insurance is either carried on in mutual societies or in commercial companies. The transactions of both classes of societies extend over many years, —in fact, over the whole term of life; and it is only by the use of accurate tables that these transactions can be made safe, inexpensive, and equitable.

I submit to you the following observations on the Northampton Table, with a new one constructed on the required data, which Dr Price had no means of obtaining in England when he drew up his celebrated Table for the Equitable Society.

It is, I think, proved beyond doubt that Dr. Price's Table is erroneous to an extent that deprives it of all value.

Dr. Price's Table was constructed upon the hypothesis that the population of Northampton had been stationary for nearly a century. Availing myself of the information now accessible, I have endeavoured to test this hypothesis; and have succeeded in procuring a tolerably satisfactory account of the population of the town from the 11th century, when the Domesday survey was taken, up to the present day. The population increased during the whole period. The few baptisms compared with the burials when Dr. Price wrote, is explained by the peculiar religious opinions, the occupations, and the habits of the town. To throw some light on the causes of the increase of population, I consulted the local histories; referring, however, on the points immediately connected with the growth of the town, to the original sources, and where this has not been done, I have chiefly relied on the County Histories, by Bridges (2 vols. fol.) and Baker; the Reports on Municipal Corporations (App., Part 3, Northampton, Parl. Papers, 1835, No. 116); the Reports on the Boundaries of Parliamentary Boroughs (Vol. ii. Part 2, 1832, No. 141); the Reports on the [Municipal] Boundaries of certain Boroughs (Part 2, 1837, No. 238); and the Northampton Guide-book of Mr. Wetton, the Postmaster, which, though written without any pretension, I found, on examination, had been drawn up with care and accuracy. The "Historical Memorials of Northampton," taken chiefly from unprinted records, by the Rev. C. H. Hartshorne, M.A., has appeared since the folio edition of the Report was published. It is a valuable contribution to the history of the town.

It is probable that similar records exist, which might be made available in the investigation of the statistics of the other towns of the kingdom. Statists in the localities can, by applying the resources which science now furnishes, and pursuing the method here followed of proceeding from the present to the past, —the known to the almost unknown,—contribute to the general history of the country, eliminate some of the laws which governed events through past times, and contribute at the same time to the improvement of the places in which they reside.

When the new English Life Table, and the other Tables, now in preparation, are completed, I hope to have an opportunity of referring again to the finance of Life Insurance. The Tables of the mortality at the several ages during seven years in 324 parts of England, each inhabited, on an average, by 50,000 persons, will furnish Life Offices and the public with the data indispensably required to come to a sound satisfactory arrangement. For neither the limited experience of offices,—the returns from two English towns,—nor the facts from foreign nations, are an adequate basis for the doctrine of Insurance in its application to all classes of society.

The task of rectifying the complicated errors and repairing the inveterate injustice running through the premiums, valuations, distribution of profits, and allocation of bonuses, in offices that have used an erroneous Table, is great, laborious, and difficult; but it is not beyond the powers of the body of actuaries now attached to the companies engaged in this scientific branch of finance and enterprise. An equitable adjustment of existing claims is not impracticable, and future embarrassment will be prevented by using correct Tables.

I have bestowed more time on the Table in common use than some persons will think was required—from a deep sense of the importance of the subject, of the caution required, and of the propriety of throwing every possible light on the principles which affect not only the distribution of vast sums of money, but the economy of the most prudent class of the community, and the equity as well as the stability of the most valuable commercial institutions of the empire.

I have the honour to be, Sir,
Your very obedient and humble servant,
WILLIAM FARR.

THE NORTHAMPTON TABLE OF MORTALITY.

The Northampton Table of Mortality is a Table which professes to show how many out of 11650 persons, born at the same time, attain the ages of 1, 2, 3 years, and every year of age up to 96, when it terminates with the death of the last liver. It was framed by Dr. Price from the accounts kept at Northampton during the 46 years 1735–1780, of the ages at death of 4689 persons who were buried in the parish of All Saints. The late Mr. William Morgan, in 1783, calculated from it "with incredible care and accuracy," Tables of the values of life annuities, of insurances on single and joint lives, and of annuities "payable on the survivorship of one life beyond another." These Tables, adopted by the Equitable Society, which was founded in 1762, have since 1783 not only formed the "basis of the business of that Society,"[1] but are now used by the Alfred, the Atlas, British Commercial, Hand-in-Hand, Hope, Imperial, Law, Palladium, Rock, Royal Exchange, Union, Westminster, Globe, the Scottish Equitable, the Scottish Widows' Fund, and other English as well as Scotch insurance offices. The *Northampton Table* has been the basis of calculations for Friendly Societies; the Government, at one time, sold annuities to a large amount on its terms; and legacy duties are still levied by it under 36 Geo. III. cap. 52. It is impossible to form an estimate of the amount of money which has been and is daily received and distributed by this Table, in the shape of premiums of insurance, life annuities, bonuses, fines, and life-interests in estates. The Equitable Society alone stood engaged on January 1, 1840, for the payment of $7\frac{1}{4}$ million pounds in the ensuing 10 years.

[1] Price's Works, by W. Morgan, 7th edit., vol. i., pp. 174–192.

It is a law of nature that of 11650, or any other large number of persons born, a certain number die in every year of age; that any one may die at any time; that few or none survive a century; and that the average durations of the lives of considerable numbers, varying in different, are the same in similar circumstances. This is the ground upon which life annuities are granted. According to Dr. Price, the people of Northampton live on an average 25 years. Assuming this to be true, and that the same rule applies to mankind generally, it is evident that £25, put, at the birth of each person, into a hoard or a bank at no interest, would provide a life annuity of £1 for every contributor. This would in fact be equivalent, if they *all lived 25 years*, to making a deposit at once of £25, and taking £1 a-year from it for each person until the deposit was exhausted; nor would the result be different, though some received only 1, 2, or 3 annual payments, and others 70, 80, or 90 payments, provided that the average number of payments to all, one with another, were 25. If the annuitants lived on an average only 20 years, there would be a surplus. If they all lived 37 years, the deposit providing but 25 payments for each, it is evident that the annuity would cease, and leave the last 12 payments unmet; or, as it happens in nature that some die young, and others attain old age, the former class would receive what they expected, an annuity for life, the latter class would be left without any provision at the close of their career. A society which receives deposits that will pay £25, and finds itself, in fine, called upon to pay £37, will be insolvent, and ultimately fall to ruin. By Dr. Price's Northampton Table, if the money were put out at 3 per cent. interest, and nothing were allowed for expenses, £12·270, or £12 5*s.* 5*d.* would be the value of an annuity of £1 for life; if people lived so long as 37 years, about £17·085 (£17 1*s.* 9*d.*) would provide the same annuity.

Upon the other hand, if instead of a man making a deposit, and taking a portion of it at the end of every year, a sum called a premium, say £1, be paid at the beginning of every year, the amount be allowed to accumulate, and at his death a sum equal to the average sums paid in premiums, say £25, be granted to his representatives, it is equivalent to the operation of life insurance, if there are no expenses, and the money bears no interest. An office which made its calculations on the assumption that it would receive 25 premiums while the insured lived, and actually received 20 or 37 premiums, would, in the former case, become insolvent; in the latter, take 12 premiums more than it had a right to anticipate. The excess of premiums in a proprietary life office would be profit. In a mutual insurance office, if the members paid 32 premiums on an average, when they were expected to pay 28, and only the sum that 28 would provide were paid to the heirs of those who died in the first stage of its existence, a large surplus would be left for the thrice-fortunate survivors.

If 1000 or any given number of persons be taken at the age of 20, and be followed to the end of life, the years which they live added together and divided by 1000, or by the number of persons, is generally, but incorrectly, called the *expectation of life*[1]. I shall call it the *afterlifetime* at 20. So of any other

[1] *Expectation of life* is an incorrect term: the time which it is *expected* a person will live is the time which it is an even chance he will live; it is the *vie probable* of the French, and is correctly expressed by "probable lifetime." The afterlifetime can only be the same as the probable lifetime on Demoivre's hypothesis—that the surviving form an arithmetical progression. The term "expectation of life," first used by Demoivre, is correct, on that supposition, which is, however, in itself quite erroneous. The idea intended to be expressed by "expectation of life" is the *mean time* which a number of persons at any instant of age will

age. The *afterlifetimes* at 20, 40, and 60, by the Northampton Table of Dr. Price, are 33, 23, and 13 years;[1] the offices that use it expect to receive 33 premiums from men of 20, 23 from men of 40, and 13 from men of 60; if they receive 40 from men of 20, 25 from men of 40, and 12 from men of 60, they therefore receive 7 more premiums than they expect from the men of 20, 2 more than they expect from the men of 40, and *one less* than they expect from the men of 60. A mutual life office which called the excesses paid at the earlier ages profits, and divided them equally among the members of all ages, would make a distribution of the property of its members bearing no proportion to their investments. Annuities are purchased to commence at advanced ages, or after the death of one or two other persons, and insurances have to be effected on the death of the first of two lives, so that in a mutual life office it is impossible to employ a false table of mortality—wrong in different degrees at different ages—without committing extensive injustice, to say nothing of the transactions of proprietary offices, in which the public may be called upon to pay less or more than is sufficient to meet the expenses, risks, and common profits of business. Whether regard be had to the employment of the Northampton Table for the sale of life annuities, the valuation of life interests in estates and reversions, fixing premiums of insurance, or adjusting claims for chances of survivorships, by the great insurance societies, friendly societies, private persons, or the Government, the importance is incontestable of determining whether that Table represents correctly the chances of life, whether the hypothesis upon which it was constructed gives an approximation to the truth, or is entirely false, and never represented the mortality of Northampton, of the inhabitants of All Saints' parish, of lives insured, or of any other portion of mankind.

The prevailing opinion respecting the Northampton Table seems to be, that the mortality which it expresses is higher than the mortality of mankind generally; that it was correctly constructed, and did represent the mortality of the people of this country when the data were collected on which it was based;

---

live after that instant: it is the French *vie moyenne;* and this technical idea is strictly and shortly expressed by *afterlifetime*, a pure English word, formed on the same analogy as *afterlife*, *aftertimes*, *afterage*, *afterhours*. See the words in Johnson. Among the examples he quotes are,—

"What an opinion will *afterages* entertain of their religion?"—*Addison.*

"So smile the heavens upon this holy act,
That *afterhours* with sorrow chide us not."—*Shakespeare.*

"You promised once a progeny divine
Of Romans, rising from the Trojan line,
In *aftertimes* should hold the world in awe,
And to the land and ocean give the law."—*Dryden.*

Todd adds "afterlife" from Dryden, Heywood, and Butler. "Afterlife: the remainder of life."

"All of a tenor was their *afterlife*,
No day discolored with domestic strife."—*Dryden.*

The *afterlifetime* of men at the age of 30 is 33 years by the English Life Table: 33 years is not the precise time probably that any one of that age will live, but the average time that a number of men of that age will live, taken one with another. *Age* + *afterlifetime* = *lifetime*. At 30 this is 30 + 33 = 63, the average age which men now aged 30 will attain. At birth this is 0 + 40 = 40; when *lifetime* and *afterlifetime* are the same thing. The *lifetime* simply, without the addition *at a given age*, will serve to express in one word what is often improperly called *the expectation of life at birth:* thus the *lifetime* of males in England is 40 years, the *lifetime* of males in Manchester is 24 years. Those who from habit prefer "expectation of life," can always substitute it for *afterlifetime;* from the use of which in this paper no ambiguity can arise.

[1] Price, vol. ii., p. 313.

but that the discrepancy between this "Table" and other Tables,—between it and the "experience" of the Equitable and other Offices, arises from the "selection of healthy lives only" for insurance, from taking "the rate of mortality in one particular town as a criterion for that of the whole country," or "from the improvement of life which has taken place" in the present century.

The Northampton Bills of Mortality were commenced in 1735, and have been continued down to the present day. The Bill gives for each year ending December 21, the diseases, &c., fatal in All Saints, and the numbers, without distinction of sex, buried in that parish, under 2 years of age, at 2–5, 5–10, 10–20, 20–30, &c., in decennial periods to 100. It states also the gross numbers of males and females christened and buried at the four churches—All Saints, St. Sepulchre, St. Giles, St. Peter—and nine chapels or burial-places. We have the ages of those who were buried (1831–40) returned by the minister of All Saints' parish to the Census Commissioners; similar returns from the Annual Bills of Mortality, 1838–44; and the Registrar's returns of deaths in the 7 years 1838–44. The subsequent Table I. exhibits in the upper part the facts returned from the three sources, in juxtaposition with those on which Dr. Price states that he framed the Northampton Table. The lower part of Table I. is an outline of four tables of mortality, constructed in the old way, which would be true, and show the numbers out of 4689, 1344, 957, and 1282 born who attain each age, the chances of living at each age, and the afterlife-time—*if the population had been stationary*—the mortality uniform for the 90 or 100 previous years. Table II. exhibits the same facts reduced to a common scale, starting from 5132, the numbers living at the age 20 in Dr. Price's Table. The facts derived from the four sources can thus be compared; and it will be observed, that notwithstanding the smallness of the numbers, the intervention of cholera, and other disturbing causes, the cols. 2, 3, 4, 5, that is, the facts returned in 7 or 10 years of the present, and those returned for 46 years in the past century, agree very remarkably. Thus Dr. Price infers from the latter returns, that out of 5132 persons living at the age of 20, 2857 will live to 50; while upon the same hypothesis 2867 out of the same number will live to 50, if the registration returns (1838–44) be made the basis of calculation. Under the age of 20 there is indeed a discrepancy; the returns of the present day (cols. 3, 4, 5) agree closely together, and with Dr. Price's Northampton Table (col. 2 A, Table II.); but they differ from a table (col. 2, Table II.) deduced directly from Dr. Price's facts.

Before proceeding to consider the new and correct Northampton Table, it will be convenient to advert to a new table which I have framed on the same plan, and after the model of Dr. Price's table. Here, however, it is necessary to inquire, first, "*How the old Northampton Table was constructed by Dr. Price?*" This he has only explained indirectly in his works; and the extent of the deviations from the facts is nowhere stated. The general principles of his method are laid down in the "Observations on the proper method of con-" structing tables for determining the rate of human mortality, the number of "inhabitants, and the value of lives in any town or district, from bills of "mortality, in which are given the numbers dying annually at all ages."[1] He exhibits the alterations in the London Tables (XIII., XIV., XV., XVI. of his work); delivers the data from which the Northampton Table was derived; and says, "the XVIIth Table in this volume *is framed in the same manner* "with Table XV. for London: and this is the *genuine Table of Observations*

[1] Second Essay, vol. ii., p. 73, of Works by Morgan, 7th edition.

TABLE I.—Return of Deaths or Burials at twelve periods of Life in All Saints' Parish, Northampton; Burials from Bills of 46 years, 1735–80, and of 7 years, 1838–44; Burials of Clergy Returns for 10 years, 1831–40; Deaths registered in 7 years, 1838–44.

1	2	3	4	5
Age.	Price's Facts. Burials in All Saints' Parish.	Burials.		Registration Returns. Deaths in All Saints' Parish.
		Clergy Return.	Bills.	
	1735–80	1831–40	1838–44	1838–44
	Numbers dying at each age, and under the age following:—			
0	1529	434	331	469
2	362	205	111	129
5	201	63	41	65
10	189	79	58	64
20	373	96	58	78
30	329	83	78	94
40	365	78	57	73
50	384	82	58	75
60	378	96	63	108
70	358	88	77	91
80	199	37	23	31
90	22	3	2	5
	Numbers dying at each age and upwards. If the population had been stationary, these would be the numbers living at each age to the births against 0:—			
0	4689	1344	957	1282
2	3160	910	626	813
5	2798	705	515	684
10	2597	642	474	619
20	2408	563	416	555
30	2035	467	358	477
40	1706	384	280	383
50	1341	306	223	310
60	957	224	165	235
70	579	128	102	127
80	221	40	25	36
90	22	3	2	5
100	0	0	0	0

The Table is read thus:—*Upper Part*,—of 4689 persons buried in All Saints in 1735–80, there were 1529 under 2 years of age, 362 aged 2 and under 5, &c. &c. *Lower Part*,—of 4689 persons who died, 3160 died at the age of 2 and upwards, 2798 at the age of 5 and upwards, 2597 at the age of 10 and upwards, &c.

TABLE II.—Deduced from Table I., and showing, to 5132 living at the age of 20, and dying at that age and upwards, the proportions at other ages:—

1	2	2A	3	4	5
Age.	Table from Facts which Dr. Price had for first Northampton Table.	Northampton Table of Dr. Price.	Church Ministers' Returns,	Northampton P. C. Bills, (Burials.)	Registration Returns of Deaths,
			1831–40	1838–44	1838–44
	Numbers dying at each age and under the age following:—				
0	3265	4367	3956	4083	4337
2	772	1034	1869	1370	1193
5	428	574	574	505	601
10	403	543	720	716	592

80	424	423	338	283	287
90	47	46	27	25	46
	Numbers dying at each age and upwards. If the population had been stationary, these would be of the born against 0, the numbers attaining 2, and each successive age:—				
0	10000	11650	12251	11806	11855
2	6735	7283	8295	7723	7518
5	5963	6249	6426	6353	6325
10	5535	5675	5852	5848	5724
20	5132	5132	5132	5132	5132
30	4337	4385	4257	4416	4411
40	3636	3635	3500	3454	3542
50	2858	2857	2789	2751	2867
60	2040	2038	2042	2036	2173
70	1234	1232	1167	1258	1174
80	471	469	365	308	333
90	47	46	27	25	46
	0	0	0	0	0

According to Dr. Price's Northampton Table, out of 11650 children born alive, 5132 attain the age of 20, the whole dying at the several ages shown in the *upper part* of this Table, col. 2. The numbers against the age 20 in Table I., namely, 2408, 563, 416, and 555, raised to 5132, and the other numbers in Table I., raised in the same ratio, constitute Table II.; that is, cols. 2, 3, 4, 5, in Table I. were multiplied by $\frac{5132}{2408}$, $\frac{5132}{563}$, $\frac{5132}{416}$, and $\frac{5132}{555}$, to form the corresponding columns Table II.

"*for Northampton*, from which may be calculated the true probabilities and "values of lives in that town."[1] "The Bills," he adds in a note, "give the "numbers dying annually between 20 and 30 greater than between 30 and 40; "but this being a circumstance which does not exist in any other register of "mortality, and undoubtedly owing to some accidental and local causes, the "decrements were made equal between 22 and 40; preserving, however, the "total of deaths between 20 and 40, the same that the Bills give them. The "Bills giving only the totals of deaths under 2 years of age, and between 2 "and 5, the proportions of deaths for every particular year between 2 and 5, "and for every *quarter of a year* after birth till 1 year of age, were made the "same nearly that the Chester Register makes them." A comparison of the col. 2, Table I., with the cols. 2 and 2 A of our Table II., will show the three steps of the process employed by Dr. Price. He probably deduced the lower series from the upper of col. 2, Table I.; the first number 4689 was raised to 10000, and all the following terms of the series in the same ratio, which gave the numbers 6735, 5963, 5535, 5132, 4337, &c., &c., of col. 2, Table II.[2] He lastly added 1650 (nearly one-sixth part, or ·1650) to the original radix 10000; made corresponding alterations at the subsequent ages up to 20; and to render the series more uniform took from the deaths returned at the age 20–30 to add to those at 30–40. The following is a summary view of the alterations Dr. Price introduced in the Table:—

1	2	3	4	1
Age.	Probably Dr. Price's *Original* Table.	Dr. Price's *Altered* Table.	Differences.	Age.
0	10000	11650	1650	0
2	6735	7283	548	2
5	5963	6249	286	5
10	5535	5675	140	10
20	5132	5132	. .	20
30	4337	4385	48	30
40	3636	3635	. .	40
—	This column is derived directly from the observations given by Dr. Price.	This column is a part of what Dr. Price called "the genuine Table of Observations for Northampton."	The excess in the 3rd column is nearly 1-12th at the age of 2, 1-20th at 5, 1-40th at the age of 10.	—

Dr. Price intended the additions to the Table under the age of 20 to be a correction of the original Table, for the immigrants who, he assumed, entered Northampton at the age of 20. Dr. Price's interpolation was a simple business, as the decrements from the age 21 to 40 were made uniform, and those

[1] Vol. ii., p. 97.

[2] The col. 2, Tab. II., was deduced from col. 2, Tab. I., by multiplying the numbers by $\frac{5132}{2408}$; and $4689 \times \frac{5132}{2408} = 9993$; but the first number has been made 10000 for the sake of clearness of exposition. The 5132 is the number living at 20, in Dr. Price's Northampton Table.

numbers attaining each age from 40 to 70 differ little from the terms of an arithmetical progression. Table III., cols. 2, 3, 5, 6 (pp. 332-3), contains the old and new Northampton Tables, both constructed from the deaths alone on the same assumption, that the population was stationary, and both erroneous to the extent of any error involved in this assumption.

The new Table from the deaths alone, col. 2 of Table III., was constructed from the outline Table, col. 5, Table II. The interpolation was effected by the method of differences, the application of which to this purpose will be elsewhere explained. The number 5132 against the age 20 in Dr. Price's Table, was made the starting point: in the process of interpolation this became 5143. In all other respects the Table was constructed and interpolated without any reference whatever to Dr. Price's Table. As no addition was made under 20 for immigrants, the general agreement is remarkable. The probabilities of living a year differ chiefly after 63. The *afterlifetime*, or expectation of life, the present values of annuities, and the premiums of insurance at each age, have been calculated by the new Table, and are found to agree closely with Dr. Price's Table.

Age.	[Mean] Afterlifetime.		Interest of Money, 3 per Cent.					
			Present Value of Annuity of £1.		Annual Life Premiums to insure £100 at Death.		Single Premiums to insure £100 at Death.	
	Price.	By New Table from Deaths alone.	Price.	By New Table from Deaths alone.	Price.	By New Table from Deaths alone.	Price.	By New Table from Deaths alone.
			£.	£.	£.	£.	£.	£.

The annual premium at the age 30 to insure £100, is £2 13*s.* 4*d.* according to the Table deduced from the returns of the last century (1735–80); and £2 13*s.* 1*d.* according to the Table now deduced from the returns of the 7 years 1838–44. The *afterlifetime* at 30 is 28·27 years, and 28·15 years by the same Tables.

The two Tables, which are almost identical, may be both correct or both erroneous. They can only be correct if the population of All Saints, Northampton, was stationary for nearly two centuries. I proceed to describe another New Northampton Life Table, constructed by a method not subject to any such condition; I do not say, with Dr. Price, "subject to no errors,[1]"—but certainly subject to errors of no magnitude to be compared with those that may arise from the hypothesis on which he constructed the Old Northampton Table.

[1] Tables formed from data of this kind "are subject to no errors. They must be correct, "whatever the fluctuations are in a place, and how great soever the inequalities may be between "the births and the burials."—*Price, Works*, vol. ii., p. 251.

We have returns of the deaths all over England for the 7 years 1838–44, as well as the ages of the population of each parish in the middle of the 7 years, (June 6–7, 1841); and have therefore the means of constructing a correct Life Table for the county, or town, or any parish of Northampton. To test the old Table now in general use, and the new Table constructed on the same plan, I have made the returns for the parish of All Saints the basis of the correct Table. The town of Northampton contains the county infirmary, the lunatic asylum, and the union workhouse; neither of them situated in All Saints' parish. As the deaths of persons sent sick out of a parish are properly a part of its mortality, I have obtained returns of the ages of the parishioners of All Saints who died in the infirmary, workhouse, and lunatic asylum, during the 7 years 1838–44, and the ages of those resident in 1845.[1] The numbers are few, but the deaths could not have been neglected without understating the mortality.

Tables IV., V., VI. (pp. 334-6), show the population of All Saints, the deaths at different ages, and the births for the 7 years 1838–44. The new Table from the deaths alone corresponding with that of Dr. Price, was framed from the facts in the *last column* of Table V. The Life Table with which we have at present to do was constructed from the births, the deaths, and the living enumerated at each age; and chiefly from the last columns of Table IV. and of Table V. It was not attempted to make separate Tables for males and females.

The 333 children who died under 1 year of age in the 7 years 1838–44, must all have been born in the 8 years 1837–44; and the aggregate number of children born alive out of which the deaths took place, would be correctly represented by the births in the 7 years from the middle of 1837 to the middle of 1844. All the births are probably not registered; but there can be little error in substituting the 1953 births registered in 1838–44 for the number in question. Of 1953 children born alive in All Saints, therefore, 333 died in the 12 months after birth, and 1620 survived; the number out of 10000 born, who live to see the first anniversary of their birth, is obtained by the rule of proportion thus:—

$$1953 : 1620 :: 10000 : 8295$$

So 1705 of 10000 die in the first year, and 8295 enter on the second year of age. Here the enormous error in the hypothesis on which the new Table from the deaths alone was constructed becomes apparent. The deaths at all specified ages were 1283, out of which number of children born alive by the said hypothesis the 333 children died; whereas it has been just shown that the children out of whom these deaths occurred were at least 1953 in number. According to the false hypothesis 2598 die, and only 7402 survive a year, out of 10000 born alive.

Proceeding to determine the mortality in the second year of age, we find by the Census 184 children living against the age 1; that is, aged 1 and less than 2 years of age, in the middle of the 7 years 1838–44, when 136 children died of the same age, that is, 19·43, or nearly 19 annually. If 19 died pretty nearly at equal intervals in the second year of age, 193·5 would be alive at the beginning, 184 in the middle, and 174·5 at the end of the second year of age;

[1] I am indebted to James Mash, Esq., House-surgeon to the Infirmary, to W. Tomalin, Esq., and to Mr. Wm. Cornfield for these particulars. The numbers and ages of the parishioners of All Saints, in the public institutions, 1841, could not be procured; no error of any consequence arises from substituting the numbers found in them in 1845

the numbers out of 8295 entering on the second year, who live to the end of it and enter on the third year, will be obtained by a second proportion :—

$$193{\cdot}5 : 174{\cdot}5 : : 8295 : 7481$$

So that, according to the law of mortality in All Saints, 7481, or more exactly (taking all the decimals into account), 7463 of 10000 children born alive, live to see their second birth-day. The same process carries us to the fifth birth-day. The numbers living and dying are henceforward given in quinquennial ages, and of 847 living, 65 die in the 7 years, or nearly 9 annually: the number 7463 is reduced at the age 5 to 6765, which multiplied by the fifth power of the fraction $\frac{842{\cdot}36}{851{\cdot}64}$ will give the numbers that live through the next 5 years to the age of 10. The same method may be pursued when the living and dying are taken in decennial ages, 20–30, 30–40, &c., to obviate the irregularities from errors in the ages, and in the small numbers. The probabilities of living in the middle of every 5 years up to 20, and every 10 years afterwards, were thus obtained, and the probabilities of living through each intermediate year were interpolated: thus the Life Table was framed. The results by other methods of construction which were tried are nearly the same. The Table (p. 348) is one of the outline tables worked out in logarithms, and ready for interpolation. The mortality at the several ages obtained by simply dividing the dying in the 7 years 1838–44 by the living, enumerated in 1841, is shown in the annexed Table:—

All Saints, Northampton: Mortality in the 7 Years 1838–44.

Age.	7 times the living in 1841.	Died in 7 Years.	Annual Mortality per Cent.	Age.
0–1	1568	333	21·237	0–1
1–2	1288	136	10·559	1–2
2–3	1442	74	5·132	2–3
3–4	1211	32	2·642	3–4
4–5	1127	23	2·041	4–5
0–5	6636	598	9·011	0–5
5–10	5929	65	1·096	5–10
10–15	5607	27	·482	10–15
15–20	6335	37	·584	15–20
20–30	11179	78	·698	20–30
30–40	7756	94	1·212	30–40
40–50	5327	73	1·370	40–50
50–60	3465	75	2·165	50–60
60–70	2044	108	5·284	60–70
70–80	889	91	10·236	70–80
80–90	168	31	18·452	80–90
90	7	5	71·429	90
All Ages	55342	1282	2·317	All Ages

The mortality, as is always the case, rapidly decreases from birth to the age 10–15; it then increases slowly to 50, but more than doubles afterwards every 10 years. The decennial divisions from 15–25, 25–35, &c., in Table (p. 321),

probably give more correct results. The mortality of All Saints is higher than the mortality of England, and higher than the mortality of the other parishes of the same sub-district.

We may now revert to Table III. (pp. 332-3). The columns 4 and 7 of that table are a true Northampton Life Table, constructed from the correlative returns for 1838-44 of the numbers living and dying at each age. The Table from the deaths alone in the same period (and which is the counterpart of Dr. Price's) is altogether erroneous; while the errors of its indications vary at different periods of life, as will be apparent from the following examples. To distinguish it from the other, it may be called the False Table.

The following is a summary view of the true and of the two false Tables; the starting point being the numbers living at the age 20:—

Age.	The old Northampton Table, by Dr. Price.	Graduated False Table of Mortality deduced from the Deaths, 1838-44	Life Table deduced from Population, 1841, and Deaths, 1838-44	Age.	The old Northampton Table, by Dr. Price.	Graduated False Table of Mortality, deduced from the Deaths, 1838-44	Life Table deduced from Population, 1841, and Deaths, 1838-44
	Dying.				Living.		
0	4367	4337	2145	0	11650	11855	8456
2	1034	1193	590	2	7283	7518	6311

50	819	760	759	50	2857	2906	3711
60	806	972	1349	60	2038	2146	2952
70	763	841	1055	70	1232	1174	1603
80	423	287	487	80	469	333	548
90	46	46	61	90	46	46	61

By the True Table it is an even chance that a child born alive will live more than 41 years; for of 10000 born, 5036 live to, and 4964 die before attaining the 42nd birth-day. The probable lifetime at birth is $41\frac{1}{2}$ years; that is the age which it is an even chance will be attained.

The False Table makes the probable lifetime at birth only $7\frac{1}{2}$ years; for in it 11855 children born alive are reduced to 5992 in 7 years, or to 5928, half their original number, in $7\frac{1}{2}$ years.

It is *probable* that a person of 20 will live to the age of 63 or $43\frac{5}{9}$ years; the False Table makes his prospect of life only 34 years and $\frac{3}{10}$ of a year.

At 60 the two tables nearly agree; the probable lifetime is $10\frac{50}{91}$ years by the True Table, and $10\frac{101}{112}$ years by the False Table; that is, nearly 11 years by both tables.

The *afterlifetime* at several ages, the values of life annuities, and the premiums to insure £100 at death by the true and the false Tables, are contrasted in the following Table. The interest of money is taken at 3 per cent. per annum; and in the money calculations and examples no allowance is made for expenses, fluctuations, or profits.

Age.	Afterlifetime at 7 Ages.		Values of Life Annuities of £1, at 7 Ages.		Annual Premiums to be paid for Life to insure £100 at Death.		Single Premiums to insure £100 at Death.

The answers to a few of the questions asked every day, and solved by Life Tables, will still further illustrate the errors of the False Table.

What is the mean lifetime or the duration of life?—Answer 37·57 years, or nearly 37½ years in Northampton. Answer by False Table 24·88 years.

What is the afterlifetime at 20, or the average number of years that persons of 20 live after that age?

Answer by True Table . . . . 39·93, or nearly 40 years.
Answer by False Table . . . 33·40, or nearly 33 years.

What is the afterlifetime at the age 50?—18·76 years by True Table, and 17·49 years by False Table.

B. wishes to purchase an annuity of £100 on the life of a child just born, what sum should he pay for it, reckoning the interest of money at 3 per cent., and no profits?

Answer by True Northampton Table £1708 10
Answer by False Northampton Table 1216 18
Difference . . . . . £ 491 12

John Edwards, aged 30, has an annuity of £1000 on his life, what is its present value?

Answer by True Northampton Table £19081
Answer by False Northampton Table 16961
Difference . . . . . £ 2120

How much should Thomas Godwin, aged 60, pay for an annuity of £1000?

Answer by True Northampton Table £9155
Answer by False Northampton Table 8949
Difference . . . . . £ 206

Edwin Gray, aged 20, desires to insure his life for £1000, what annual premium should he pay, leaving out of consideration any charge for expenses?

Answer by True Northampton Table £15 9 10
Answer by False Northampton Table 21 12 7
Answer by Northampton Table in common use . 21 15 10

What annual premium should James Just, aged 30, pay to insure £10000 at his death?

Answer by True Northampton Table	£206 14
Answer by False Northampton Table	265 10
Answer by Dr. Price's Northampton Table . .	266 14

What annual premium should Evan Lewis, aged 60, pay to insure £1000 at death?

Answer by True Northampton Table	£69 7 0
Answer by False Northampton Table	71 7 10
Answer by Dr. Price's Northampton Table . .	63 13 4

An annuity of £1000 is left in a legacy to a child aged 10, what is the duty?

The value by the True Northampton Table is .	£23396
The value by the False Northampton Table is .	20615

The duty, reckoning it at 10 per cent. on the value, is £2339 12*s.* by the True Table; £2061 10*s.* by the False Table; and £2066 6*s.* by Dr. Price's Table. Taking the interest of money at 4 per cent. per annum, the value of the annuity by Dr. Price's Table is £17523; the legacy duty at 10 per cent. is £1752·3. At the same rate of interest the legacy duty by the English Table is £1924·77. The legacy duty is still levied under 36 G. III. c. 52; in which the elaborate series of Tables of the values of annuities on single and joint lives are derived from the Northampton Table, reckoning interest at 4 per cent.

What sum paid down by John Jones, aged 20, will provide him a deferred annuity of £10 the first payment to be made, if he be alive, at the age of 61?[1]

Answer by True Northampton Table	£16 2 10
Answer by False Northampton Table	11 8 11

A child just born is to enter at the age 21 on an estate in which he has a life interest of £2000 a-year; what is the present value of his interest?

Answer by True Northampton Table	£13742
Answer by False Northampton Table	8524

Here it is assumed that the first annual rent is received on his 22nd birth-day.

The present value of £100000, contingent on a child just born living to the age of 21, is £32415 by the True Table; £22989 by the False Northampton Table; and by the Table of Dr. Price, in common use, £23348!

A person aged 30 lays by £100 at 3 per cent. compound interest, and the same sum at the beginning of every year, so long as he lives, to what will accumulations of this kind amount on an average? Formula $\frac{N_{20}}{M_{20}}$.

---

[1] Formula: $\frac{N_{x+1+y}}{D_x}$.—*See* Table, pp. 344-5; and Sixth Annual Report, 8vo., p. 594.

Here $x = 20$ = age at which the annuity is granted; and $y = 40$ = time for which the annuity is deferred.

The formula becomes $\frac{N_{61}}{D_{20}}$.

Note.—N_x in the English Table, and in the other Tables arranged by me, corresponds with N_{x-1} in Griffith Davies's Tables.—*See* the reason of this in Appendix to Registrar-General's Sixth Annual Report.

Answer, by True Northampton Table	£4838
Answer, by English Life Table (Males) . . .	4869
Answer, by False Northampton Table	3767

What is the value of the next presentation to a church living of £1375 a year, net income, the age of the present incumbent being 60?

Assuming that the age of the person to be appointed will be 30, and the interest of money 3 per cent. only, the present value will be £18477 by the True, and £16564 by the False Table.

The present value of £10000, receivable on the death of a child just born, is £4732 by the True, and £6164 by the False Table.

For an insurance of £1000, at the age of 40, the single premium is £538·42 by Dr. Price's Table, and £496·25 by the True Northampton Table.

John Williams, aged 30, insures his life for £1000, by engaging to pay an annual premium of £26·55 (or £26 11*s.*): he pays 10 premiums (£265·5), and when the 11th falls due, wishes to dispose of his policy. What is its value?

The question has two sides, according as we look to the past or to the future. He entered into a contract with the society at the age of 30, under which he has paid £26·55 a-year, or £265·5 to their exchequer: the society, under the same contract, incurring the risk of paying £1000 in the event of his death during the 10 years. In reference to this past period, he has paid the society more than has sufficed to cover the risk. Estimating the risk by the True Northampton Table, the excess, invested at the rate of 3 per cent. compound interest, amounts, at the end of 10 years, to £212·57.[1] In fact, a premium of £9·615 a-year would cover the risk.[2]

Looking forward to the future, he has engaged to pay the society £26·550 a-year for his life; the present value of which, at the age of 40, is £459·209. The life annuity is worth 16·296 years' purchase, to which adding 1 for the premium to be paid instantly, we have 17·296, to multiply into £26·550, which gives £459·209, or the sum in question. But the present value of £1000, at the death of this person, is £496·250. It is the actual value of his claim on the society, and is only £37·041 more than £459·209, the present value of his future premiums. If both parties, by mutual consent, dissolve the contract, the society only owes John Williams £37·041, regard being had to the future payments; while, if regard be had to the past, it has actually £212·57 in its possession to refund to the claimant. £26·55 is the annual

---

[1] Formula: $H_{x+y} = \dfrac{\pi N_{x|y} - s M_{x|y}}{D_{x+y}}$ = the sum to which the excess of any annual premium π, over that required to cover the risk commencing at age x of paying £ s, will amount in y years. The investigation of this formula will be given elsewhere.—*See* pp. 330-1.

Putting $s = 1$, and $\pi = \dfrac{M_x}{N_x}$ = the precise annual premium required to insure £1 on a life of the age x, we have the formulæ in common use:

$$H_{x+y} = \frac{M_{x+y}}{D_{x+y}} - \frac{M_x}{N_x} \cdot \frac{N_{x+y}}{D_{x+y}} = \frac{N_{x+y}}{D_{x+y}} \cdot \left(\frac{M_{x+y}}{N_{x+y}} - \frac{M_x}{N_x}\right)$$

$$= 1 - \frac{D_x}{N_x} \cdot \frac{N_{x+y}}{D_{x+y}} = 1 - \frac{1 + A_{x+y}}{1 + A_x} = (1 + A)(P - p),$$

the formula demonstrated by Mr. Milne (Treatise on Annuities and Assurances, vol. ii. sect. 501—509.)

[2] Formula $\dfrac{M_{x|y}}{N_{x|y}}$.

premium required to insure £1000, according to the False Northampton Table; and the conflicting results of the two methods of estimating the value of the policy arise from the annual premium being £5·88 higher than the premium (£20·67) by the True Table.

If the correct premium (£20·67) only had been paid, the excess of the premiums paid over the premiums actually required to cover the risks of 10 years would have amounted to £138·75; the amount of which sum payable at the death of a person now aged 40, is £279·6: this, added to £720·4, the amount of the future annual premiums at death, makes the £1000 insured at the failure of the life. Whether the valuation turn on the past or on the prospective payments, the policy is found in both ways to be worth the same sum of £138 15*s.*

By the methods in common use, the value of the policy, by Dr. Price's Table, is £115·73; by the False Table, £117·06. Both the valuations are manifestly erroneous.

The single premium to insure £1000 on a life at the age of 30, is £476·86 by the False Table, and £478·01 by Dr. Price's Table; at the end of 7 years, age 37, the policy is worth but £470·54 by the True Northampton Table.

These examples serve to show the enormous errors in the valuations of policies—and consequently of profits—involved in the use of the False and common Northampton Tables. I reserve the further discussion of these important, but somewhat intricate subjects, for another Report.

It has been shown that results deduced from the False Northampton Table, and from Dr. Price's Table, now in common use, are almost identical. It has also been shown that these Tables differ from the True Northampton Table in a degree that affects most extensively all the money transactions of which they are the basis. On comparing the values derived from the True Northampton Table with those set forth by Mr. Morgan,[1] it will be found that the experience of the Equitable Society indicates a somewhat lower mortality

Age.	After Lifetime.		Value of Life Annuities of £1.		Single Premium to Insure £100.		Annual Premium to Insure £100.

among the members than that on which the New Northampton Table is constructed. The annual premiums by the New Table would, according to the Equitable experience, insure £106 between the ages of 30 and 40, when the greatest number of lives are insured. The premiums, at these ages, by Dr. Price's Table insure £131, and at the age of 60 barely insure £100, according to Mr. Morgan's interpretation of the Equitable experience. It is probable that at the earlier ages, from the effect of selection, the mortality of the members of the Equitable Society was lower than the mortality of the class to which

[1] Appendix to second edition of "A View of the Rise and Progress of the Equitable Society," by William Morgan, Actuary to the Society.

they belonged. This was the opinion of Mr. W. Morgan. "Under the age "of 8," he says, "no assurances are made, and very few under the age of 20. "A Table, therefore, deduced from the experience of the Equitable Society, for "all ages, from birth to the extremity of life, must be entirely hypothetical "under the age of 20, not much to be depended upon from that age to 30, and "to a certain degree rendered incorrect by the continued addition of *new* "*assurances on lives* from the age of 30 to 50. For reasons already explained "(*see* page 42), the probabilities of life in the society, after the age 50, approxi- "mate to those in the Northampton Table [of Dr. Price]; and from the age of "60 and upwards they agree so nearly, as to prove the accuracy of both, and "to make it a matter of no consequence from which of them, at that advanced "period of life, the annual premiums are computed." The population of towns is kept up by healthy immigrants from the country, chiefly at the ages 15–35; it is a kind of selection, and has precisely the same effect in depressing the mortality, as the selection of the life offices at corresponding ages. Hence it is that the True Northampton differs from the Equitable experience pretty nearly to the same extent at all ages. It will be seen hereafter, that the *inequality* in the errors of the Old Table, referred to by Mr. Morgan, is the chief cause of the injustice of its use in mutual insurance societies.

Annual Life Premiums to Insure £100.

Age.	English Table.		Northampton True Table.	Carlisle (Milne.)	Equitable Experience.	Northampton Table of Dr. Price.	False Northampton Table.
	Males.	Females.					
	£.	£.	£.	£.	£.	£.	£.
20	1·597	1·555	1·549	1·494	1·517	2·179	2·163
30	2·054	1·963	2·067	1·952	1·967	2·667	2·655
40	2·731	2·575	2·869	2·599	2·687	3·398	3·393
50	3·873	3·627	4·202	3·622	3·992	4·530	4·620
60	6·129	5·734	6·935	5·790	6·302	6·366	7·139

The premiums of insurance by the New Northampton Table are a little higher than those deduced from other Tables, but the errors are on what the offices would consider the safe side.

The comparisons hitherto made, have been between the premiums of insurances for the whole term of life. The errors of the False Table, and of Dr. Price's Table, are still more striking in the premiums for short terms.

The premiums to insure £100 in the event of a life failing in the following year are as follows, at the ages 20, 30, 40, 50, and 60:—

Age.	By True Northampton Table.	By Equitable Experience (Morgan).	By Dr. Price's Northampton Table.	By False Northampton Table.	Age.
	£. s. d.	£. s. d.	£. s. d.	£. s. d.	
20	0 12 6	0 13 7	1 7 3	1 7 7	20
30	0 16 6	0 16 10	1 13 3	1 12 7	30
40	1 3 7	1 0 0	2 0 7	1 19 9	40
50	1 16 3	1 11 5	2 15 1	2 10 9	50
60	2 15 8	3 4 11	3 18 2	3 12 5	60

The Northampton Table of Mortality, by Dr. Price, does not express the mortality of All Saints' parish, of the town of Northampton, of the county of Northampton, nor of any other town or county either in the past or the present century. It was constructed, as has been already stated, upon the hypothesis

that the population of All Saints' parish was stationary in the 17th and 18th centuries. In rapidly tracing the growth of this small, but important inland town, we shall examine the grounds of this hypothesis, and, perhaps, be able to account for the errors of Dr. Price's Table, as well as to determine how far the New Northampton Table can be relied upon as a guide in insurance transactions.

NORTHAMPTON.

Northampton lies on the south slope of the uplands from which the Avon, the Charwell, and the Nene flow down to the Severn, the Thames, and the Wash of Boston. The rise of the town is involved in as much obscurity as the origin of these waters. Its site was the border of two British tribes—in front of a vast forest extending to the Welland. The Saxon Chronicle first calls it Hampton in the time of Edward the Elder, Alfred's son. "In 917, after Easter, the army of Danes *rode* out of *Hamtune* and Leicester." Hampton was a chief station of the Danes who had penetrated Mercia. A mound south of the town marks their camp. The road through Leicester kept open a communication with the Northmen beyond the Humber; East Anglia was near; the Nene flowed down to Peterborough, but was not then navigable. In 918, Earl Thurkytel, the "captains," and almost all the first men that belonged to Bedford, and many of those that belonged to *Hamton*, submitted to Edward. In 921 the army in Hamton and Leicester broke their parole; they unsuccessfully assailed Towcester, previously fortified by Edward. The "army" was defeated at Bedford and Maldon; and Earl Thurferth, the captains, and all the force that "owed obedience to Hamton, as far north as the Welland, submitted to him, and sought him to be their lord and protector."[1] The population of the town was probably mixed. For Edward commanded Nottingham to be repaired and occupied as well by the English as by Danes in 922. "And all the people who were settled in *Mercia*, *as well Danish as English*," says the Saxon Chronicle, "submitted to him."[2] Sweyn, in 1010, burnt Hamton, and carried away the spoils of the surrounding country. Canute traversed the county in 1015. In 1065, the Northumbrians, exasperated by the oppression of Tosti, marched under Morcar to Hamton, where they were joined by Edwin, his brother, a body of the men of his earldom, and many Britons. They here encountered Harold, who, though Tosti's brother, after a vain attempt to effect a reconciliation, came to terms with the insurgents, married Morcar's sister, and obtained from Edward the Confessor the government of Mercia for Edwin. Whilst Harold was away "on their errand," the Northmen, aided, no doubt, by the exasperated Britons, did much harm at Hamton; slew men, burnt houses and corn, took thousands of cattle, and led away hundreds of men with them; so that not only the shire, but others near it, were the worse for many winters.[3] When the country north of the Humber had been subjugated by William the Conqueror, Waltheof, Gospatrik, Morcar, and Edwin submitted; the brave Waltheof, son of Siward, became Earl of Northampton and Huntingdon, and, at the same time (1070), married Judith, the niece of the Conqueror. Waltheof, after the revolt of the Norman barons, in which he got involved, was executed in 1076. He left two daughters by

[1] Sax. Chron., an. 921. [2] Sax. Chron., an. 922.

[3] Saxon Chronicle, by Ingram, under the years 917, 918, 921, 1065; Henry of Huntingdon; Roger de Hoveden. Thierry's Conquest of England, by Hazlitt, vol. i. pp. 142-43; and 230-31.

Judith; the eldest, Maude, married Simon de St. Liz [Senlis],[1] who was one of two brothers, the sons of Raundoel le Ryche, valiant knights, who had come over with William the Bastard. Garner, the first-born, on the death of Raundoel, returned to France, and obtained the inheritance of his father. William wished Waltheof's widow to marry Simon; she scornfully rejected him because he was lame; and the king gave him her daughter Maude in marriage, with the whole honour of Huntingdon. Simon and his young wife, [18 Will. I., or 1084,] that "they might not at the day of judgment, before all bystanders, appear with empty hands," granted the church of All Hallows, and the other 9 churches of the town (villa), with their appendages, an estate of 3 carucates in the same town, 3 meadows, a holm (hulmum), and some houses (hospites), 20 shillings of the farm of the town, &c., to St. Andrew's Priory, which Simon, called the founder henceforward, submitted in perpetuity to the House of St. Mary de Caritate, on the Loire. In the time of Henry I. Simon went to the Holy Land, died, and was buried on his return at the Caritatem.[2] Henry gave Maude to the patriot David, subsequently King of Scotland, and the brother of Edith, who was afterwards called Matilda, Henry's Saxon Queen. David, then Earl of Northamptonshire, succeeded Alexander in May, 1124; and retained the English earldom.[3]

The town is called Northantone, and contained 330½ houses at the time of the Domesday survey (about 1084); when 35½ of the houses were empty, 295 inhabited. Of 60 burgesses in the time of Edward the Confessor having so many messuages (mansiones), 46 remained, the houses of 14 lay waste; besides these, 40 in the new town held of King William; 41 inhabited and 6 waste belonged to the warlike Bishop of Constance and 6 more ecclesiastical proprietors; Earl Morton had 35 inhabited houses, 2 waste; William Peverel, the Conqueror's natural son, who married Adelisa, and founded the Abbey of St. James for black canons, had 29 inhabited houses and 3 waste; the Countess Judith, William's niece, who married and betrayed Waltheof, had 15 houses inhabited, *one* waste. The majority of the houses belonged to proprietors of apparently Norman origin; leaving only a few inhabited and uninhabited houses, the property of proprietors of Saxon or Danish name. The annual value ranged from 4*d.* to 16*d.*; from 1*s.* to 4*s.* in weight of silver. Exclusive of the burgesses' 86 houses, the rent of 230½ houses, of which 21½ were *waste*, and 2 paid nothing, was 211 shillings and 8 pence; which is equal in weight of silver to nearly 3 shillings a house of our present coin. A sheep and its fleece would have paid the rent of 2, a quarter of wheat of 3 houses. One house was in the hands of Angsger, the King's chaplain, "of which the King ought to have the soke;" and 1, at a rent of 16*d.*, was held in fee of Robert de Todeni, by *Durand*, the bailiff. Nearly all the houses were probably of wood or of watling, plastered over with clay, without chimneys or glass windows. The uninhabited houses soon fell into ruins; in the Domesday they are said to be waste (vastae). The little labour they cost and the frail construction of the Saxon towns may be inferred from the haste and ease with which they were erected. Edward the Elder took Bedford in the year 919; he staid there four weeks, and commanded the town to be built, before he went thence, on the south side of the river. His enemies assailing him from the north, it was his policy to have a friendly population south of the river. Before Midsummer, 920, he

[2] Dugdale's Monasticon, vol. v. p. 190. Carta Simonis primi comitis.
[3] Saxon Chron., 1124.

built and fortified Maldon.[1] In 921 he repaired and rebuilt Huntingdon; and built the town of Gladmouth. In 922 he went to Stamford, and commanded the town to be built on the south side of the river; the people subject to the northern town sought him to be their lord. He commanded the wall to be built, Manchester to be repaired, in 923; went with his forces to Nottingham in 924, and "commanded the town to be built on the south side of the river, over against "the other; and the bridge over the Trent, between the two towns; then went "into *Peakland* to Bakewell, and there commanded a town to be built and "manned."[2] The facility with which towns were destroyed and burnt down is evidence to the same effect. The force of the high winds was "apparent in *all woods and towns*."[3] The burgesses of Northampton paid £30 10*s*. (= £88 9*s*. in weight of our present money) yearly to the sheriff for the farm of the town. The Countess Judith had £7 issuing from the profits of the borough. The bailiff Durand, the profits of the borough, and the payment for the farm of the town to the sheriff, imply certain municipal arrangements, if not institutions; and the town shortly after and probably now contained All Saints, and 9 other churches.[4]

Simon de St. Liz not only founded the Priory of St. Andrew, but surrounded the town with walls, and what proved of more importance in its history, built a castle, with a large keep, hard by the West Gate.[5] Henry I. was at Northampton in 1106, (now called Norþ hamtune, in the Saxon Chronicle, for the first time, as it appears South-hampton, hitherto also called Hamton, had risen to some importance). Robert, the king's brother, came here from Normandy; and because the king would not give back what he had won from him in Normandy, they parted in hostility.[6] In the same year Robert was carried a captive to Cardiff Castle. After the loss of his son in the *Blanche Nef*, Henry revisited Northampton (1122 [7]), and there celebrated with great pomp the festival of Easter. At a Parliament assembled by him in 1131 the barons swore homage to his daughter Matilda. The son of Simon de St. Liz, however, followed the interest of King Stephen, who held a council here in 1136. The son of Simon died in 1152-3. He was a young man, Camden says, guilty of every irregularity and impropriety.[8] His son Simon succeeded him. Henry II. summoned Becket to the council held at Northampton (1164). The Saxon archbishop, pronounced by king, lords, and prelates a perjurer and traitor, but favoured by many townsmen and clergy, was entertained at St. Andrew's Priory, whence he withdrew privately, and would not hear the sentence pronounced on him by the king and council for refusing to submit to the Constitutions of Clarendon. A beautiful spring in the town is known to this day as Thomas à Becket's Well. Anketil Mallore, the Constable of Leicester, one of the partisans of Prince Henry, advancing to Northampton at the head of a force, defeated the burgesses with the king's troops, and besides the killed, carried off 200 of the inhabitants prisoners.[9] The king suppressed the rebellion: William, King of Scotland, taken prisoner at Alnwick, was brought here; and Roger de Mowbray, Earl Ferrers, the Bishop of Durham, Anketil Mallore, and William Dive, Constables of the Earl of

Leicester, attended to surrender the several castles which they held against the king (1174). Councils sat at Northampton in 1176 and 1177: in the latter, where the assembly was mixed and numerous, Henry restored to the Earl of Leicester his forfeited lands.[1] A convention of barons and prelates (1180) was held, to amend and enforce the Constitutions of Clarendon. The kingdom was divided into 6 circuits, each to be visited by three judges (1179).[2] In 1185 the burgesses suffered a fine of 200 marks (£386 of our coin), to hold of the king in capite; and it is believed obtained a charter. In the first year of his reign Richard Cœur de Lion granted a charter to the burgesses of Northampton (1189). He conceded that none of them should plead without the walls of the borough except pleas of outholdings; that they should be quit of toll and lastage throughout all England; and enjoy all the free customs and liberties of citizens of London. He granted them the town of Northampton, with all its appurtenances, in fee farm, at an annual rent of £120 (= £349) a-year.[3] A hundred years before, at the Domesday Survey, the farm of the town was £30. The pound of silver, at both periods, bore about the same proportion to the pound of the present time, or nearly 2·906 to 1; and after the Conquest a mark was 2-thirds of the pound = £1·937 of our coin.

Richard, soon after his return from captivity (1193), kept the Easter at Northampton, where he entertained King William of Scotland.[4] A mint existed in the town. On his death (1199), the barons assembled there and swore allegiance to John,[5] who, 10 years after, removed his exchequer from London to Northampton. The burgesses, in 1200, gave 241 marks and 2 palfreys, worth 10 marks, for the farm of the town and for the confirmation of their liberties. The king paid, among other items in 1201, 5 marks for the repair of his houses in the castle, and 6*s.* to the serjeants who brought the heads of 6 outlaws; 9*d.* a-day to the engineer, and 30*s.* for a robe for the engineer's wife. In a charter granted by John, the burgesses were allowed to elect a *reeve*. At the Council of Northampton, John was excommunicated by Pandulph and Durand (1211), the Papal Legates. The barons laid siege to the castle; and after 14 days, expended in a fruitless attempt to take it, retired: it was, however, one of the castles placed in their custody on the signing of Magna Charta (1215). In the bloody reaction, and the war at the close of John's reign, the enmity of the town and castle broke out; the townsmen killed many of the garrison under the command of Fulk de Breant, then a resolute royalist.[6] The soldiers, in retaliation, burnt a great part of the town (1215).[7] In the second year of Henry III., the king was entertained here by Fulk de Breant, who had the year before plundered St. Albans. In 1224 Henry hanged William, Governor of Bedford, the brother of Fulk, who had thrown the itinerant justices into prison. Fulk himself was soon after sent out of the country, and sworn never to return. In the 11th year of this reign, 1226–7, Henry exacted, by way of aid, 5000 marks from London, and 1200 marks (£2324 of our coin) from the burgesses of Northampton, besides the fifteenth generally levied. He allowed the town (1238) to purchase lands to the value of £40 a-year (£116); he celebrated Christmas at the castle in 1245,[8] and presented the inhabitants with 10 marks (£19⅓), to purchase books

for a library. In 1252 the Sheriff of Northampton was ordered to have white glass, painted with the story of Dives and Lazarus, placed in the castle windows.[1] The town had charters from the king in the 11th, 23rd, 39th, 41st, and 52nd years of his reign. The *mayor* was made escheator, and had the returns, to the exclusion of the king's sheriffs and bailiffs.[2] The fair, which had been held in All Saints' Church and church-yard, was ordered to be held in some other place, 1235-6. In this reign the men at the Universities of Oxford and Cambridge quarrelled. A Welsh student in Oxford shot a servant of the Pope's Legate dead in 1238; quarrels subsequently arose between the scholars and the town, between northmen and southmen; many scholars left Oxford, and went to Northampton, where they fought bravely against the king, when he invested the place. Some Cambridge scholars subsequently joined them about 1258, and they began a University, with the leave of the king. Fuller commends "their judgment in the choice of so convenient a place, "where the air is clear, yet not over sharp; the earth fruitful, yet not over "dirty; water plentiful, yet far from any fennish annoyance; and wood "(most wanting now of days), conveniently sufficient in that age. But the "main is, Northampton is near the centre of England; so that all travellers "coming thither from the remotest parts of the land, may be said to meet by "the town in the midst of their journey, so unpartial is the situation of it in the "navel of the kingdom." The king believed the university would improve the town; but Oxford, the centre of the royalist forces, and only 30 miles away, was alarmed, and complained of the injury (quod * * non mediocriter læderetur); to avert which, Henry, four years afterwards, by letters patent, addressed "Majori et civibus suis," ordered the Northampton university to be abolished, and the scholars to quit.[3]

The civil wars had broken out again in 1263, and the Royalists made the first attack on Northampton, which was defended by Simon de Montfort (son of the Earl of Leicester), with many of the principal barons of that party. Henry invited them to a parley from the walls; and in the meantime near St. Andrew's Monastery, possessed by alien monks, a breach being made in the walls by Philip Basset and some pioneers, the place was carried by assault, and both the governor and the garrison were made prisoners, 1263–4.[4] After the defeat of Henry and Prince Edward at Lewes, by the Earl of Leicester, the castle was retaken (1264); and the Montforts there celebrated a brilliant tournament.[5] Burgesses were now summoned to parliament. "The earliest writs of summons "to cities and boroughs of which we can prove the existence are those of Simon "Montfort, bearing date 12th of December, 1264."[6] Edward held a parliament at Northampton in 1266; some rebellious barons were deprived of their estates; and Simon de Montfort was banished. Prince Edward on Midsummer Day, in the 52nd year of his father's reign (1267-8) with upwards of a hundred knights, here assumed the Cross before his departure for the Holy Land. The Jews of Northampton were fanatically accused in 1279 of having crucified a boy on Good Friday. Two citizens from London, and twenty other towns, including Northampton, were summoned by Edward I. to the parliament of Acton Burnell (1283-4). In 1298 the burgesses of North-

ampton were commanded by writ to choose two representatives to meet King Edward in York. Edward I., in 1294, took all the estates of the *alien priories* into his hands, allowing each monk 1*s.* 6*d.* (= £·217) a-week, on which Fleetwood supposes a monk might then live tolerably well. Edward I., and Margaret, his queen, kept their Christmas at Northampton in 1300; parliaments were there assembled in 1317 by Edward II.; in 1338 by Edward III., represented by the Black Prince; on 5th November, 1380, by Richard II. The last parliament held in Northampton passed the poll-tax of 3 groats, which led to Wat Tyler's rebellion. It is said to have met in the chancel of All Saints' Church.[1] This parliament sat 33 days; the knights of the county received 4*s.* a-day, which was equal in our coin to £·515, or nearly 10*s.* 4*d.*, and would then purchase half a quarter of wheat; those of Bedford and Buckingham received the same pay for 35 days; those of Lancashire had pay for 48 days; those of Northumberland for 51 days. In 2 Edward III. parliament sat 20 days; the knights of Norfolk and burgesses of Norwich had 28 days' wages; those from Cornwall 32 days, of which 12 were for going and returning: burgesses were allowed 2*s.* a-day.

By a charter of 8th Rich. II. (1384–5), the assize of bread, wine, and beer, the survey of the weights and measures, and the cognizance of forestallers and regraters were confided to the mayor.[2]

An Act of Parliament (the 9th Henry VI.) was obtained for paving the town at the expense of the inhabitants.[3] 23rd Henry VI. (1444–5); the town obtained its first charter of *incorporation*,[4] under the title of the mayor, bailiffs, and burgesses. The burgesses had power to elect one of their co-burgesses as mayor. Simon Bardfield was sworn into office in the town in 1478. In the same year a conduit supplied by pipes from a spring in the field east of the town, was erected southward of the market-place. The mayor, John Fox, was charged by a woolman, Richard Stormesworth, with favouring the doctrines of Wickliffe when they were first promulgated, and with harbouring James Collyn in his house, the first maintainer of Lollardy in Northampton (16th Rich. II. 1392–3).[5] A great battle was fought on July 10th, 1460, between Henry VI. and the Yorkist army, under March, Warwick, and Falconberg; Henry was taken prisoner; Buckingham, Shrewsbury, Beaumont, Egremont, and 10000 men were slain. In 1469–70, Earl Rivers and Sir John Woodville, the father and brother of the queen, were captured in the county, and beheaded at Northampton. The Duke of Gloucester, afterwards Richard III., met Earl Rivers and Lord Gray here in 1483, and obtained possession of the young king, then thirteen years of age.

With the civil wars the power of the castle—with the progress of opinion the influence of the priory—declined, and Richard's affectation of popular measures, if it did not secure the support of the north and Northampton, left them disaffected to his successor Henry VII. Morton had, in the opening of Parliament, 1487, said: "His Grace seeth that it is not the blood spilt in the field that will save the blood in the city; nor the marshal's sword that will set this kingdom in perfect peace; but that the true way is to stop the seeds of sedition and rebellion in their beginnings; and for that purpose to devise laws against

riots and unlawful assemblies of people, and all combinations and confederacies of them, by liveries, tokens, and other badges of factious dependence; that the peace of the land may by these ordinancies, as by bars of iron, be soundly bound in and strengthened, and all force, both in court, country, and private houses, be suppress."[1] An insurrection broke out in the north; the Duke of Northumberland was killed: it was suppressed, and the leaders were hanged at York. Leicester and Northampton had shown symptoms of disorder; and advantage was taken of it to alter the popular constitution of the boroughs. It appears to have been the design to supply the place of the castle and the priory by a burgess aristocracy, with exclusive privileges. In the fourth year of the king's reign (1488–9), a mandate was directed to the mayor, reciting that "at every election of a mayor or a burgess of the parliament, or at assessing of any lawful imposition, the commonalty of the said town, as well poor as rich, have always assembled at the common hall; that such persons be of *little substance or reason, and not contributors*, or else fall little to the charge sustained in such behalf, and have had great interest through *their exclamations and hedyness*, to the subversion, not only of the good policy of the said town, but likely to the often *breach of the peace*, and other inconveniences increasing, and causing the full misery and decline of our said town, and to the great discouragement of some of the governors there."[2] The popular constitution was annulled for nearly the same reasons as 50 years before were alleged in the preamble of the Acts which disfranchised all but the 40*s*. (= £3·874) freeholders;[3] that is, freeholders possessing land worth four or five quarters of wheat a-year.

The inhabitants were greatly dissatisfied; and at the next election, after the promulgation of the decree, insisted on their former privileges in a tumultuous way. The decree was in consequence enforced by an Act of Parliament, which enacted that the mayors, bailiffs, and other officers should be elected, and all charges assessed by the mayor, such persons as had been mayors and bailiffs of the town before, and 48 other persons nominated by the mayor, and his brethren who had before been mayors. Before this period the mayor and bailiffs were elected by all the freemen, in St. Giles's Churchyard.[4]

Henry VIII., a little before the dissolution of religious houses, despatched his librarian, Leland, on a tour of inspection through England. His commission was dated the 25th of the King's reign (1533-4). He visited Northampton, and left these Notes in his Itinerarium:[5]—"The towne of Northampton stondeth on the north side of the Avon Ryver [the Nene],[6] on the browe of a meane Hille, and risith still from the south to the north. *At the old Building of the towne was of Stone, the new is of Tymbre.*

"There be in the walls of Northampton four Gates.

"The Castle stondeth hard by the West Gate, and hath a large Kepe. The area of the residew is very large, and bullewarkes of Yerth be made afore the Castelle Gate.

"Paroche Churches in Northampton withyn the waulles be 7; whereof the

[5] Edit. Hearne, vol. i. pp. 9, 10.

[6] Tacitus mentions the rivers Antona, Aufona, and Sabrina. The first, believed by some to be the Nene, is retained in the name used in Domesday—"*Northantone.*"

Church of Al-Halowes [All Saints] is principale, stonding yn the Harte of the Toune, and is large and welle builded.

"There be in the Suburbes 2 Paroche Churches, whereof I saw one yn the west Suburbe as I rode over the weste Bridge, fairly archid with Stone, under the which Avon itself, not yet augmented with Wedon water, doth ren.

"There is a Chapelle of St. Caterine sette in a Cemiterie in the toune, longing to the Church of Al-Hallowes, where that paroch dooth byri. And I saw the ruins of a large Chapelle withoute the north gate."

Leland mentions "St. Andreas" *the late* [priory] of Black Monks, White Friars, and Grey Friars; the Hospitals of St. John and St. Thomas. "The Gray Freres House was the best builded and largest House of all the places of the Freres."

St. Andrews, the great house of Cluniac Friars, looked on with no friendly eyes by Dr. Layton, is thus described in a letter to Lord Cromwell:—"At Saint Androse in Northampton, the Howse is in debt gretly, the lands sold and mortgagede, the fermes let out, and the rent received beforehand for 10, 15, or 20 years. Chantreys fownded to be paid out of the lands, and great bonds of forfaitures thereupon for non-payment. The House is 400 pounds in revenewes. Jhan *Petie*, the prior now, is a bachelor of divinitie, a gret husbonde, and a good clerke, and petie it is that ever he came there. If he were *promoted to a better thing*, and the king's grace would take it into his hands, so might he recover all the lands again, which the prior shall never."[1]

The quiet play on Petie's name, the politic way in which the head of the house was to be gained over, and the cogent reasons for seizing the possessions, are characteristic of the times and the men; but the mismanagement, improvidence, and anticipation of the revenues are easily conceived, as they have been perpetuated more or less in the English Church down to the present day. The priory was surrendered in 1538, and the prior was made first Dean of Peterborough Cathedral. Thus fell, probably without great regret on the part of the town, this house of friars, which had been founded and peopled nearly 500 years before by the Count de St. Liz and Maude; which held all the churches of Northampton under grant, and innumerable possessions besides. Its revenues were rated, on its surrender, only at £263 clear. The lease of the edifice, with one watermill, &c., was renewed at survey by the Commissioners 29 Henry VIII. (1 March, 1536) at £4, a field of 6 acres at 8*d.* an acre, and others at the same rate.[2] The house and the demesne lands, of nearly 700 acres, were granted by Edward VI. to Sir Thomas Smith. It was in this way "the lands were recovered again." The House of Grey Friars, founded 1245-6, and supported by the town; the House of the White Friars, founded 1271, by Simon de Montfort, with Thomas Chetwood; and the House of the Dominicans, founded about 1240, by John Dalyngton, were also surrendered in 1539. Five guilds and fraternities are mentioned in the Survey of 1548.

Northampton, as well as several other places, had fallen into decay, either in consequence of its ceasing to be a resort of the Court, or of the Civil Wars, or of Henry VIIth's interference with the free government of the town, which was now vested in a self-elected body. Leland remarked that the old buildings were of stone, the new of wood. A worse state of things is depicted in the preamble of an Act of Parliament, 27 Henry VIII. c. 1 (1535-6). "Forsomoche as dyvers and many Howses, Messages, and Tenementis of Habitations

[2] Book of the Demaynes of St. Andrew's.—Dugdale's Monasticon.

in the Towns of Notingham, Shrewsbury, Ludlowe, Brydgnorth, Quynborowe, *Northampton*, and Gloucester, now are, and of long time have bene in great ruin and decay, and specially in the principal and chief streets there being, in the which streets have been beautiful dwelling houses there well inhabited, while at this day much part thereof is desolate and void groundis, with piteous cellars and vaults lying open and uncovered, very perilous for people to go by in the night without jeopardy of life." * * *

The Act proposes a strong measure, which throws light on the tenures of that time. "For remedy whereof be it enacted, that if the *owners* within 3 years after proclamation by the mayors, sheriffs, or bailiffs, do not sufficiently re-edify and build the *houses*, it shall be to the *lords* of whom such vacant ground is holden to enter immediately, and have it to them and their heirs for ever." If the said lords do not re-edify the building on the vacant ground within 3 years, the mayors, sheriffs, bailiffs, or commonalty of the towns are to have and to hold it for ever, clearly discharged of all rents going out of the same; if the mayor, &c., do not build, then the ground is to return to the first owner. Granting that this measure was calculated to increase the number, it was not likely to improve the quality of the houses.

Henry VIII. had an opportunity of seeing Northampton in 1540, when he passed through the town on his way to York. It was settled by the corporation, in 1550, that every shoemaker, who set up a shop in the town, should pay 30*s*., namely, 26*s*. 8*d*. to the mayor and chamberlain, 3*s*. 4*d*. to the fraternity.[1] Queen Elizabeth visited the town in 1564, and was received in state. She was presented with £26 by the magistrates on her departure. The people spent the rest of the day in bull and bear baiting. The town has still a *Bearward*-street.

When it was enacted that the Church of England should no longer be subject to the Pope, Thomas Cromwell was appointed the King's Vicegerent for Ecclesiastical Jurisdiction; and in that capacity issued certain injunctions to the clergy in the year 1538. The minister of every church was to keep a book, and to register births, deaths, and marriages. In 1547 (1 Edw. VI.), visitors enforced this among other injunctions. Under Elizabeth, the clergy had to make a protestation, in which they promised to keep the Register Book in a proper manner. The canons, which date their authority from 1 James I. (1603), prescribe very minutely in what manner entries are to be made in the parish registers, and order an attested copy to be transmitted annually to the bishop of the diocese or to his chancellor. Mr. Rickman states that 812 of the registers of English parishes commence in 1538; 1822 from the year 1538 to 1558; and 2448 from 1558 (when Elizabeth's "protestation" was brought into operation) to 1603. From this latter period the Northampton Registers date; the parish of St. Giles from 1559; of All Saints from 1560; of St. Sepulchre (marriages) from 1566, (baptisms and burials) from 1571; St. Peter from 1578 for burials and marriages, 1596 for baptisms.[2]

Northampton gave birth to Fletcher the dramatist, S. Parker bishop of Oxford, Thomas Cartwright bishop of Chester, William Shipley, projector of the Society of Arts, Manufactures, &c. It was also the birth-place of Brown, the founder of the Brownists. Robert Brown, the son of Antony Brown, of Tolthorp, in Rutland, was born in Northampton.[3] His family was ancient,

[3] Collier, Hist. Dict.

and he was nearly allied to Lord Treasurer Cecil. He studied at Cambridge; fell into the opinions of Cartwright, the bitter enemy of hierarchies;[1] refined upon Cartwright's opinions, and inveighed against the Church of England. He first preached in Norwich in the year 1581, where many Dutch Anabaptists had settled. He was convened before the Bishop of Norwich and imprisoned. Lord Burleigh wrote to the bishop on behalf of his kinsman, suggesting that he was actuated by zeal rather than malignity. Brown was liberated, and placed in the hands of Archbishop Whitgift; a slight impression was made on him, and he was sent home with a letter from the Lord Treasurer, who, however, shortly after, in another letter to the father, sanctioned the repudiation of a son who would no longer be a son of the Church. Brown published a Treatise on *Reformation without waiting* in 1582. He wandered up and down the country, was committed to more than thirty prisons, in some of which "he could not see his hand at noon day," and enduring great hardships, went at length to live at Northampton, where he met with sympathy and support. He was industriously labouring to establish his sect, when Lindsell, Bishop of Peterborough, sent him a citation to appear before him, which Brown refused to obey. He was excommunicated. This last stroke produced such an effect on his mind that he was induced about 1590, at the instance no doubt of his noble kinsman, to accept the rectory of Achurch, Northamptonshire. "His parsonage," says Fuller, "he freely possessed, allowing a sufficient salary for one to discharge the cure; and though against "them in his judgment, was contented, and perchance pleased, to take the "tythe of his own parish."[2]

It is perhaps the only instance in which the founder of a religious sect has been the first apostate from its ranks; for such men do not often find a statesman of Lord Burleigh's insight, power, and perseverance to take an equal interest in their orthodoxy. The same overruling policy that by keeping Elizabeth a virgin queen, imprisoning Mary, and bringing her to the block at Fotheringay, made her son a Protestant, and placed the crown of England and Scotland on his head, pursued Brown; first by kind personal interference, Whitgift's eloquence, paternal influence; then by persecution, imprisonment, starvation, the terrors of excommunication—the allurements of a quiet church living: and finally triumphed over the founder of a sect which one day was to number among its members Cromwell, Milton, and the Independents.

The Brownists ridiculed the questions put to infants in baptism, denounced the promises made by godfathers and godmothers, and would not allow any children to be baptized whose parents were not "members of the church." They insisted that the churches were independent, and should have the choice and the power of dismissing their own pastors;[3] they allowed laymen to take

---

[1] Fuller slily traces this to a slight passed on Cartwright by Elizabeth, who, in the Philosophy-Scholar Act, favoured his rival disputant, Preston, "with her looks, words, and deeds," calling him her scholar—scholarem suum. Preston was "a handsome man," and "had dealt with the Graces"—Cartwright with the Muses. Cartwright's preaching, however, filled St. Mary's Church; and once, at evening prayer, "all the scholars, save three, cast off their surplices, as an abominable relic of superstition."—Fuller, Univer. Cambridge, anno 1567.

[2] Fuller, who says he was born near Brown's residence, introduces as usual a good deal of antithetical raillery in the life: thus—"He had in my time a *wife*, with whom for many years he never lived, parted from her on some distaste; and a *church* wherein he never preached, though he received the profits thereof."

[3] Episcoporum tantum authoritate et potestate ministri non sunt creandi; multò minus in musæo aut loco quopiam clanculario; *sed ab ecclesia electio fieri debet:* was one of the propositions set down by Cartwright, when summoned by Vice-Chancellor Whitgift to give an

a part in the ministry. Brown lived to the age of 80, and though driven into a living, his life was a stronger argument than any he had written in favour of his doctrine. He also died the first *rate*-martyr. His godson, the constable of the parish, called upon him one day, and somewhat rudely required the payment of a rate. Brown refused to pay it, and was carried before a neighbouring justice, who, in return for some mild expostulation, only received abuse. The infirm fiery old man was carried on a feather bed in a cart to Northampton Gaol, where he soon sickened and died [1].

The Puritans, in the reign of Elizabeth, had many abettors both in the town and county of Northampton, disaffected to the doctrine and liturgy of the Church of England. They had frequent conferences here relating to the *Book of Discipline* and other matters.[2] The town was a stronghold of the Independents and Baptists in the seventeenth century.

Camden, in 1607, after remarking that Northamptonshire is a plain well-peopled county, adorned with the seats of nobility, and full of towns and churches, says, "the *town itself seems to have been built entirely of stone*, has handsome buildings, is large, and surrounded by walls from which one has a prospect of a spacious plain every way."[3] Camden refers to the depopulating effects of enclosures; and this year the country people rose, and attempted to destroy the enclosures of the commons of the county, without exercising any other kind of outrage. Reynolds, the leader of these "levellers," called Captain Pouch, was hanged.

Plague, which ravaged London in 1636, where 23359 persons died, appeared the year following in Northampton, when 500 persons perished in 5 months. (?)

Northampton in the civil wars sided with the Parliament. In 1642 it was garrisoned under Lord Brooke; the walls were repaired, the fortifications strengthened. Saltpetre collected out of the old cellars in the town was converted into powder at the mill on the brook in Cowmeadow. (?) The county raised £5000 and 300 horse, and, on the approach of the Cavaliers, the fortress "played against them" with two pieces of ordnance. The Earl of Essex arrived on September 9, 1642, at the general rendezvous in Northampton, where 15000 men were assembled. Lieut.-General Cromwell was here, with a good body of horse and foot, in March, 1645. His foot marched through without shoes and stockings in 1648; the town readily sent 1500 pairs of its useful staple after him to Leicester. Fairfax, at the head of 6 regiments and 500 dragoons, carried through the town £200000 to the Scotch army in 1647.[4] The military levellers, after the beheading of Charles, with two troops of horse, under the command of one Thomson, seized the ordnance, magazines, and monies lodged at Northampton, where many joined them in 1649. They were speedily subdued by Cromwell. In 1662, by the King in Council, the walls of Northampton were ordered to be demolished; part of the castle was taken down and the site was sold. The priory and the castle raised by the feudal baron of the Conqueror were destroyed by the Crown. To make all things new, one catastrophe was wanted.

Leland, in 1535, states that the old houses were of stone, the new of wood; to Camden, in 1607, "the town itself seemed to have been built entirely of

[4] Fairfax MS., late in the possession of John Newington Hughes, Esq., Winchester

stone;" and the secretary of Cosmo, the third Grand Duke of Tuscany, who visited the town in his travels (1669), describes the streets and buildings as in a respectable style of architecture, the greater part built of stone and earth, and a good deal ornamented.[1] A writer in 1675 says, "Northampton might well contend with the best inland city or town that is not seated upon a navigable river, for sweet and wholesome air, pleasantness of situation, plenty and cheapness of corn and butchers' meat, good ancient buildings, dry and commodious cellarage, broad and cleanly streets, a spacious market-hill, fine and profitable gardens and orchards within the walls, while it was beautified and honoured with their standing." This was its "figure and situation as it stood and flourished."

Shortly after noon, on Monday, the 20th of September in that year (1675), the cottage of a "common woman," who lived in a lane at the upper end of St. Mary's Street, took fire. The street was full upon the wind, far from help, and from the principal part of the town, "which was to be the theatre of judgment," and consisted of the poorer sort of houses, thatched with straw. The hideous cry of "Fire! Fire!" came up post to town; but when some heard that it was so far off, and in meaner dwellings, they made light of it. Within an hour the last house at the opposite eastern quarter of the town was in flames; the owners of the wares and goods, which covered the spacious market-hill, were enclosed by a wall of fire, and narrowly escaped through a small door in the only house of the square left standing. In six hours the chief part of the place was consumed. The mayor passed the night under a shed: next morning the town lay reeking and burning everywhere, and apprehensions were entertained of a fresh outbreak, when *three* rainbows appeared in the heavens, the harbingers of a great shower which fell and quenched the fire. Six hundred houses, in which 700 families dwelt, All Hallows Church, and the market cross, were burnt down. The trades-people had laid in a larger stock than usual from London and from Stourbridge fair; their goods fed the flames. Eleven lives were lost. The property destroyed was given in at £128000 odd money, besides the church, valued at £50000.[2]

The Earl of Northampton, who, as well as his father, had distinguished himself in the civil wars, was recorder, and took an active part in relieving the sufferers on the spot. And subsequently, at Westminster, on the King coming to the House to prorogue Parliament, he prevailed upon His Majesty to wait awhile, till a Bill could be prepared to receive the Royal Assent for rebuilding the town. His Majesty, it is said, expressed on this occasion some surprise at his generous regard for a place which had offered great indignities to him, and to the earl his father.[3] A noble generosity was one of the few things which could surprise this Prince; who, however, was himself as ready to forget injuries as services. Charles gave the town 1000 tons of timber out of Whittlewood Forest, and remitted the chimney-money for seven years; which is duly commemorated on the tablet under his statue over the portico of

[2] The State of Northampton from the beginning of the Fire, *Sep.* 20, 1675, to November 5, by a Country Minister, also Bridges; vol. i., p. 432. Dr. Conant says the fire broke out September 23. See in the Life of Dr. Conant—a letter to his cousin on the fire.

[3] Bridges, vol. i., p. 440. "After a short combat near Stafford, between the Earl of Northampton and Sir John Gell, the former, who commanded the King's forces, was killed, while he fought with great valour; and his forces, discouraged by his death, though they had obtained the advantage in the action, retreated into the town of Stafford."—Hume, an. 1642. This was Spenser, Lord Compton, Earl of Northampton. His son James is referred to in the text. The title of Northampton had become extinct in the families of St. Liz, Bohun, Parr, Howard. William, the second Baron Compton, was created Earl of Northampton in 1618. The

All Saints' Church. £25000 were collected by briefs and private charity. The judges, the justices of the county, the mayor of Northampton, and eleven others, were made a Court of Record, to decide cases of dispute, and to make rules in respect of form, party-walls, and buildings. The houses were to be covered with lead, slate, or tile. A person not free, building a house worth £300, was to have his freedom; places not built on in three years, were to be disposed of—a reminiscence of the Act of Henry VIII.[1] With the exception of floods, and two shocks of earthquakes, on September 30, 1750, and October 28, 1776, the Chronicles of Northampton have since had no natural phenomena, nor any political convulsions of importance to record.

A charter, granted 1663, placing the government in the hands of a mayor, bailiffs, ex-mayors, ex-bailiffs, and a common council, "the company of 48," was included in a pretty general forfeiture, and a new one was issued (1683), appointing only 40 burgesses, and reserving to the Crown the power of placing or displacing the members. This impracticable charter was declared void, and the former charter was in force till 1795.

In the beginning of the 18th century education made some progress in Northampton. John Dryden gave the famous George Inn for the endowment of the Blue Coat School in 1710; Mrs. Becket and Mrs. Sargeant founded a girls' school in 1738. The *Northampton Mercury* was established in 1720, and the publication has been continued ever since by the same family. One of the early numbers contained an advertisement announcing that the house of Sir Arthur Haselrigg was to be let, and "with it, if desired, the Castle of Northampton, and two large orchards planted with young fruit-trees, and very good and convenient pasture-ground for horses and cows, useful to a family; and also a very commodious kennel for a pack of hounds, situate in the said castle orchard."

As the learned nonconformist ministers who first separated from the Church advanced in years, or died, the Dissenters began to feel the want of institutions for the education of their pastors. Dr. Watts was consulted; and an academy which had been commenced by Mr. Jennings at Kibworth, in Leicestershire, was re-organized on a comprehensive and scientific basis, by Dr. Doddridge, and established at Harborough, in the house of Mrs. Jennings, whose daughter married Dr. Aikin, and was the mother of Mrs. Barbauld. Dr. Doddridge had "a call" from the *Castle-hill* congregation, which was "very numerous;"[2] and went with his academy to Northampton in 1729, where it remained till his death, when it was removed in 1752 by the trustees, and placed under Dr. Ashworth at Daventry.[3] Such a man as Doddridge could not be 22 years at the head of an academy, and educate 200 "young men" in a small town without giving some impulse to the intellect and benevolence of the members of the Church, as well as to the Dissenters. Among the results of this and of the other movements in the town the most important for our purpose are the accounts kept since 1735, in the parish of All Saints, "containing the greater part of the town, of the ages at which all have died there; and since 1741, of the number of males and females that have been christened and buried, *Dissenters included*, in the whole town." A census was taken as early as 1746.

"In 1746, an account," says Dr. Price, "was taken of the number of houses,

present noble marquis is the tenth of the family which has enjoyed the dignity of earl or marquis in eight generations, through 229 years.

[1] 22 Ch. II., 1675.

[2] Diary and Correspondence of Dr. Doddridge, vol. ii., p. 510.

[3] The academy was afterwards removed to Northampton and to Wymondley in Hertfordshire. It is now near University College, London. I am indebted for a part of the information to Mr. Baker, the author of the County History, who has sacrificed his health and fortune on that work.

and of inhabitants in the town. The number of houses was found to be 1083; and the number of inhabitants 5136. In the parishes of All Saints and St. Giles, the number of male and female heads of families, servants, lodgers, and children, were particularly distinguished. The heads of families were, 707 males; and 846 females. Children, males 624; females 759. Servants, males 203; females 280. Lodgers, males 137; females 287. In St. Peter, males 99; females 129. In St. Sepulchre, adults 638; children 427. In the last parish the sexes were not distinguished."

"The christenings and burials in the whole town for 40 years, from 1741 to 1780, have been as follows:—

Christened { Males 3218 / Females 3108 } 6326. Annual medium 158.

Buried . { Males 3757 / Females 3823 } 7580. Annual medium 189½.

"In the parish of All Saints, from 1735 to 1780, or 46 years:—

Christened { Males 2152 / Females 2068 } 4220. Annual medium 91¾.

Buried . { Males 2377 / Females 2312 } 4689. Annual medium 102.

The census of 1746 may be put more conveniently in a tabular form:—

——	Males.	Females.	Males and Females.
Heads of families	707	846	1553
Children	624	759	1383
Servants	203	280	483
Lodgers	137	287	424
All Saints and St. Giles . . .	1671	2172	3843
St. Peter	99	129	228
St. Sepulchre	463?	602?	1065
St. Peter and St. Sepulchre. .	562	731	1293
Northampton	2233?	2903?	5136

The Bills are presented annually to the mayor, and the rest of "the worthy inhabitants of the town of Northampton," by the parish clerk of All Saints. The Bill closes with an admonitory piece of poetry addressed to the inhabitants who have not quitted "the Nen's barge-laden wave."[1]—(See a specimen of the Bill, page 328.)

A general infirmary was founded in 1747. It was first opened with 40 beds for in-patients in George Row. In 1750 it was enlarged so as to ac-

[1] Cowper, who resided at Weston, was the author of the stanzas for the years 1787–93, "composed for John Cox, parish clerk of Northampton." He gives a graphic description of his first interview with Mr. Cox:—"On Monday last, Sam brought me word that there was a man in the kitchen who desired to speak to me. I ordered him in. A plain, decent, elderly figure made its appearance, and, being desired to sit, spoke as follows: 'Sir, I am clerk of the parish of All Saints, in Northampton, brother of Mr. C., the upholsterer. It is customary for the person in my office to annex to a bill of mortality, which he publishes at Christmas, a copy of verses. You will do me a great favour, sir, if you would furnish me with one.' To this I replied, 'Mr. C., you have several men of genius in your town, why have you not applied to

commodate 60 in-patients. In 1784 the in-patients were increased to 70. In 1789, lands, formerly part of the property of the St. Andrew's priory, were purchased for £1000; and a new hospital, which cost £11833, was opened in 1793 for the admission of patients. In 1803 vaccination was introduced. A library of 3000 volumes, a museum, and convalescent ward, are attached to the infirmary.

The town "ever laboured under a scarcity of water;" this was felt sensibly at the fire. An attempt was made to supply it with water in 1722 from a place half-a-mile distant. After the expenditure of "some thousand pounds, by William Wykes, Esq., one of our late candidates," says the *Northampton Mercury*, "this was happily effected by the force of an engine." The works were abandoned in 1753. An engine and two reservoirs were constructed in 1837; whence the water readily reaches every part of the town. The navigation of the Nene was extended to Peterborough, under an Act of 12 Anne, and another in 1725; to Oundle, Thrapstone, Higham Ferrers, Wellingborough, in 1726; and to Northampton in 1762; and in 1815, the river received an accession of traffic by a branch of the Grand Junction Canal from Blisworth.

In a sunken ground called Potter's Field, close to the Grey Friars, a kiln was recently found, with fragments of a yellow and a red pottery, and some covered with a green glaze.[1] According to tradition, the Londoners formerly sent their cloths to the Scarlet Well, to be dyed scarlet, "wherein this spring excelled all others in the kingdom: upon the discovery of the scarlet grain [cochineal] it became neglected."[2] The men of Northampton, in the reign of John, paid £10 that they might be able to buy and sell dyed cloth as they had been accustomed to do in the time of King Henry. A cotton mill was attempted at an early date, but did not succeed. Stockings were formerly made here; and it is stated that Alsop, from this county, introduced the stocking-frame into Leicester in 1680. Lace-making was carried on at an early period, but has latterly been deprived of due remuneration by rivals who have had the command of machinery. Fuller says that it was famous in his day for saltpetre and pigeons. In one of the most useful arts to which machinery has never yet been applied, Northampton now stands, and has long stood, unrivalled. As, for reasons which cannot be readily explained, Worcester manufactures gloves, Leicester stockings, Nottingham lace, Coventry ribbons, Kidderminster carpets, Sheffield knives—shoes are the staple of this town. It is an old saying, that "you may know

some of them? There is a namesake of yours in particular, Cox, the statuary, who, everybody knows, is a first-rate maker of verses; he, surely, of all the world, is the man for your purposes.' To which the clerk replied, 'Alas! Sir, I have heretofore borrowed help from him, but he is a gentleman of so much reading, that the people of our town cannot understand him!'"

"I confess to you, my dear, I felt all the force of the compliment implied in this speech, and was almost ready to answer, 'Perhaps, my good friend, they may find me unintelligible too, for the same reason.' But, on asking him whether he had walked over to Weston on purpose to implore the assistance of my muse, and on his replying in the affirmative, I felt my mortified vanity a little consoled, and, pitying the poor man's distress, which appeared to be considerable, promised to supply him. The waggon has accordingly gone this day to Northampton, loaded in part with my effusions in the mortuary style. A fig for poets who write epitaphs upon individuals! I have written *one*, that serves *two hundred* persons."—Letter to Lady Hesketh, Nov. 27, 1787, in Cowper's Works, ed. by Grimshawe, vol. iii., p. 271.

[1] Wetton's Guide, pp. 48, 84, 41.

[2] Morton, Hist. of North. So early as the eleventh and twelfth centuries the *English scarlet* cloth is mentioned. The Emperor Henry III., about the year 1050, conferred Nimeguen upon the Count of Cleves on condition of his delivering to him yearly three pieces of English scarlet cloth—*tres pannos scarlitinos Anglicanos.* Another passage is quoted by Beckman: pannos scarlacos bene rubeos Anglicenses ardentis coloris.—Hist. of Inventions, Art. Kermes. Mag. Rot. Pip. 4 John, Rot. ii. 6.—Hartshorne.

when you are within a mile of Northampton by the noise of the lap-stones." So early as the reign of Edward VI., regulations were made which show that the shoe trade was an important branch of the business of the town.[1] The army, the colonies, London, and the principal markets, are now supplied with shoes from Northampton. Immense contracts have been made, and the demand during the war was perhaps the first cause of the rapid progress of the population. In 1831, 1322 males, aged 20 and upwards, were returned as boot and shoemakers; in 1841, the numbers had increased to 1821; at the same time there were 442 males under 20, and 346 females classed under the same trade in a population of 10655 males and 10587 females. The males aged 20 and upwards were 5756, so that nearly 1 in 3 of the men in the town is a shoemaker. "The town is well built and clean," say the Municipal Boundaries Commissioners; "with the exception, however, of a few of the principal streets, the houses present a uniform appearance, and are almost entirely occupied by journeymen shoemakers, and the other workmen employed in the trade." The proportion of shoemakers in the county is 5237 in 52369, or 1 in 10; the proportion in all England is 144601 in 3897336, or 1 in 27 males of the age of 20 and upwards. In the town of Stafford 899 in 2704, or 1 in 3 men are shoemakers; in Carlisle only 205 in 5784 are shoemakers; in Bedford 212 in 2272 at the same ages.

There were three iron foundries in Northampton;[2] and 99 males above the age of 20 were returned as iron-founders or moulders in 1831, and 67 in 1841.

It would be wrong to look upon the town as a mere place for the manufacture of shoes. It is the centre of a flourishing agricultural county. It is the mart at which the agricultural produce of Northamptonshire is exchanged for furniture, clothing, books, and articles of foreign commerce; the residence of surgeons, lawyers, and other professional men, whose sphere of action extends over a wide circle; the place of re-union for the gentry, freeholders, farmers; and the site of the county institutions. It is thus that the existence of the numbers following the various occupations returned at the census can be accounted for. In 1841 there were returned at the age of 20 and upwards in the town, 1 barrister, 24 attorneys, solicitors, and law-students, 4 physicians, 25 surgeons, 21 schoolmasters, 52 schoolmistresses and governesses, 23 booksellers, 83 grocers, 65 drapers, 180 tailors, 88 curriers, [1821 boot and shoemakers], 190 masons, statuaries, plasterers, paviours, bricklayers, 165 carpenters and joiners, 30 whitesmiths, 59 painters, plumbers, and glaziers, 60 blacksmiths, 85 innkeepers and beer-shop keepers, 14 of whom were women. Situated on the great north road, its inns were, at an early period, of considerable note. The Peacock had galleries round the open yard, into which the pack-saddle horses were driven, to be unloaded in security. The brewers in 1841 were 23, butchers 92, bakers 87, gardeners 121; 345 were returned labourers, 59 agricultural labourers, 183 male servants at the age of 20 and above, 109 under 20; 550 female servants of the age of 20 and upwards, 368 under 20; 133 men and 320 women were returned as persons of "independent" means; 160 persons, chiefly adults, slept there in barns and tents on the night when the census was taken (June 6–7), 236 in boats and barges. There were 163 lunatics in the asylum, 168 prisoners in gaols.

Northampton contains the four parish churches, All Saints, rebuilt in 1780, and the ancient structures of St. Giles, St. Peter, and St. Sepulchre. St. Katherine, with 1200 sittings, was erected by public subscription in 1838;

[1] Extracts from the Chamberlain's Book of Minutes. Historical Memorials, by Rev. C. A. Hartshorne, pp. 86–89.

[2] Report of Commissioners on Municipal Boundaries, p. ii.

St. Andrew, a church of the same size, in the same way, in 1841. A new church of St. Edmund is already endowed. The site of old St. Edmund is a cherry-orchard; that of St. Bartholomew was known as Lawless (for Lawrence's) churchyard; St. Margaret's church was in St. James's-end, in the parish of Duston; near the Inn of St. Mary's a few arches are hidden in a cellar of St. Mary-street. There is no trace of St. Martin's in the street of that name. St. Michael's gave its name to a lane which is now called Wood-street.

The following 14 Dissenting *chapels* are in the parish of *All Saints*:—The Old Baptist Chapel, College-street;[1] the Independent chapels in King-street and Commercial-street; Particular Baptist, Kingswell-street; Wesleyan, Gold-street; Primitive Methodist, Horsemarket; Wesleyan Association, King-street; Unitarian, King-street. In *St. Sepulchre's parish*, the new Wesleyan chapel, Todd's-lane; Mount Zion, Baptist chapel, Grey Friar-street; Roman Catholic chapel (new), Leicester-road. Near is a small Catholic seminary, and a community of nuns from Belgium has been lately introduced. In *St. Giles's parish*, Providence Chapel (Calvinist), St. Giles's-street; the Friends' Meeting-house, Wellington-street. In *St. Peter's parish* is the Old Independent Chapel at which Dr. Doddridge ministered.[2]

Besides the Free Grammar School, recently restored, and the Girls' School, the All Saints' Parochial School, in connexion with the National Society, will hold 600 children. The British Schools were built in 1845. A Mechanics' Institute, established in 1832, is flourishing; it has 7500 volumes, a lecture-room, and a museum. The General Library was established in 1800. Wetton's Library and News-room is opposite the Post-office. A building for a Temperance-hall and public rooms has been recently built in Newland. An Agricultural Book Society was recently established: a Protection Society was commenced in the year 1844; also an Architectural Society. There are 20 religious societies. Two newspapers are published at Northampton; the *Mercury* since 1720, the *Herald* since 1831. Freemasons, Odd Fellows, Foresters, and Free Brothers have *lodges* in the town. There is also a Poor Allotment and an Artizan Society. A Benevolent Loan Fund was established in 1840, and has been found a most valuable institution, especially in seasons of sickness or depression of trade; since its commencement, £15000 have been lent to 4000 persons, in sums varying from £1 to £15, and the total loss up to 1847 has been less than £5. St. John's Hospital is (or ought to be) governed by a master and two co-brothers or chaplains, who are appointed by him. The master himself is appointed by the bishop, and has a house in the adjoining grounds: the house is allowed to go to ruin, the master not being resident. Eight poor people, appointed by the master, were maintained here, with lodging and firing in the common hall, and an allowance of 1*s.* 11*d.* weekly. At the survey in 1535, the revenues, clear of all deductions of salaries, &c., were valued at £37 19*s.* 6*d.* The rents are stated to be very productive, but unfortunately the recipients of the charity feel but little benefit from that source. The charity is now said to be in Chancery. The Bishop of Lincoln being visitor, the Charity Commissioners had no power over it when they held their visitation in the town.[3] St. Thomas's Hospital, founded in 1450, has apartments for 20 poor women, who are allowed a weekly stipend of 4*s.*, and

[1] Dr. Ryland was the pastor for 30 years in the 18th century.
[2] Letter from Mr. W. Cornfield, registrar.
[3] Editor of Wetton's Guide.

£1·375 annually; 50 out-pensioners have each £8 yearly; one who has been a householder has £60 a-year in the hospital. The income is £858, the charges £723: the surplus is accumulating (1834) to provide a more comfortable and healthy dwelling.[1] For benevolent purposes there is, besides the General Infirmary, the Royal Victoria Dispensary, opened in 1845; it has 1800 members, and is conducted on the provident principle. The members are entitled to attendance by a medical officer, if necessary, at their own homes. The members pay 1*d.* a-week, or 2*d.* a-week for a man, wife, and all children under 14. About £1300 were raised for the buildings, &c.; and subscriptions of £200 a-year are required for drugs and other matters. The remuneration appears to be inadequate. There are Public Baths in the same building. The *Lunatic Asylum* and 24 acres of land cost £35000, raised by legacies and donations; it was opened in 1838, and will hold 240 inmates. Its income is drawn from the contributions of the inmates. The Union Workhouse, erected in 1836, will contain 304 paupers. At the census it contained 136.

The average amount of money annually raised and expended for the relief of the poor in the 7 years, 1838–44, was £4168 within the borough: namely, £2214 in All Saints, £1954 in the other parishes; which is £·196 a head in the borough, £·280 a head in All Saints, £·146 in the other parishes. The rent of the houses of the borough was £68782: the rate on this house-rent was £·060, and somewhere about £·012, or less than 3*d.* in the pound, on the income of the inhabitants.

This table was supplied by Mr. Hodgkin, of the Poor Law Commission.

Before the year 1675 the Castle was used as a County Gaol; and here likewise were kept the two Courts of Justice.

For the purposes of justice and police there are now the *Town Hall*, in

[1] Commissioners of Inquiry into Municipal Corporations, Part 3, 1834.

which the business of the Borough Sessions and of the Small Debts' Court is transacted, and in which the Corporation hold their meetings: the *County Hall*, in the Palladium style, has courts in which the Assizes, Quarter Sessions, and County meetings are held. The County Gaol, rebuilt "on the model system," at an expense of £25000, is calculated to receive 150 prisoners. The prisoners under confinement June 6–7, were 127. The former gaol cost £16000 in 1794, and was on Howard's plan. The Town Gaol is on the separate system; it will hold 80 prisoners, and cost, in 1846, £12000, besides £5000 for the land. On the petition of the inhabitants in 1793, barracks were erected in 1796.

There are two banking establishments; the Northamptonshire Banking Company and the Union Bank. There is a savings' bank. Money orders are granted at the post-office, by which there are two deliveries of letters daily. The London road to Leicester and York, and the road from Daventry to Peterborough and Cambridge cross in the town, and have become the principal streets. There are two bridges. The canal to Blisworth connects the town with the Grand Junction. The London and North Western Railway passes to the west of the town; the branch to Peterborough and the Eastern Counties to the south. Wednesday is the market day for vegetables chiefly; Saturday is the market day for cattle, sheep, pigs; the corn market is also numerously attended in the Market Square. Fairs are held in every month, except July and October; cheese is sold in September; a fair for wool has been opened latterly in July.

The races in March, the cricket club, the winter county assemblies, the theatre, and the billiard rooms, are the principal public amusements.

The poplars of the *New Walk* made by the corporation in 1783 were cut down; the avenue, extended towards the river, is now called the Victoria Promenade, in commemoration of Her Majesty's visit; the ditch which defended the town on the south side was filled up and planted as far as Cow Lane. A general cemetery, extending over nine acres, and laid out with taste, was commenced in 1846. The town, by a local Act, is watched, lighted, and paved, under the management of commissioners. Gas is supplied by a company established in 1823; another company (1837) supplies the town with water. These with the dispensary, the medical relief under the Poor Law, and the hospitals, are all the sanatory arrangements of which we have any notice. Before the corporations were reformed throughout the kingdom, the control of these public arrangements, which appear to belong so naturally to the town councils and the Crown, was suffered to fall into the hands of commissioners, established by local Acts. The self-elected councils had, it appears, lost the confidence of the rate-payers, who would have viewed with suspicion any extension of their powers; on the other hand, men old in office, with fixed salaries, were perhaps not anxious to see their duties extended without any certain prospect of rewards equivalent to their own estimate of additional services.

The Report of the Commissioners of Inquiry into Municipal Corporations furnishes the following additional information respecting the borough:— Charters were granted by James I., Charles II., and George III. (1796). Under the last, the governing body was composed of the mayor, aldermen (17), the bailiffs and ex-bailiffs, and the 48 common councilmen, elected for life. When the corporation was visited, the officers of the corporation were, a recorder, a deputy-recorder, a town-clerk, two coroners, a chamberlain, a warden, a treasurer, a mace-bearer, four serjeants-at-mace, a town-crier, and a

hall-keeper. Till the passing of the charter in 1796, restrictions on trade existed in favour of the freemen of the borough; but, on the granting of that charter, the restraining enactments were omitted at the desire of the corporation.

The annual rental of the property of the corporation was £1449: namely, £1039 from lands and tenements; £120 from meadows depastured by freemen; £90 for stall-ground at the market; and £200 from the tolls of the town.[1] The assessed taxes for the year ending April 5th, 1831, were £4122. The number of houses rated at £10 and upwards in 1831, was 691; *worth* £10 and upwards, 1087. The right of voting, prior to the Reform Act, was in the inhabitant householders occupying a distinct dwelling-house six months previous to voting, and not having received alms for twelve months. The number of electors registered in 1832 was 2497.

A freeman has right of common over about 200 acres for six head of cattle or horses; fee 6*s*. for a horse, 5*s*. for a cow. Season of depasture from the time grass is fit till Old Candlemas.

The income of the corporation . .	£ 1449
The expenditure	1244
	£ 205

For costs incurred in a toll-case, the corporation owed £2000.

The following charges were brought against the corporation by the commissioner:—

(1.) The election of members of the corporation has been conducted on the strictest principle of political exclusion. The mayor has never known an instance in which a person opposed to the politics of the corporation had been elected into that body. Dissenters are very numerous in the town. Scarcely any of the master manufacturers engaged in the staple trade of the town are members of the Established Church; yet since the repeal of the Test and Corporation Acts, no Dissenter has been admitted into the common council. The excluded portion is the most numerous, and of equal wealth and intelligence with the corporation party.

(2.) The corporation have interfered largely in elections. In 1826 they voted £1000 from the corporate funds towards paying the expenses of a ministerial candidate. The costs of two law-suits in which the magistrates were involved, amounting to £350, were paid out of the corporation funds.

(3.) They have made the charities and patronage subservient to party purposes. Sir Thomas White's Charity, a fund of £15497, is directed to be lent out to young men of "good name, fame, and condition, in Northampton." A ninth part of it is lent out in sums of £100 every year. It furnishes more than 17 loans (18?) annually. No discrimination has been shown in the distribution of the loans. They have been granted to persons settled in trade; to men advanced in life; and sometimes to persons in opulent circumstances. In a recent instance, a loan was granted to an attorney in good practice, who was said to have a good establishment, and to keep his hunters.

[1] Tolls:—2*d*. on every loaded waggon or cart; 2*d*. on every beast; 1*d*. on every 20 sheep; 8*d*. every ram; 4*d*. every bull; 4*d*. every horse; every new set of wheels shod with iron, 4*d*.; not shod with iron, 2*d*. The tolls taken at market were £10 to £12.

The town under the Municipal Reform Act of 1835 was divided into three wards, and is governed by a mayor, six aldermen, and eighteen councillors, a third of whom go out of office annually. The corporations of the nineteenth like the monasteries of the sixteenth century, had no doubt performed much good, as well as the evil brought to light by the Commissioners: let us hope that their vices will be remembered by the reformed councils only to be avoided, and the zeal of party spirit only to be surpassed in legitimate works of usefulness.

Spencer Perceval, whose portrait adorns the Town-hall and statue All Saints Church, was, in the reign of the old corporation, member for Northampton until he was assassinated in the lobby of the House of Commons. The Right Hon. R. Vernon Smith (since 1831) and Mr. Raikes Currie (since 1837), two "Liberals," are the present members; returned in 1847 by 840 and 898 votes out of 2057 registered electors. The politic institution of a burgess oligarchy by Morton and Henry VII., though it did not prevent Northampton from taking an active part in the parliamentary and revolutionary cause, yet in more auspicious times effected for a long time the purposes for which it was projected.

Progress of the Population of Northampton.

The censuses trace the slow growth of Northampton through more than seven centuries.

Year 1084. The houses are enumerated in the Doomsday Survey. The population is estimated by assuming five inhabitants to every inhabited house. Some of the inhabitants had probably been carried off by the Northumbrians in 1065 (*vide* ante p. 295), and others had been driven away by the seizure of property after the Conquest, of which Doomsday furnishes such ample evidence. A few inmates of religious houses should perhaps be added to this estimate. The existence, in 1108, of one church to every 30 houses and 148 inhabitants, is no proof of the inaccuracy of the Doomsday census. Churches were no doubt small, and were frequented by the whole of the inhabitants. In London and all the Saxon towns the churches—with religious houses, the only public institutions of the age—were numerous. The church-rate, poor-rate, and tithe were collected under one head, as tithe. The priest had to keep a school, minister to the poor, provide for the stranger and wayfarer in a building near the church, keep standard weights and measures, and measure

field labour.[1] The priesthood (clerus) included the whole learned class; the church was a church, school, almshouse, inn, library, benevolent and scientific institution, all in one. The churchyard, we have seen, was once the market-place and the polling booth. The town churches, within the walls for security, were also no doubt used by the people of the surrounding country.

1675. 600 houses, out-houses, &c., containing 700 families, were burnt down in this year (*vide* ante, p. 304). The Rebuilding Act says "*the greater part*" of the town was burnt; Brydges repeats this with the variation, Northampton was "almost consumed." Both are sufficiently vague. Calculated on the rate at which inhabited houses increased from 1746 to 1801, the houses in 1675 must have been about 800, of which 763 were inhabited. It is difficult to suppose them more, if 600 houses and out-houses made the "greatest part of the town."

1746. The 1083 "houses" returned probably included "uninhabited houses," which, for the sake of comparison, it has been assumed were 43. The proportion of males and females in St. Sepulchre, stated to contain 1065 inhabitants, was estimated from the 1770 males and 2301 females returned in the other parishes.

1801, 1811, 1821, 1831, 1841. The censuses do not include military.

If the population had increased uniformly in arithmetical progression, the seventh column shows that the numbers added to the town were 55 every 10 years for 662 years (1084–1746), 343 every 10 years for 55 years (1746–1801), and so on. The population did not quite quadruple in the first 662 years (1084–1746); in the next 75 years (1746–1821) it doubled; it nearly doubled again in the 20 years 1821–41. If the population increased uniformly in geometrical progression during each period, the rate of increase, deduced from the houses, was 0·191 per cent. annually (1084–1746), and 0·426 annually (1746–1801); and, deduced from the population, 2·81 annually from 1801 to 1841. At the three dates the population would double in 364, in 159, and in 25 years.[2] The females were much more numerous than the males in the earlier censuses of 1746, 1801, 1811; in 1841 the males slightly exceeded the females, to be ascribed probably to the rapid progress of the staple trade. Shoemakers increased from 1831 to 1841 more rapidly than the general population in England, and much more rapidly than the population of Northampton.

Annexed is a detailed return of the population of the four parishes at the last five censuses:—

---

[1] Thorpe, Ancient Laws and Institutes, vol. i., p. 342; Lingard, Hist. Anglo-Saxon Church, pp. 189, 119.

[2] Let $r = 1 +$ annual rate of increase, then the logarithms of r for the three periods are—

Inhabited Houses,

1084–1746 $\lambda r = \cdot 0008266$
1746–1801 $\lambda r = \cdot 0018451$

Population,

1746–1801 $\lambda r = \cdot 0024675$
1801–1841 $\lambda r = \cdot 0120215$

The period of doubling (x) is deduced from the formula—

$$x = \frac{\lambda 2}{\lambda r}, \text{ or } \lambda x = \lambda(\lambda 2) - \lambda(\lambda r).$$

[1] The Priory of St. Andrew, extra-parochial, consists of lands formerly belonging to the Priory of St. Andrew, a great portion of which has been formed into streets, which adjoin the parishes of St. Giles, St. Sepulchre, and Kingsthorpe. The return includes the General Infirmary and the General Lunatic Asylum, containing respectively 120 and 157 persons.

The mortality at all ages in Northampton was about 3·388 per cent., or 1 in 29·5, at all ages, in the 40 years 1741–80, and much higher among males than females.

The annual value of real property in Northampton increased more rapidly than the population. The rent of the houses not held by the king, the farm of the town, (including, among many other royal perquisites, the rent of the burgesses,) and the profits of the borough appropriated to Judith may be fairly set down as much more than the annual value of the lands and houses. In the coin of the present day it did not exceed £140 of revenue, which would then purchase about 140 quarters of wheat, for it is probable, from the few prices of wheat quoted by historians, that silver equal in weight to £1 of our coin would purchase a quarter of wheat.[1]

	Nominal Rent.				Value in Coin of the present day.
	£.	s.	d.		£.
Rent of 230½ houses.	10	11	8	× 2·9 =	30·691
Farm of Town, with Rent of 86 houses. . .	30	10	0	× 2·9 =	88·450
Payment to Judith	7	0	0	× 2·9 =	20·300
Profits, &c.	48	1	8	× 2·9 =	139·441

The annual value of the real property assessed under the income tax in 1815 was £21731, which was equivalent to 4515 quarters of wheat at £4·813 a quarter—the price ruling from 1811 to 1815.

The annual value of the real property in *houses* and *lands* only assessed under the income tax for the year ending 5 April 1843, was £74416; which was equivalent in value to 23046 quarters of wheat at £3·233 a quarter, the average price in the 5 years 1838–42.

In Canterbury, a city from immemorial time and the centre of the English church, *eight* acres of meadow land (*prati*) at the Doomsday Survey yielded 15*s.* rent, 1000 acres of unproductive woodland (*sylva infructuosa*) 24*s.*; that is for the meadow 22½*d.* (in weight of silver 5*s.* 5*d.*) an acre; for the woodland a farthing and a fifth (£·0012) an acre. Such appears to have been the range of rents after the Conquest. A meadow near Northampton, called Estecroftes, yielded some years afterwards 16*s.* 4*d.* rent.[2] The commissioners in 29 Hen. VIII. (1536) let the land of St. Andrew's Priory at 8*d.* an acre,[3] equal in weight of silver to 11*d.* of the present day. Wheat fluctuating from

[1] See Fleetwood's Chronicon Preciosum.

[2] Dugdale's Monasticon, vol. v., Northampton—St. Andrew's Charters.

[3] Dugdale's Monasticon, Book of the Demaynes of St. Andrew.

6*s.* to 30*s.* was on an average about 10*s.* a quarter in the first half of the 16th century;[1] the rent of the land in wheat was $= \frac{3}{4}$ (or ·74) of an imperial bushel, = ·092 of an imperial quarter.

In 1834, Gobion's manor, a farm-house, homestead, and 3 allotments of 133 acres of land, was let by the corporation for £598 a year; which is £4·496, or nearly £4 10*s.* an acre. A field of 3A. 3R. 9P. let for £31 a year; £8·192, or nearly £8 an acre. The area of the town is stated by Mr. Rickman to be 1520 acres; assuming that the houses, with the streets and bits of ground, stand on 320 acres (this will be about 14 houses to an acre, while in the densest parts of London there are 24 houses to an acre) 1200 acres will remain as an approximation to the "lands" valued at £5634 under the income tax. $£\frac{5634}{1200} = £4{\cdot}695$ the rent per acre of the lands immediately round the buildings of the borough. Excluding the borough, the annual value of the 18346[2] remaining acres of land in the Northampton Union was £39999, or £2·180 an acre; the county, exclusive of the Union, containing 630374 acres, some of it woodland and waste, was valued at £927089, on an average £1·471 an acre. The rent of an acre of land rises from £1·471 to £2·180, £4·695, and £8·192, as from the surrounding county we approach the centre of the town. Looking at the third number, the rent of the town land rose from 11*d.* to 94*s.* an acre in the interval from 1536 to 1842. In the first period the rent was equivalent to three quarters of a bushel of wheat, in the latter period to 11·6 bushels imperial. The *produce* of an acre of land increased considerably, if it did not increase in an equal ratio.

The average rent of land in Northamptonshire has risen in the present century. It was £1·070 in 1810–11; £1·301 in 1814–15; £1·494 in 1842–43; nearly 21*s.*, 26*s.*, and 30*s.* an acre at the three periods. The price of wheat was £4·813 in the 5 years ending 1815, and £3·233 in the 5 years ending 1842; the rent in wheat at the average price was equivalent to 2·162 bushels in 1814, and 3·697 bushels in 1842.[3] The annual values of land in the income tax return include the rent of farm-houses and buildings.

The average annual value of a house in Northampton at the Doomsday Survey was, as has been seen, about 3*s.* The houses inhabited in 1841 were 4138, uninhabited 357; in October, 1842 (that is, in the middle of the year ending April 5, 1843), when the annual value of houses was £68782, the inhabited houses were probably about 4269. The rent was on an average £16 a house. This is nearly 6*s.* a-week. The house-rent per head was £3·139 a year; £·060 a week; £·0086 a day. An unusual proportion of houses (357) was uninhabited in 1841; if we divide 68782 by the total number of houses uninhabited as well as inhabited, it makes the rent £15·3 on an average. The nominal value in silver had increased more than 100 fold since the Conquest; it could scarcely have been less than 30 fold in wheat. How much the houses had improved in comfort and quality it is impossible to calculate. For an estimate 100 fold would scarcely be too much.

---

[1] Smith's Wealth of Nations, by M'Culloch, p. 117.

[2] The area of the Northampton Union is stated in the Thirteenth Annual Report of the Poor Law Commissioners (App. 172), to be 19866 acres. Moulton Park, of the annual value of £679, is not in the Union, it being extra-parochial. It is not included in the area of 19866 acres.

[3] M'Culloch says that the valuable return from which the facts for the two first periods were taken, was supplied by Mr. Wood, the Chairman of the Stamps and Taxes: Statistical Account of British Empire, vol. i., p. 531.

There is no return of the annual income of the whole population of Northampton. It can scarcely be less than 4 or 5 times the rents of the houses, 4 or 5 times £68782 = £275128, or £343910. In 1084, if the income of a family was 21*s.*, or 6 or 7 times the rent of the house, it would purchase little more than a quarter of wheat; in 1842, if the income was £64, or only 4 times the rent, it would purchase 20 quarters of wheat at the average price. In meat the disparity, though less, would still be great. In 1084 mutton, for instance, was perhaps not worth ½*d.* per lb., 21*s.* would purchase 504 lbs.: in 1842 at 6*d.* a pound £64 would purchase 256c lbs., or five times the quantity. The price of clothing and of all above the bare necessaries of life was high in 1084; and it is evident that the townspeople must have lived hardly on inferior meat, fruit, and grain.

No trace of this town is discovered in the early British history. The Romans have left no monuments—no name to mark Northampton; whether the place was planted by Saxon families, or seized by their warriors from the Britons when princes, Druids, bards, and people were driven to the west, is unknown, but it was a town long before history shows it to us as the camp of hostile Danish troopers. For two centuries it lived in the excitement, perils, and vicissitudes of war; it was burnt down by Sweyn; once a great part of its people was carried away captive. The Conqueror divided its lands and houses between himself and his followers; it was armed without by walls and a baronial castle, within by a Norman priory. From this period—when it had 1475 people in 330 houses worth perhaps £50 to £100 a year, and 1500 acres of land yielding the same rent—we have seen it increase to 21242 inhabitants, with 4495 houses worth £68000—land valued at £5600 a year; and the increase in people and wealth is chiefly the creation of a quiet, useful industry. Approachable at first through by-roads of difficult access—it is now connected by roads, canals, railroads, and English shipping with the extremities of the world. It furnishes Australia with shoes.

The life of man bears a certain proportion to its happiness. A miserable life is soon extinguished; violent lives end abruptly; the life of a good wise people approaches its natural term. In the last century the people here lived on an average about 30, now they live 37 years. In earlier times their life must have been shorter. Then the community had no skilful physician, no surgeon: an infirmary, a dispensary, a lunatic asylum, and from 20 to 30 educated medical men, are evidences that more care and skill are now devoted to the preservation of life. The poor were, many of them, slaves; their masters took some care of them: the clergy and monasteries had subsequently charge of the indigent. For one eighty-third part of their income the inhabitants have now some of the advantages of a Poor Law. Justice had its sword; it has now its judges, magistrates, bar, courts, and gaols. The skill of the workman in nearly all arts has increased, and embraces a greater variety of objects. Reading, writing, arithmetic, and other branches of knowledge have been more generally diffused by paper, printing, and schools. Science has made incalculable progress. The tenure of life and of property was insecure; at times it was only recognized by the strong for their own benefit. Property and liberty now uphold each other. At first the burgesses appear not to have had the *allocation* of the rents, tolls, and taxes at their own disposal: they gradually substituted the mayor for the sheriff, and gained political power, which was then thrown into the hands of a few, and is now more justly distributed among the artizans and householders. Northampton had

long no connection with the supreme government, except through its baron: two burgesses were summoned to meet Edward I. in parliament at Acton Burnel. The influence of towns was sensibly felt in the reign of Henry VII.; became paramount in the rebellion; and was settled on a wiser, less unequable basis by the Revolution and the Reform Bill. At the opening of its history, we find the disciple of Odin and the Saxon Christian in Northampton. The saints and the Saxons subjugated the war-gods; and Leland, on "Avon's" bridge, saw ten churches: numerous priests, interspersed with grey, white, and black friars, then crossed each other in the streets; the Reformation drove away the friars, the Reformers seized the land of the religious houses; the Protestant clergy and nobles were installed in the church livings; Brown set in motion the anti-hierarchic principle, which was allied to Puritanism, and triumphed for a moment with the Independents; now Independents, Baptists, Methodists, Unitarians, Catholics, and Quakers enjoy nearly equal rights with the members of the Established Church. We have little evidence, but who can doubt that the faith of the people is sounder; their conceptions of God worthier, holier, grander; their love to their neighbour warmer; their justice firmer; their conduct less the slave of low habits and criminal passions than at the time of the Conquest? In some instances foul superstition may only have been replaced by frantic fanaticism, outrage by vice; in others both have given way to wisdom and righteousness. The intellect and sentiment have been improved, the spiritual life of the people exalted. Yet there is immense room for improvement. Existence is cut short, health neglected, education imperfect.

Every one must be struck with the small place an English county-town has in history, compared with the city-states of Italy and Greece. Yet the population of Florence, Venice, Genoa, and once of Rome, of Sparta, Corinth, Athens, and Thebes, either did not equal, or scarcely exceeded, that of some English cities and counties. The History of England itself is, however, in truth the history of its towns and counties, of which the aggregate is the kingdom. Northampton took its part in the struggle between the Saxons and Danes; in the conflict between the Montforts and Henry; in the Wars of the Roses; it was the head-quarters of the parliamentary army; and had, doubtless, men at Naseby: it sent its quota of money and men to Crecy, Agincourt, Blenheim, Trafalgar, Waterloo; in peace and in war it shared with all others in the achievements and glory of the kingdom. The councils and the parliaments, the great political decisions and events, are dwelt on by the local historians; who have also recorded not only important acts but the mere presence of kings or great men, in such a way as to connect the local with the general life and history of the country. In this course we have followed them. The deeds of the day, the thoughts, the passions of the hour, attach themselves to localities, and live in everlasting remembrance. The home becomes the shrine of genius. The presence of a flourishing place that has records of eight centuries revives the past events of its history; the river, the streets, the sites of old churches, the country, involuntarily recall the crowd of great or royal characters that have passed that way: Sweyn, Harold, and Tosti; Henry I., Henry II., and Becket; Richard the Lion-hearted, John, and the great Barons; the Montforts, Prince Edward and his hundred Crusaders, the Black Prince, and Richard the Assassin; Henry VIII., Elizabeth, and Burleigh; Charles I., Fairfax, and Cromwell; and in the latter days, Victoria. Sweyn, with his predatory band, the first of the long procession of warriors, statesmen, and princes, burnt the town to the ground; Victoria,

the queen of a mighty empire "on which the sun never sets," gave her name to a dispensary for the relief of the sick and suffering. The two acts, the two persons—the relentless chief and the beneficent princess—characterize the epochs.

All Saints, Northampton.

Dr. Price's Table is derived exclusively from the deaths in All Saints' Parish; it may, therefore, be more correctly described as the All Saints' Table than as the Northampton Table of Mortality. I shall, however, with this explanation, retain the name used by Dr. Price, and now notice a few circumstances respecting All Saints' Parish, on which the New, like the Old Table, is, for the sake of comparison, constructed. "The parishes of All Saints and St. Giles," say the Commissioners on Town Boundaries and Wards, "contain the principal portion of the respectable classes of society. St. Peter is a small parish, containing principally the inferior tradespeople and working classes. St. Sepulchre is an extensive parish, but chiefly occupied by inferior tradespeople and the labouring classes. In All Saints about 35 per cent. of the houses are worth £10 a-year and upwards; in the other parishes less than 22 per cent. had the same value."[1] The parishes of St. Giles and St. Sepulchre contain much unenclosed space; St. Peter and All Saints are more densely peopled. The area of the borough is given by Mr. Rickman as 1520 acres, nearly 2½ square miles, on which in 1841 there were 21242 inhabitants. All Saints increased more rapidly than the rest of the borough from 1801 to 1811, and it had probably done so for many years, as the population of St. Giles and All Saints together increased from 3843 to 5349 in the 55 years 1746–1801, which was at the rate of 0·603 per cent. annually,[2] while the population of the whole borough increased at the rate of 0·570 per cent. annually. In the 10 years 1831–41, the growth of All Saints was arrested; the increase of 565 was less than the excess of the births (1953) over the deaths (1230) registered in the 7 years 1838–44. The building-ground becoming covered in old parishes, no further increase of their population can well take place.

The burials in All Saints' parish during the 46 years 1735–1780 were 4689, or 101·93 annually on an average. The population of All Saints was 4013, of St. Giles 1336, in 1801; the population of both parishes together was 3843 in 1746; deducing the population of All Saints in the middle of the 46 years, namely 1758, from the rate of increase in the two parishes, the mortality of All Saints is found to be 3·289 per cent., or 1 in 30·4, a little less than the mortality of the rest of the town. This is probably not far from the truth.

The Registration District of Northampton comprises the Borough and the surrounding country parishes. The three sub-districts comprise 17 parishes and 2 extra-parochial places:—

(1.) *St. Giles.*—Great Billing, Little Billing, Weston Favell, Moulton-Park (extra-par.), Abington, St. Giles, Priory of St. Andrew, or town part (extra-par.), St. Sepulchre.

(2.) *All Saints.*—All Saints, St. Peter, Kingsthorpe, Dallington, Duston.

(3.) *Bugbrooke.*—Upton, Harpole, Kislingbury, Bugbrooke, Nether Heyford, Upper Heyford.

The following Table (*a*) presents a comparative view of the mortality,

[1] Vide Report on Boundaries, under Northampton.

[2] All Saints and St. Giles, $\lambda r = \cdot 0026109$; Borough, $\lambda r = \cdot 0024675$.

deduced from the population at each age, 1841, and the deaths during the seven years 1838–44 in All Saints' Parish; in the Northampton districts; in Northamptonshire; in the Midland Counties, among which it is included; in England and in London. It will be observed that the mortality of All Saints under 25 agrees pretty closely with that of London; afterwards the mortality of London is considerably higher. Under 10 and above 45, the mortality is higher than the mortality of the kingdom generally. Under 10 and above 35, the mortality is much higher than in the county of Northampton.

The District of Northampton includes the large Lunatic Asylum and the County Hospital; the deaths in which raise the mortality in the middle periods of life. The data from which all these tables are derived appear with the Mortality Tables of all the districts of the Kingdom. The Tables are corrected for the ages of the living and dying unspecified; and the population is raised from what it was on June 6–7 to what, at the rate of increase in 1831–41, it would be in the middle of 1841.

(*a*).—Mean Annual Mortality per cent. of the Population in All Saints, Northampton, compared with the Mean Mortality of Males and Females in the districts of Northamptonshire, the South Midland Division, England and London. Deduced from the returns of Population, 1841, and the Deaths registered in the 7 years 1838–44.

All Ages	2·298 / 1 in 43·5	2·107 / 1 in 47·5	2·091 / 1 in 47·8	2·189 / 1 in 45·7	2·522 / 1 in 39·7

The counties in the South Midland Division are, Middlesex (extra-metropolitan part of), Hertfordshire, Buckinghamshire, Oxfordshire, Northamptonshire, Huntingdonshire, Bedfordshire, Cambridgeshire.

The Table is read thus:—Out of 100 persons under 5 years of age in All Saints' parish, 8·940 died annually; out of 100 (50 males and 50 females) in Northamptonshire under 5 years of age, 5·983 died annually, &c. &c.

The *sub-district* of All Saints comprises the two parishes of All Saints and St. Peter in the town, and the three parishes Dallington, Duston, and Kingsthorpe, of 5080 acres, in the country. To a population of 7898 in All Saints, 1230 died in seven years; in the same time only 538[1] died to a population of

[1] The population and deaths in the Workhouse, Infirmary, and Lunatic Asylum, of persons belonging to these parishes, are included in Table (*a*), but excluded from the following Table (*b*). Nor is there in Table (*b*) any correction for increase of population. This will not, however, affect the comparative results.

3702 in the country, including the town parish of St. Peter, which is probably as insalubrious as All Saints. The defect of proper sanatory arrangements in the parish is measured by the excess of deaths in the Table (*b*).

(*b*).

Age.	Sub-district of All Saints.[1]				Annual Mortality per Cent.		Excess of the Mortality in All Saints.
	All Saints' Parish.		Parishes of St. Peter, Dallington, Duston, Kingsthorpe.		[1]All Saints.	St. Peter, &c.	
	Population, 1841.	Deaths, 7 Years, 1838–44.	Population, 1841.	Deaths, 1838–44.			
0— 5	937	592	554	248	9·026	6·395	2·631
5—10	832	63	474	25	1·082	·753	·329
10—20	1692	61	754	25	·515	·474	·041

40—60	1245	140	593	51	1·606	1·229	·377
60—80	411	180	240	99	6·257	5·893	·364
80 and upwards	24	33	24	29	19·643	17·262	2·381
Not stated	66	1	..	..	..	..	..
Total .	7898	1230	3702	538	2·242 / 1 in 45	2·076 / 1 in 48	·166

The proportion of shoemakers in All Saints is less than in the borough; their total number in 1841 was 601, of whom 488 were of the age of 20 and upwards. The mortality at the several ages in the seven years 1838–44 was as follows:—

Ages.	Shoemakers in All Saints enumerated in 1841.	Deaths of Shoemakers in 7 Years, 1838–44.	Annual Mortality per Cent. of Shoemakers in All Saints.	All Saints' Parish.	Country Parishes of the Subdistrict.
10—20	112	7	·893	·515	·474
20—40	304	25	1·175	·849	·820
40—60	141	13	1·317	1·606	1·229
60—80	42	18	6·122	6·257	5·893

At the age of 20–60, the shoemakers constitute about one-ninth part of the whole *population*, which, however, includes their wives and families. The mortality among shoemakers up to the age of 40 is considerably higher than in the rest of the parish at corresponding ages. Of 69 deaths, 31 were by consumption, 8 by heart disease, to both of which maladies these useful artizans appear to be particularly liable.

Excess of Births over Deaths in All Saints.

In the seven years 1838–44, while there were 1230 deaths, there were 1953 births registered; hence there were 176 deaths and 279 births registered annually, or an excess of 103 births annually on a mean population of 7898. The births are 3·5 per cent. of the population, the deaths 2·2 per cent., the excess 1·3 per cent. annually.

[1] *Vide* Note, p. 321.

Immigration and Emigration.

There is a constant influx into and efflux from towns; the excess of the former over the latter is an addition to the fixed population of the place. A part of the fixed population is maintained by births and a part by immigration. The last census distinguished the persons "born in the county:" this heading is unsatisfactory, for in such a case as the present it leaves in the dark the important immigration from the rest of the county of Northampton into the borough of Northampton. If the persons "born in the parish" of All Saints had been distinguished, it would also have left in the dark a great part of the movement of migration, which can only be correctly traced by a registration like that of births and deaths. The following Table is, however, highly interesting; it has been framed from the Census Schedules, and shows the number of males and females, at each quinquennial period, "born out of the county," and consequently out of the parish of All Saints. Immigrants enter in considerable numbers under 5 years of age (children with their parents); they still continue flowing in slowly from 5 to 15; but the greatest influx takes place at the age of 15–25; few enter between 25 and 35, after which age a considerable number of the immigrants appear to leave the town, for it is only thus, or by a sudden immigration at 15–25, that the numbers at the age 25–35, namely, 513, can be reduced, or appear to be reduced, to 325 in the next 10 years 35–45.

Persons enumerated in All Saints' Parish, Northampton; exclusive of 142 Persons in the County Gaol, and of 66 Persons whose ages were not stated.

Age.	Total Persons in All Saints.	Born in the County.	Born out of the County.			Age.

All Ages	7690	5708	1982	1089	893	All Ages.

The Table does not show the true proportion of the inhabitants supplied by immigration; for a considerable part of the population, such as female servants, is recruited from the surrounding villages, and the rest of the county. Hence, from the age of 15 to 35, the number of females is less than the number of males "born out of the county." The number of female immigrants is understated to a greater extent than the number of males.

Upon the other hand, many persons born in All Saints' parish emigrate, and die in other parts.

Age.	Persons enumerated.	Born in the County.	Born out of the County.			Age.
			Persons.	Males.	Females.	
5—	1620	1394	226	118	108	5
15—	1775	1310	465	287	178	15
25—	1277	764	513	289	224	25
35—	904	579	325	170	155	35
45—	588	397	191	99	92	45
55—	335	225	110	58	52	55
65—	191	131	60	26	34	65
75—	59	42	17	8	9	75
85—	5	3	2	0	2	85

The Table is read thus:—Of 1277 persons, aged 25 and under 35, in All Saints, 764 were born in the county, 513 born out of the county, &c.

We can now explain, to a certain extent, the errors of Dr. Price's Table:—

(1) The mortality of All Saints was about 1 in 30·4 from 1735 to 1780; it is now 1 in 43·5. A considerable part of this difference *may be* the result of different proportions in the numbers living at the several periods of life; but it is almost certain that the mortality of the population, and particularly of children, was higher in the last century than it is in the present day. In all the calculations hitherto made, the *lifetime* lies between the *mean age at death* and the *number living out of which one* dies annually. Two-thirds of the difference *plus* the mean age at death = lifetime nearly. As 1 in 30·4 of the population died annually, and the mean age at death was 28·8 years, it is exceedingly probable that in 1735–80 the *lifetime* in All Saints was 30 years, which is between 7 and 8 years less than the lifetime in the present day.

(2) Dr. Price assumed that the population had been for a long time stationary, probably because the burials in his time slightly exceeded the christenings. In the whole town the burials exceed the christenings, but fall far short of the births *of the present day*. In All Saints the *christenings* at the church and at Dissenting chapels returned in the Bills, 1841–4, were 689, but the *births registered* were 1082. This is explained by the number of *Baptists* who entirely repudiate infant baptism, and of Dissenters, who do not use it; by the indifference of the poor, by the fees of the church, and by the Baptist opinions floating about. Mr. Cornfield, and the Minister of the Baptist Chapel, who did me the favour to consult the register, state that the members of the Baptist church were very numerous when Dr. Price's returns were made. Dr. Price's opinions on the question of the "decline of the population" probably prevented him from taking this into account, or from procuring the more accurate information with which his Dissenting friends could have furnished him. If the *births* had borne the same proportion to the *baptisms*

as at present, there would have been in All Saints 144 annual births to 102 deaths during the years 1735–80.[1]

(3) Dr. Price assumed that the town population was kept up by immigration, and that all the immigrants entered at the age of 20. In all his long speculations on the effect of immigration into towns on the mean age at death, he left out of sight one important element: he assumed the annual immigrants to be a constant number, while it is probable that they increased more rapidly than the births, but for the same reason—a local increase in the demand for labour, and the means of living. Assuming the law of mortality to be invariable, and to be the same in the advenæ as in indigenous inhabitants, the following propositions may be laid down:—

(*a*.) If the births are more than the deaths in a town, and increase gradually for many years, the number of young persons will be in excess; the mean age of those who die will be less than the *lifetime*, or what is incorrectly called the expectation of life at birth.

(*b*.) If immigrants enter at all ages, and in the *same proportions*, at each age respectively, as the resident population, they do not alter the mean age of the living or the dying.

(*c*.) If immigrants enter the town (*a*) in larger proportions as age advances, they may compensate for the excess of births, and the excess of those living at the earlier ages. The result may be a complete correction of the error caused by the increase of births; the population at the several ages be in the normal proportions of a life-table, the mean age at death be the lifetime.

(*d*.) As the immigrants into growing towns enter in greatest numbers at the age fixed on by Dr. Price, the general result is a partial correction of the nature noticed in (*c*). There is a compensation by older immigrants for the excess of young persons produced by the increasing births; the mean age at death is higher than it would otherwise be, and approaches nearer the *lifetime* than it would if there were no immigration. Dr. Price's "correction" had merely the effect of neutralizing this natural correction; it increased the error, or extended it from the age of 20 down to the beginning of life. The *lifetime* deduced directly from the facts was 28·83 years; the true lifetime probably 30 years; Dr. Price made it 25·18 years, which agrees with the mean age at death in the present century, when births and immigration have increased much more rapidly than in any period before Dr. Price wrote. Dr. Price had not the data for constructing a true Northampton Table. For this reason he failed.

It is certain that the tables in this paper contain the *data* for framing a correct life-table for All Saints, Northampton; it is equally certain that Dr. Price's Table is erroneous to an enormous extent. Whether the explanation of its errors be admitted or not is of less consequence.

* 15 christenings and 5 interments at St. Katherine's are included in the totals of All Saints.

Is it not sweet to think, hereafter,
When the Spirit leaves this sphere,
Love with deathless wing shall waft her
To those she long hath mourned for here?

Hearts from which 't was death to sever,
Eyes this world can ne'er restore,
There as warm, as bright as ever,
Shall meet us and be lost no more?

When wearily we wander, asking
Of earth and heaven where are they
Beneath whose smile we once lay basking
Blest, and thinking bliss would stay?

Hope still lifts her radiant finger
Pointing to the Eternal Home,
Upon whose portal yet they linger,
Looking back for us to come.

Alas! alas!—doth Hope deceive us?
Shall Friendship,—Love,—shall all those ties
That bind a moment and then leave us,
Be found again where nothing dies?

Oh! if no other boon were given
To keep our hearts from wrong or stain,
Who would not try to win a Heaven,
Where all we love shall live again?

THOMAS MOORE.

SONNET.

Methought I saw the footsteps of a throne,
Which mists and vapours from mine eyes did shroud—
Nor view of who might sit thereon allowed;
But all the steps and ground about were strewn
With sights, the ruefulest that flesh and bone
E'er put on; a miserable crowd,
Sick, hale, old, young, who cried before the cloud,
"Thou art our king, O Death! to thee we groan."
Those steps I mounted, while the vapours gave
Smooth way; and I beheld the face of one
Sleeping alone within a mossy cave,
With her face up to Heaven, that seemed to have
Pleasing remembrance of a thought foregone—
A lovely Beauty in a summer grave!

WILLIAM WORDSWORTH.

* 9 buried from the parish of All Saints at the parish of St. Sepulchre, 1 ditto at the parish of St. Giles, 2 ditto at the parish of St. Peter.

Extract from a Letter of Mr. Cornfield, Commercial Street, Northampton, 9th June, 1845.

"I beg now to forward you Bills of Mortality, published yearly by the parish clerk of All Saints, for the years 1831 to 1840, most of which I had by me, and those which were deficient I have had some difficulty to procure. They will, I think, supply you with answers to the first part of your inquiry better than any other sources, as all the original registers kept by Dissenters are deposited at the Non-Parochial Register Office, copies of them not being kept, except only in one or two instances. As these Bills of Mortality do not include the Catholic Chapel, I have obtained from the resident clergyman the number of baptisms registered there.

"Mr. Brown has kindly assisted me in examining the record of members belonging to the Old Baptist Chapel in this town, which commences in 1733, and appears to be a continuation of a former book. We do find that the numbers registered therein are very considerable during the period you mention, 1736 to 1776, including many persons not resident in the town, but from the adjacent villages. I can recollect that when I was a little boy, many persons had used to come regularly to the chapel every Sunday from many villages within the distance of five or six miles, some more; but, as at several of them there are now chapels built, the numbers from such are inconsiderable, although there are still a few. The congregation at the Old Chapel is large at the present time, and the number of registered members I should say near 300; notwithstanding there has been an off-shoot, and another large Baptist Chapel (Mount Zion) built within a few years. The members of the church at College Street (as is the congregation) are a mixed community as to principles, many regular hearers, and some members being Independents, which the constitution of the society admits of. I believe there are many of the latter persuasion who do not have their children baptized; and such also is the case with the Unitarians, as I am informed by Mr. Jones, their minister.

"I have not the slightest doubt that there are numbers of children born in Northampton who have never been baptized, either at church or chapel, in which opinion I am confirmed by the testimony of several ministers, and the parish clerk of All Saints; and that there are now great numbers, of the working classes particularly, omitted, and would be even more, but that the clergy at the churches refuse to bury any unbaptized person, especially children, with regard to whom the fact is easily ascertained; and it is this reason alone, I fully believe, that induces some of them to conform to the rite of baptism.

"William Cornfield, *Registrar.*"

Baptisms at the Roman Catholic Chapel, and *not* included in the Northampton Bills:—

Year.	No.	Year.	No.	Year.	No.
1831	25	1835	15	1838	31
1832	33	1836	28	1839	16
1833	18	1837	25	1840	17
1834	28				

"There are chapels now in Northampton:—Three Independent, *viz.*, King Street (or King's Head Lane), Castle Hill, Commercial Street. Three Baptist, *viz.*, College Street, Mount Zion, Kingswell Street, small. Two Wesleyan, *viz.*, Gold Street, large chapel, and congregation large; Todd's Lane, recently built. Primitive Methodist, small; Wesleyan Association; Unitarian; Providence Chapel, Calvinist (do not baptize infants); Roman Catholic, a new chapel just finished, the old one being converted into a school; The Friends' Meeting House."

Extract from an unpublished Paper on Insurance Finance, referred to p. 290.

Case 4.—The sum of π is paid by each of l_x persons, and by the l_{x+1}, l_{x+2} . . . l_{x+n} survivors at the beginning of every subsequent year, into a fund which invests money at compound interest; s is paid out on the death of each person at the end of the year in which the death occurs; what is the amount in the fund at the end of n years? What is the share of this amount falling to each of the l_{x+n} survivors?

Let the interest of money be convertible annually; the amount of £1 in a year $1+i$; the present value of £1 payable at the end of a year $\frac{1}{1+i} = v$. Then the rate of mortality being such that the survivors are l_x, l_{x+1} . . . l_{x+n}; the annual deaths $d_x = l_x - l_{x+1}$, $d_{x+1} = l_{x+1} - l_{x+2}$ . . .; the amounts paid into the fund will be πl_x, πl_{x+1} . . . πl_{x+n-1}; the amounts paid out of the fund will be $s d_x$, $s d_{x+1}$ . . . $s d_{x+n-1}$.

πl_x is paid into the fund; at interest it amounts to $\pi (1+i) l_x = \pi v^{-1} l_x$ at the end of the year, and after subtracting $s d_x$ paid out for deaths, the sum of $(\pi v^{-1} l_x - s d_x)$ is left; which at interest amounts in a year to $v^{-1} (\pi v^{-1} l_x - s d_x) = \pi v^{-2} l_x - s v^{-1} d_x$; add $\pi v^{-1} l_{x+1}$ for the premiums paid in at the beginning of the second year, subtract $s d_{x+1}$ paid out on policies at the end of the second year, and the amount in the fund is then $\pi v^{-2} l_x + \pi v^{-1} l_{x+1} - s v^{-1} d_x - s d_{x+1}$.

The same reasoning applies to future years, and the amount in the fund at the end of n years is evidently—

Eq.	Year.	
(30)	0	πl_x.
(31)	1	$\pi v^{-1} l_x - s d_x$.
(32)	2	$\pi v^{-2} l_x + \pi v^{-1} l_{x+1} - s v^{-1} d_x - s d_{x+1}$.
(33)	3	$\pi v^{-3} l_x + \pi v^{-2} l_{x+1} + \pi v^{-1} l_{x+2} - s v^{-2} d_x - s v^{-1} d_{x+1} - s d_{x+2}$.
(34)	n	$\pi v^{-n} l_x + \pi v^{1-n} l_{x+1} + \pi v^{2-n} l_{x+2} \ldots + \pi v^{-1} l_{x+n-1} - s v^{1-n} d_x - s v^{2-n} d_{x+1} \ldots - s d_{x+n-1}$.

Let $\frac{1}{m}$ be the mth part of a year, and the amount in the fund at the end of the $\left(n + \frac{1}{m}\right)$ year, after the policies lapsing in the fractional part of the last year have been paid, will be—

$$(35)\quad \left(1 + \frac{i}{m}\right)\Big\{ \pi (v^{-n} l_x + v^{1-n} l_{x+1} + v^{2-n} l_{x+2} \ldots + l_{x+n}) - s (v^{1-n} d_x + v^{2-n} d_{x+1} \ldots + d_{x+n-}) \Big\} - \frac{s d_{x+n}}{m}.$$

The number of survivors is $\left(l_{x+n} - \frac{d_{x+n}}{m}\right)$; and the share of each survivor is therefore—

$$(36)\quad \mathrm{H}_{x+n+\frac{1}{m}} = \frac{\left(1 + \frac{i}{m}\right)\Big\{ \pi (v^{-n} l_x + v^{1-n} l_{x+1} \ldots l_{x+n}) - s (v^{1-n} d_x + v^{2-n} d_{x+1} \ldots d_{x+n-1}) \Big\} - \frac{s d_{x+n}}{m}}{l_{x+n} - \frac{d_{x+n}}{m}}.$$

Multiplying all the terms by $v^{x+n} = v^x v^n$, the equation, without changing its value, becomes—

$$(37)\quad \Pi_{x+n+\frac{1}{m}} = \left(1+\frac{i}{m}\right)\left\{\pi\left(v^{x}\,l_{x}+v^{x+1}\,l_{x+1}\ldots v^{x+n}\,l_{x+n}\right)-s\left(v^{x+1}\,d_{x}+v^{x+2}\,d_{x+1}\ldots+v^{x+n}\,d_{x+n-1}\right)\right\}-\frac{s\,v^{x+n}\,d_{x+n}}{m}$$

$$\frac{}{v^{x+n}\,l_{x+n}-\frac{v^{x+n}\,d_{x+n}}{m}}.$$

If a life table has been framed correctly expressing the facts, and the usual columns D, N, C, M, have been tabulated, the last equation (37) may be conveniently represented by the following:—

$$(38)\quad \mathrm{H}_{x+n+\frac{1}{m}} = \left(1+\frac{i}{m}\right)\left\{\pi\left(\mathrm{D}_{x}+\mathrm{D}_{x+1}\ldots\mathrm{D}_{x+n}\right)-s\left(\mathrm{C}_{x}+\mathrm{C}_{x+1}\ldots+\mathrm{C}_{x+n-1}\right)\right\}-\frac{\mathrm{C}_{x+n}}{v\,m}$$

$$\frac{}{\mathrm{D}_{x+n}-\frac{\mathrm{C}_{x+n}}{v\,m}}.$$

$$(39)\quad = \frac{\left(1+\frac{i}{m}\right)\left\{\pi\,\mathrm{N}_{x\,|\,n+1}-s\,\mathrm{M}_{x\,|\,n}\right\}-\frac{\mathrm{C}_{x+n}}{vm}}{\mathrm{D}_{x+n}-\frac{\mathrm{C}_{x+n}}{v\,m}}$$

Making m infinite ($m=\infty$) the equation becomes—

$$(40)\quad \mathrm{H}_{x+n}=\frac{\pi\,\mathrm{N}_{x\,|\,n+1}-s\,\mathrm{M}_{x\,|\,n}}{\mathrm{D}_{x+n}} = \text{the value of a share in the fund immediately } \textit{after} \text{ the } (n+1)\text{th premium has been paid.}$$

Subtracting D_{x+n} from Eq. 38, and making m infinite as before, we have—

$$(41)\quad \mathrm{H}_{x+n}=\frac{\pi\,\mathrm{N}_{x\,|\,n}-s\,\mathrm{M}_{x\,|\,n}}{\mathrm{D}_{x+n}} = \text{the value of a share in the fund immediately } \textit{before} \text{ the } (n+1)\text{th premium has been paid into it.*}$$

Putting $s=1$; $\pi = a\dfrac{\mathrm{M}_{x}}{\mathrm{N}_{x}}=\pi_{x}$; $\Pi_{x+n}=$ the single premium which at the age $(x+n)$ will insure £1 at death; and making the required substitutions and reductions, we have—

$$(42)\quad \mathrm{H}_{x+n}=\Pi_{x+n}+\frac{\mathrm{M}_{x}}{\mathrm{D}_{x+n}}\left(a-1-a\frac{\mathrm{N}_{x+n}}{\mathrm{N}_{x}}\right).$$

And if $a=1$; $\Pi_{x}=$ the exact annual premium which will insure £1 at death; $\mathrm{H}_{x+n}=\Pi_{x+n}-\pi_{x}\,\mathrm{A}_{x+n}$, which is the formula in common use; and only applicable when the true premium has been paid from the first. Here $\mathrm{A}_{x+n}=1+\mathrm{A}$ of Mr. Milne at the age $x+n$; and $\pi_{x}=$ the precise annual premium, which, if commenced at the age x, will insure £1.

* I was not aware before the folio edition of the Report containing this important formula appeared, that it had been previously given under the article "Reversion" in the Penny Cyclopædia, or I should have mentioned the fact. In writing the article on the Northampton Table, the formula was required, and not finding it in the standard works of Bailey, Milne, Morgan, De Morgan, Jones, &c., I entered on the investigation given above; with which I should not have troubled the reader, had it been given in the article "Reversion" referred to: which is by Professor De Morgan, to whom the science of insurance is on many accounts so much indebted.

The following Tables exhibit the True and Erroneous Northampton Tables in juxtaposition. The logarithms given are those most useful to statists and actuaries, who may wish either to use or to ascertain the general results derivable from the True Northampton Table.

TABLE VIII.—TRUE NORTHAMPTON TABLE—*continued.*

Age.	C_x. Numbers Dying in every Year of Age.	D_x. Of 10,000 Born the Number attaining each Birth-day	P_x. Population kept up at each Age 0—1, 1—2, &c., by 10,000 Births.	Q_x. Sum of Column P_x; aggregate Population at each Age x, and upwards; also Years D_x will live.	$V^{x+1}.C_x$.	${}_1M_x$. Sum of Column $V^{x+1}.C_x$.	$V^x D_x$.	${}_1N_x = \Sigma(V^x D_x)$

On the Year 1841.

The *mean reading of the Barometer* for the year 1841 was remarkably low. The lowest mean daily reading during the year was 28·741 inches, and the highest was 30·341 inches, and consequently the range of the mean daily readings was 1·691 inches. The highest reading during the year was 30·388 inches, and the lowest was 28·697 inches; the range of the simple readings was therefore 1·691 inches.

On January 3rd there was a remarkable thunder storm, for some time the roar of thunder was one continuous roll, and the lightning was incessant; the reading of the barometer was as low as 28·806 inches. This was a travelling storm, passing from north to south, at the rate of about 60 miles per hour, and it was nearly 100 miles in breadth; its time of continuance at each place was nearly the same, and in every place it was preceded by a gale of wind, and accompanied with a heavy fall of rain, hail, and snow.

The temperature of the air for the year was somewhat below the average, its *range* during the year was 78°·8 being greater than usual, owing however, to the very low reading of 4° in January. The year was not distinguished by any high temperatures. The *average monthly range* of temperature was 38°·3; that in January, amounted to the very large value of 49°.

The forces of the north and south winds during the year were nearly equal in value; *the prevailing winds* were S. W.; S. S. W.; and W. S. W.

One hour out of 7 hours 40 minutes was calm during the day.
One hour out of 4 hours 10 minutes was calm during the night.

There *were* 7 *days during which the sky was cloudless*, and there were 29 *days during which the sky was wholly covered by clouds.*

Rain to the depth of 33·3 inches was collected in the gauge placed on the ground.

,,	28·2	,,	24 feet above the soil.
,,	18·6	,,	50 feet above the soil.

On the Year 1842.

The mean reading of the Barometer for the year 1842 was high. The highest mean daily reading during the year was 30·419 inches, and the lowest was 28·799 inches, occurring on the 18th and 25th of November, respectively. It is remarkable that the two days on which the mean barometer reading was highest and lowest during the year, were separated by seven days only. The highest and lowest simple readings during the year were 30·470 inches, and 28·587 inch respectively.

The greatest daily range in the readings of the barometer, was 1·376 inches on March 10.

The mean daily range in Spring was 0·185 inch; in Summer was 0·145 inch; in Autumn was 0·207 inch; in Winter was 0·185 inch; and for the Year 1842 was 0·181 inch.

On one day in 3, the difference of readings of the barometer during the day,

				was less than	0·2 inch.
,,	6	,,	was greater than 0·2 inch and less than	0·3	ditto.
,,	10	,,	,,	0·3 ,,	0·5 ditto.
,,	60		,,	0·5 ,,	0·6 ditto.
,,	80	,,	,,	0·6 ,,	1·0 ditto.
,,	in the year		,,	1·3 ,,	

The temperature of the air for the year was about the average value, its *range* during the year was 67°·3. On one day the temperature reached 90°. The highest mean daily value was 74°·3, and the lowest was 28°·3.

The mean daily range of temperature in Spring was 14°·6; in Summer was 20°·1; in Autumn was 11°·3; in Winter was 8°·3; and for the year was 13°·6.

The mean temperature for Spring was 47°·6; for Summer was 62°·8; for Autumn was 48°·2; and for Winter was 39°·6.

On one day in 13 the difference of temperature during the day,

					was less than	5°.
,,	4	,,	greater than	5	and less than	10
,,	4	,,	,,	10	,,	20
,,	12	,,	,,	20	,,	25
,,	14	,,	,,	25	,,	30
,,	100	,,	,,	30	,,	35

The water mixed with the air was such that its average weight balanced a column of mercury to the height of 0·326 inch. Its greatest mean daily value was represented by a column of mercury, of 0·601 inch in height, and its least by one of 0·141 inch in height; on the former day there were 6·6 grains of water in a cubic foot of air, and on the latter day there were 1·7 grains only.

The *prevailing wind* was S. W., and the next in order of prevalence were W. S. W.; S. S. W.; W.; N.; N. N. E.; S., &c. The mass of air passed from the remaining directions was small in amount.

One hour out of 5 hours 4 minutes was calm during the day, and
One hour out of 2 hours 48 minutes was calm during the night.

There were 18 *days* that were considered *cloudless*, and there were 47 *days* that were *overcast* throughout the day.

Rain to the depth of 22·6 inches was collected on the surface of the soil.

,,	20·0	,,	at the height of 25 feet.
,,	12·6	,,	at the height of 50 feet.

On the Year 1843.

The mean reading of the Barometer for the year 1843 was about its average value. The highest mean daily reading was 30·415 inches, and the lowest was 28·460 inches. The lowest and highest simple readings were 28·096 inches, and 30·437 inches respectively, and these occurred on January 13th and on January 19th; the former of these readings took place during a heavy gale of wind from the S.W. This storm was remarkable for its long continuance, and it extended over a large portion of the earth's surface. In the accounts from most places the minimum reading was preceded by lightning and thunder, and the direction of the wind was S.W. The minimum reading occurred first at southern places, and afterwards at northern; thus, the minimum occurred at Greenwich at 0 hours 53 minutes, P.M.; at Cambridge it was at 1 hour 35 minutes, P.M., the reading being 28·136 inches, the height of the cistern of the barometer above the level of the sea being about 88 feet; at Manchester it took place at 2 hours, P.M., and was 28·02 inches. The difference at Greenwich between the readings within 5 days 21 hours was 2·341 inches.

The greatest daily range was 0·857 inch.

The mean daily range in Spring was 0·166 inch; in Summer was 0·147 inch; in Autumn was 0·210 inch; in Winter was 0·198 inch, and for the year was 0·180 inch.

On two days out of 3 the difference of reading of the barometer was less than 0·2 inch.

On one day in	5	,,	greater than 0·2 inch	and less than	0·3	,,
,,	10	,,	0·3	,,	,,	0·5	,,
,,	60	,,	0·5	,,	,,	0·6	,,
,,	100	,,	0·6	,,	,,	0·9	,,

The temperature of the air for the year was about the average value, its *range* during the year was 69°·6. On one day the temperature nearly reached 90°. The highest mean daily value was 71°·5 and the lowest was 24°·8.

The *mean daily range* of temperature was 14°·2 in Spring; 15°·7 in Summer; 13°·5 in Autumn; 7°·3 in Winter, and 12°·7 for the year 1843.

The mean temperatures for these four periods were 47°·4; 59°·8; 50°·5; and 40°·0, respectively.

On one day in 12 the difference of temperature during the day was less than 5°.

,,	4	,,	greater than	5°	and less than	10°
,,	3	,,	,,	10	,,	15
,,	4	,,	,,	15	,,	20
,,	10	,,	,,	20	,,	28
,,	100	,,	,,	25	,,	30
,,	in the year.	,,	,,	30		

The water mixed with the air was such, that its average weight balanced a column of mercury 0 338 inch in height. On one day it balanced a column of mercury 0·590 inch in height, and its least daily value thus estimated was 0·136 inch.

The *prevailing wind* was W. S. W., and the next in order of prevalence were W. S. W.; S. S. W.; E. N. E.; W.; N. N. W.; S., &c. The circumstance of the E. N. E., being so prevalent is unusual.

One hour out of 5 hours 51 minutes was calm during the day, and

One hour out of 2 hours 41 minutes was calm during the night.

There was *not one day during the whole year that the sky was free from clouds*, there were, however, four nearly so; and there were 66 days that the sky may be considered to have been covered by clouds all day.

Rain to the depth of 24·5 inches was collected on the surface of the soil.

,, 22·5 ,, at the height of 25 feet above the soil.

,, 14·9 ,, at the height of 50 feet above the soil.

On August 9 of this year, *a great hail-storm* occurred at Cambridge, and visited Northamptonshire, Berkshire, Buckinghamshire, Dorsetshire, Gloucestershire, Kent, (at Rochester,) Leicestershire, Lincolnshire, Monmouthshire, Nottinghamshire, Oxfordshire, Rutlandshire, Worcestershire, Yorkshire, &c.; but at Cambridge it was most violent. [For a description of this storm see the Greenwich Magnetical and Meteorological Observations for the year 1843, page (268).]

On the Year 1844.

The mean reading of the Barometer for the year 1844 was about its average value. The highest mean daily reading was 30·378 inches, and the lowest was 28·669 inches. The lowest and highest readings from single observations were 28·525 inches, and 30·418 inches; the former took place on February 26, at 1 hour 20 minutes, immediately after a long and heavy gale of wind.

The mean daily range in Spring was 0·170 inch; in Summer was 0·144 inch; in Autumn was 0·175 inch; in Winter was 0·204 inch; and for the year was 0·173 inch.

On one day out of 3 the difference of reading of the barometer,

						was less than 0·1	inch.
,,	3	,,	greater than 0·1	inch,	and less than	0·2	inch.
,,	6	,,	,, 0·2	,,		0·3	,,
,,	10	,,	,, 0·3	,,		0·4	,,
,,	30	,,	,, 0·4	,,		0·5	,,
,,	80	,,	,, 0·5	,,		0·6	,,
,,	150	,,	,, 0·8	,,		0·9	,,

The greatest daily range in the year was 0·874 inch on February 24th.

The temperature of the air for the year was below its average value. Its *range* during the year was 68°·8. Its highest mean daily value was 71°·3, and its lowest was 25°·7.

The mean daily range of temperature was in Spring 17°·2; in Summer was 17° 2; in Autumn was 11°·7; in Winter was 8°·2; and for the year was 13°·6.

The mean temperature for these four quarterly periods were 48°·7; 59°·9; 50°·1; and 35°·8 respectively; the value for winter is much below the average for that period.

On one day out of 11 the difference of temperature during the day,

						was less than	5°.
,,	4	,,	was greater than	5°	and less than	10°	
,,	4	,,	,,	10°	,,	15°	
,,	5	,,	,,	15°	,,	20°	
,,	8	,,	,,	20°	,,	25°	
,,	14	,,	,,	25°	,,	30°	
,,	in the year	,,	,,	33°			

The water mixed with the air was such in quantity, that its average weight balanced a column of mercury of 0·315 inch in height. On one day it balanced a column of mercury of 0·565 inch in height, and its least daily value thus estimated was 0·135 inch.

The prevailing wind was the S. W. The next in order of prevalence were W. S. W.; W.; S. S. W.; N.; N. E.; and N. N. E. During this year the N. and E. winds were more than usually prevalent, and the compounds of the west wind were less prevalent than usual.

One hour out of 6 hours 31 minutes was calm during the day, and
One hour out of 3 hours 9 minutes was calm during the night.

There were two days in the year that the *sky was cloudless*, and nine others, during which the amount of cloud was so small that they may be considered as cloudless. There were 61 days in the year that the sky may be considered as having been *quite cloudy*.

Rain to the depth of 23·2 inches was collected on the surface of the soil.
,, 22·9 ,, at the height of 25 feet above the soil.
,, 14·6 ,, at the height of 50 feet above the soil.

On the Year 1845.

The mean reading of the Barometer for the year 1845 was about its average value. The highest and lowest mean daily readings were 30·406 inches and 28·755 inches. The highest and lowest readings in single observations were 30·445 inches and 28·659 inches. The extreme highest reading was less than usual, and the extreme lowest reading was greater, so that the yearly range was less than usual.

The mean daily range in Spring was 0·144 inch; in Summer was 0·151 inch; in Autumn was 0·195 inch; in Winter was 0·260 inch, and for the year was 0·188 inch.

On one day out of 3 the difference of the reading of the barometer,

					was less than 0·1 inch.	
,,	3	,,	greater than 0·1 inch, and less than 0·2 inch.

,,	in the year.		,,	1·0		

Therefore, there was a greater number of large changes than usually take place in one year. In fact the variations of the reading of the barometer were greater in amount, more numerous, and frequently very different from those of other years.

The temperature of the air was much below its average value. Its range during the year was 78°·3, this large range was attributable to a minimum reading of 7°·7 in February. The highest mean daily temperature was 71°·6 and the lowest was 19°·2.

The mean daily range of temperature in Spring was 14°·0; in Summer was 16°·0; in Autumn was 13°·3; in Winter was 8°·3; and for the year was 12°·9.

The mean temperature for these four quarterly periods were 43°·6; 59°·3; 49°·9; and 37°·6; the value for Spring is much below its average value, and that for Winter is also below the average.

On one day out of 29 the difference of temperature during the day,

					was less than 5°.	
,,	3	,,	was greater than 5° and less than 10°

The water mixed with the air was such in quantity, that its average weight balanced a column of mercury of 0·309 inch in height. On one day the quantity was such as to balance a column of mercury of 0·588 inch in height, and its least daily value thus estimated was 0·106 inch.

The prevailing wind was the S. W. The next in order of prevalence were W. S. W.; S. S. W.; N.; W.; N. W; N. N. W.; S.; N. E., &c.

One hour out of 6 hours 56 minutes was calm during the day, and
One hour out of 4 hours 0 minutes was calm during the night.

There were nine days in the year during which *the sky was considered* cloudless, and there were forty-eight days during which it was *covered by clouds*.

Rain to the depth of 22·3 inches was collected on the surface of the soil.
,, 19·0 ,, at the height of 25 feet above the soil.
,, 11·6 ,, at the height of 50 feet above the soil.

On the Period between 1844, *October* 16, *and* 1845, *March* 20.

It will have been observed that the mean temperature of the air during the Winter period of 1844 and the Spring period of 1845, was much below its average value. In the Greenwich Magnetical and Meteorological Observations of 1845, at page 254, are my remarks upon this period, and the following is copied from the Greenwich volume for the Year 1845.

"The period of time between 1844, October 16, and 1845, March 20, was "very remarkable for several unusual phenomena, but more particularly on "account of the mean temperature of the air being very different from that "of the average for the season, the amount of the departure from the average "temperature being at times very great and very continuous.

"From 1844, October 1 to 15, the temperature of the air was about that of "the average. Between October 16 and November 7, it was below the "average every day, and its mean amount of departure was 3°.

"Between November 8 and 20, the temperature was high, the departure "from the average being in excess (except on November 11, when it was "3° below the average), the mean amount of which was 6°.

"Between November 20 and 21 a great change took place; on the former "day the mean temperature of the air was 7° in excess, and on the latter day "5° in defect; this great change took place suddenly. On November 21 at "2 hours A. M. the temperature was 45°·5, and at 4 hours A. M. it was 41°·7, "and from that time it continued to decline. This was the beginning of a "remarkable period of cold, which continued till December 27; the mean "temperature of every day during this period being below the average by "quantities varying from 1° to 15°; the mean departure for the period was "7°; the interval of time between December 8 and 14 was the most severe, "the mean departure from the average being 12°.

"From 1844, December 28, to 1845, January 3, the mean temperature "was very nearly that of the average, and on January 4 a period of warm "weather set in, and continued till January 27, the excess above the average, "being from 1° to 11°; the mean excess during this time being 3°. During "the evening of January 27 the cold set in again with increased severity, and "from this time till March 20 the temperature was always below the average, "with one solitary exception, viz., the 26th of February, whose mean tem-"perature exceeded that of the average by $3\frac{1}{4}$°. The amount of this defect "from the average was at times very great. On February 7 and 8 it was "11° on each day; on the 11th it was 14°; on the 12th it was 20° (for ob-"servations on this remarkable day see p. 24, foot note on p. 25, and also the

" observations on pages 256 and 257*;) on February 20 it was 13°; on March 4 " it was 14°; and on the 5th; 6th; 7th; 12th; 13th; 14th; 15th; 17th; and " 18th days of March it was 14°; 16°; 10°; 11°; 20°·5; 20°; 16°; 15°; " and 13° respectively. It would seem therefore that the cold from the begin- " ning of March was more remarkable than at any other time during the winter " for its steadiness and its unusual intensity. Between January 28 and March 20 " the mean temperature of the air was 8°·5 in defect; in the cold weather of " December the temperature fell from 38° on the 1st, to 22° on the 6th; but " the temperature from the 5th of February declined much more rapidly " and to a much lower point. On Wednesday, the 12th of February, the " lowest thermometer reading was 7°·5 at the Observatory: at my residence, " which is within one mile of the Observatory, and S. S. W. of it, the minimum " was—1½°; this unusually low reading was very remarkable as occurring at " this part of the country. The temperatures in March were not less re- " markable: between March 3 days 4 hours P. M. and 7 days 8 hours A. M., " and again between 12 days 6 hours P. M. and 17 days at noon the tempera- " ture was at or below 32°. The temperature on March 13 was perhaps " more remarkable than any other; at noon on this day the thermometer " reading was 23°; this occurring so near to the vernal equinox is worthy of " especial notice, and it is without a parallel on record. The readings of " thermometers placed on different substances were also very remarkable; the " following are some of these—a self-registering minimum thermometer placed " on grass and read every morning at 9 hours, showed that on 1844, Decem- " ber 5, the minimum was 13°·7; on the 6th, it was 7°·9; on the 7th 8°·9; " on the 8th, 14°·9; on the 12th, 13°·0. On 1845, January 3, it was 17°·0; " and on the 30th, 13°·4; on February 1, it was 12°·7; on the 3rd, 12°·0; " on the 7th, 10°·9; on the 8th, 9°·7; on the 9th, 13°·0; on the 12th—6°·0; " (*i. e.* six degrees below zero); on the 13th, 9°·0; on the 17th, 13°·6; on " the 19th, 13°·3; on the 20th, 7°·7; on March 5th, 6th, 8th, 13th, 14th, " 15th, 18th, and 21st, it was 11°·0, 5°·9, 13°·8, 8°·9,—0°·2, 7°·5, 6°·7, " and 7°·2 respectively; and on many other nights it was less than 20°, " showing the very low temperature to which vegetation was subjected during " the winter. The lowest thermometer reading within the period was—12°·5, " being that of a thermometer placed on flax, and read on the morning of the " 12th of February, 1845.

" The direction of the wind on 1844, November 27, was S. W.; between " this day and December 26, it was N. E.; a period of calm succeeded and " continued till December 29; the N. E. wind then prevailed till 1845, Jan- " uary 2; on this and the following days the direction was S. W. then N. E. " till February 2; on this day the direction was S. W. being the first time, " except January 2, 3, and 4, that the wind had passed from this quarter since " 1844, November 27; a very unusual circumstance in this country. Between " February 2 and 19, the direction was S. or S. W., and it was generally N. E. " from February 19 to March 20."

Note.—In these Meteorological Returns—

Spring	means the months of	March, April, and May.
Summer	,,	June, July and August.
Autumn	,,	September, October, and November.
Winter	,,	December, January, and February.

At the Royal Observatory at Greenwich the cistern of the Barometer is considered to be 159 feet above the level of the sea.

* Of the volume for 1845.

INDEX

TO THE EIGHTH ANNUAL REPORT.

Afterlifetime, 279–80; *et seq.* Table VII., 337–339.

Agricultural counties, fluctuations of marriages (1812–22), 14; (1822–26) with wheat fluctuating at rather low prices the marriages varied little, 18; increase (1829–33), 24; fall (1834–7), 24.

All Saints parish, (Northampton), 320–324, 286; sub-district, 322; population, deaths, mortality *per cent.* in parishes, compared, *ibid.* Census in 1746 of All Saints and other parishes, 305–6. Tables IV., V., VI., 334–6. Mortality in 7 years (1838–44), 286.

Amiens, peace of, 14.

Annuities (on false hypothesis), 284; by true and false tables, 288, *et seq.*; according to the Equitable, 291. Table VII., 337, 9; X., 344, 5; XI., 346, 7. 286.

Austria, &c. mortality in, 43. *See* Foreign States.

Bank Restriction Acts (effects of), 13, 18.

Banns, marriages by, 104–123.

Baptisms (1795–8), 12; increase of (1813–15), 14; (1812–22), 16; (1823–28), 17.

Barometer, height of, in years 1841–7, 349. In 1841, 1842, 350; in 1843, 351; in 1844, 353; in 1845, 354. In the quarters of two years, (1844, 5), 45.

Birmingham, marriages at, 9; (1782–92), 10; "Church and King riots," *ibid.*; distress of buckle-makers, 10, 11; immense increase (1802–3), 12; rise and decline (1815–22), 14; (1816–22) marriages stationary and trade dull, with resumption of cash payments, 18; increase (1822–26) with fall of wheat, 18; fall in 1826, 18; rise in 1842–5, 26.

Births (1838–45), 1; (in quarters of 8½ years), 3; (in 1845), 36; proportion to population, *ibid.*; (in different counties), 36, 37, and 63, 64; illegitimate, 36, 38; proportion of sexes, 37, 38.

Birth Tables. Annual births (7 years), proportion of, to population, in divisions and counties, Table A, 63; Table AA (*i.e.* former table arranged in order of mortality), 64; proportion to population in *each* of years 1839–45, in divisions and counties, males and females, Table C, 71; total male and female births in 7 years, with sexual ratio, 72. Births in *each* of 7 years (1839–45), males and females, in divisions and counties, 124–5; the same in quarters, 126–7. Total Births (male and female) of 6 years, 1839–44, in divisions, 187; in counties, 188–191; in districts, 192–213. Births in *each* of the 6 years, in divisions, 214–217; the same in counties, 218–239. Sexual ratio of legitimate and illegitimate, in 2 years (1842 and 1845), 72; legitimate and illegitimate in 1845, and proportions of illegitimate per cent. on total births (each year, 1842 and 1845), 73; the same in districts, 74, 77; the same proportions of illegitimate in each of the 2 years, arranged in the relative illegitimacy of 1845, 78–80. Births of 1845, in quarters, and divisions and counties, 128–9; the same in districts, 130–141, Illegitimates of 1845, males and females, in quarters (divisions and counties), 142–3; the same (in districts), 144–155. Twin births of 1845, males and females, legitimate and illegitimate (in divisions and counties), 156; the same in districts, 157–164; Triple and Quadruple births, 165. Births of 1845, male and female, in divisions, 240–1; the same in counties, 242–245; the same in districts, 246–267.

Births and deaths in All Saints, 336; excess of births over deaths, 322.

Births, deaths, and marriages, in France, Austria, Prussia, 47, and proportions to population, compared with England, *ibid.*

Bristol (increase of marriages at, 1784–91–2), 10; (1813–15), 14, 17.

Brown, founder of the sect which bears his name, account of, 301–3; Independents, their opinions, 302.

Buckle-makers, distress of, 10, 11.

Camden's remarks on Northampton, 303–4.

Carlisle Table (annual premiums according to), 292.

Cartwright and other distinguished natives of Northampton, 301, 2,

Census of Northampton in 1746, 305–6; in 1084, 1746, &c. 313–316; Shoemakers and other trades, in 1831 and 1841, 308. Census of All Saints, 322–324.

Chapels registered for marriages, 98–9; chapels in Northampton, 309, 329; marriages in chapels, &c., 31–33. Tables of marriages in chapels, &c., for 1845, 104–5, and 106–123.

Chatham's administration, 8, 9, 27.
Church and King riots, 10.
Churches, chapels, institutions in Northampton, 308–10; proportion of, to population in twelfth century, 313.
Cornfield, Mr., (letter from) 329.
Corporation of Northampton, before and after Municipal Reform Act, 311–3.
Cosmo's visit to Northampton, 304.
Cowper's interview with the parish clerk of Northampton, 306–7.
Currency, history of, from 1797 downwards, 13, 15, 18, 21, 24.

Deaths (1838–45), 1; (in quarters of $8\frac{1}{2}$ years), 3; to per cent. of population, 39, and 63–4; (in 1845), compared with previous years, 38; reduction of mortality consequent on prosperity, 39; extract from Quarterly Returns, 40, *et seq.*
Death Tables. Annual proportion of deaths to population (7 years), in divisions and counties, Table A, 63; Table AA (*i.e.* former table arranged in order of mortality), 64; Table D, proportion of male and female deaths (1838–45) to population, in divisions and counties, 81. Deaths in 1838–45 (males and females), in divisions and counties, 166–7; in quarters, 168–171. Deaths in 7 years (1838–44) at different ages (males and females), in divisions and counties. 187–191; the same in districts, 192–213. Deaths in *each* of the 7 years, males and females, at different ages (distinguishing months), in divisions, 214–217; the same in counties, 218–239. Deaths in 6 years (1839–44) under 1 year, distinguishing months and sex, 268. Deaths in London in 1845, at different ages, from 95 causes, males and females, 82–89; the same for 1846, 90–97. Deaths in quarters of 1845 (males and females), in divisions and counties, 172–3; the same in districts, 174–186. Deaths in 1845 at different ages (distinguishing months and sex), in divisions, 240–1; the same in counties, 242–245; the same in districts, 246–267.
Demoivre's hypothesis, 279, *note.*
Diseases fatal in London (in 1845) 82–9; (in 1846) 90–7.
Dissenters' chapels registered, 98–9; marriages therein, 31–3; 104–23.
Doddridge's Academy at Northampton, 305.
Doomsday survey, 294–5, 313; (transcript from), 326–7.

Equitable Society, 278; amount of its engagements in 1840, 278; its experience, 291–2.
Expectation of life, 279, 280. *See* Afterlifetime.
Exports (in 1781), 10; (in 1795, 1798), 12; (1827–37), 23; (in 1837–41), 24, 25.

False Northampton Tables, 282–284, compared with True, 287–8, *et seq.* Tables III., 332–3; XI., log. 346–7.
Farr's, Mr., Letter to Registrar General, 277 *et seq.*
Female population, and proportion of wives, widows, and spinsters, in Ireland, and some continental states, 100.
Fire at Northampton, 304.
Fluctuations of marriages. *See* Marriages.
Foreign States (returns from) 100. Naples, 44. France, Austria, Prussia, 47. Marriages of former years in various European countries, 62. France in 1844 (movements of population), births, legitimate, illegitimate, still; deaths, from accident, suicide, small-pox, other epidemics, &c., 270–275. Sweden: Stockholm, population, deaths, mortality per cent. (1821–40), 276.
France (returns from), 47; also in 1844, 270–275; marriages in former years, 62.

Glaisher's, Mr., Meteorological Report, 349 *ad fin.*
Gobion's manor, 317.

Hanover and Holland, female population and proportion of wives, &c., 100.
Hardwicke's Act 6, 7.
Houses and population of Northampton since 1084, 313–4; of the four parishes of Northampton at five Censuses, 315; annual value of houses at Northampton, 317.

Illegitimate Births, 36; in divisions, 38; (proportions of), 72–3, 74–7, 78–80. Illegitimates of 1845, 142–155. Twin illegitimate, 156–164; in France, 270.
Imports (of wheat in 1801–3), 13; (of cotton and wool in 1793–1803), 13; (of cotton in 1812), 15; (1812–14), 16; great decrease in 1816, 16; except in cotton, *ibid.*; (immense importation of wheat in 1817–8), 18; (increase of cotton and wool in 1824–5), 20; (wheat in 1829–36), 22; (cotton, wool, silk, 1829–37), 23; (wheat, 1838–42), 24; other importations, 25.
Independents, their opinions, 302.
Ireland, female population and proportion of wives, &c., 100.
Italy, mortality in, 43. *See* Foreign States.

Lancashire and Cheshire, fluctuations of marriages (1812–22), 14; increase steady (1829–36), 24; fall in 1837, 24; fall in 1841–2, 24.
Leeds, marriages, 9, 11; great increase of marriages (1802–3), 12; (1822–26), 17; fall in 1826, 18; rise (1842–5), 26.
Leland's visit to Northampton, and observations, 299, 300.
Letter to the Registrar-General, Mr. Farr's, 277, *et seq.*; Mr. Cornfield's, 329.

Licence, cost of, 31, and marriage fees, 32. Marriages by licence or banns, &c., Tables, 104–123.
Life insurance, 277–8; proprietary offices, 279; mutual, *ibid.*; insurance founded on false and true tables, 337–9.
Life (value of) in last and present centuries, 318.
Liverpool, sudden increase of marriages (1797–8), 11; increased exports, 12; increase of marriages (1802–3), 12; (1822–5), 17; rise (1842–5), 26.
London, marriages at (1757–63), 9; (1840–5), 26.

Manchester, fluctuations of marriages (1757–63), 9; (1781–93) rapid increase, 11; decrease (1793), 11. Suffering (1795), *ibid.* Immense increase of marriages (1802–3), 12; fluctuations (1813–22), 14; (1822–6), 18; fall (in 1826), 18; rise (in 1842–5), 26.
Manufactures of Northampton, and trades, 307–8.
Marriages (1756–1845), 8; *fluctuations* of, 6, 8, &c.; (with prices, consols, railways, 1839–45), 6; rise (1757–64), from scarcity to abundance, war with France, conquest of Canada, &c., 8, 9; comparative increase of same period at particular places, 9; *fluctuations* (1782–87), 9; peace restored, Pitt's plan for extinction of national debt; his commercial treaty with France, rise in the funds, 9, 10 (also 29); exports increased, 10; *rise of marriages* (1788–1792), fall of wheat, rise of funds, accumulation of capital, interest low, canals, 10; *decrease of marriages* (1793–5), check in speculation, fall of the funds, bankrupts more than doubled, issue of Exchequer bills, France declared war, rise of provisions, great distress, 10, 11; *increase of marriages* (1796–8), conjointly with rise and decline of wheat, fall of the funds, increase of taxation, war, mutiny, rebellion in Ireland, suspension of cash payments, but employment of the people greatly augmented, as shown by exports; poor-relief extended, expenditure increased, labour market improved by the war, 11, 12; *declension of marriages* (1799–1801), *sudden rise* (1802–3), being the greatest fluctuation on record, 12, caused by previous unseasonableness of weather, scarcity, high prices, and subsequent abundance and cheapness, with rise of wages, *ibid.* and 13, 14; manufactures, importations, and tonnage continued to increase rapidly in the same period, 13; rapid increase of inconvertible notes and speculation, 13; depression and revival aided by change of political events, 14; *marriages varied little* (1804–11), 14; *great fluctuation* (1812–15), concurrent with decline of wheat from 129*s.* to 66*s.*; having been 157*s.* in Aug. (1812), 15; increased consumption of malt, 14; increase of inconvertible paper; transition from dull trade, riots, war, to peace and new commercial advantages, 15 (giving for 5 marriages in 1812, 6 in 1815, 14); *decline of marriages* (1816–17) coincident with deficient crop, rise of prices, with fall of revenue, repeal of income-tax, reduction of malt tax, fall of wages, &c., 16; *increase of marriages* (1818–21) with fall of prices from importation and rich harvest, diminished charge of poor-law, 16, 17; check to speculation, pressure of war-debt, riots, agitation, also other historical events indicating distress and slow recovery, (of the period 1816–21,) 17; *fluctuations of marriages* (1822–8) considerable in towns, inconsiderable in country, 17, 18, with wheat rising and falling between 45*s.* and 69*s.*; *rise* in particular towns, 17; *increase of marriages* in 1825 with artificial prosperity, and fall in 1826, with collapse in the market, 21; prices high at this period, 20, 21; *increase of marriages* (1827–8), and recovery from depression, 21; *decrease of marriages* (1829), with depression and riots, 23; *continuous rise of marriages* (1830–4), with partial distress at the commencement of the period, but overcome by good wages, abundant crops, thriving trade, manufacturing and mining prosperity towards the end of it; fall of wheat from 64*s.* in 1830 to 46*s.* in 1834; increase of exports from 60 million in 1830, to 73 million in 1834; increase of imports, 22, 23; *fluctuation of marriages* (1835–7), trading prosperity, speculation, multiplication of joint-stock banks, fall of commercial credit, 23; marriages of 1835–6 checked by new poor law, 23, 24; *decrease of marriages* in 1837 with rise in bread, depression, decline of exports from 85 million in 1836, to 72 million in 1837, and similar fall of wool import, *ibid.*; *increase of marriages* (1839), with gradual declension to 1842, while provisions fell, 24; general strike of cotton-spinners (1842); expenditure in excess of revenue (1837–43); *great fluctuation of marriages* which rose in the period (1842–5), with new tariff and improved revenue; principally in Western Division, where employment on railways was most active, 26; general observations, 26–31, on the marriage returns, as affected by cessation of war, abundance or scarcity of food, extension of works, 26, 27; wages, speculation, political movements, 27; opening of new territories, 29; steady progress, 30.
Marriages (1838–45), 1; (in the quarters of 8½ years), 3; (in divisions and counties,

with proportion to population, 1839-45), 4. 5, 63-5; (fluctuations of), 4, 6, *et seq.*; observations on the proportion of marriages to population, from earliest records to 1845 (with tables), 30, 31; marriages under 21 years (in 1844), 69, 70; (in 1845), 70.

Marriage Tables. Eleven divisions of England (1754-1837, 1839-1845), Table II., 48, 49; in counties (same years), Table III., 50-55; metropolitan counties, Portsmouth, Plymouth, Bristol, Bath, Birmingham, Manchester, Liverpool, Leeds, Newcastle, Hull, York (in same years), Table IV., 56, 57. The same returns in divisions, counties, particular places, repeated in periods of 5 and 10 years, Table V., &c., 58, *et seq.*; (counties) Table VI., 59, 60; (in particular places) Table VII., 61. Persons married in certain countries of Europe, 62. Annual marriages (7 years) (proportion of, to population) in divisions and counties, Table A, 63; Table AA (being former table of counties arranged in order of mortality), 64; proportion of marriages to population in each of the years (1839-45), in divisions and counties, Table B., 65; mark-signatures, in divisions and counties (1839-45), 66; (proportion of, to the married), 67, 68; in 1844, proportion of married under 21, of remarriages, of marks in divisions and counties, 69; the same for 1845, 70; dissenters' chapels registered, 98-9. Marriages (1839-45) in divisions and counties, 101; the same in quarters, 102-3. Marriages of 1845 in accordance and non-accordance with Established ritual, in the chapels of Roman Catholic and other denominations, by licence, banns, &c. (in divisions and counties), 104-5; the same in districts, 106-123; marriages in quarters (1845) 104-123; bachelors, widowers, with spinsters, widows (in divisions and counties), 104-5; the same in districts, 106-123. (1845) Remarriages, minors married, mark-signatures, 104-5; the same in districts, 106-123.

Marriages, according to rites of the Church or otherwise, 31, 32, 33; after banns or licence, 31.

Marriage Act, Lord Hardwicke's, 6, 7.

Married in former years, in certain European States (numbers of persons), 62.

Marks, signing by, 32-3; considered as educational test, *ibid.*; proportion of mark-signatures in counties (1839-45), 35. Tables, 66-8; in 1844, 69; in 1845, 70, and 104-123.

Meteorology in four quarters of 1844, 5, 45; of the years 1841-7, 349; of the years 1841-2, 350-1; of 1843, 351-2; of 1844, 353-4; of 1845, 354-5; of the period between 16th October, 1844, and 20th March, 1845, 355-6. *See* also extracts from Quarterly Returns for 1845, 40-46.

Middlesex and Surrey, marriages in (1764-92), 10; (1799-1803), 12; (1813-15), 14; (1822-6), 17; fall in 1826, *ibid.*; steady increase (1829-36), 24; fall in 1837, 24.

Mining schemes, 19, 20.

Minors and persons of age (1843-5) married, 34; minors in 1844, 69; in 1845, 70; in divisions, 104-5; in districts, 106-23.

Morgan's tables of life-annuities, 278; the same on the experience of the Equitable, 291-2.

Mortality in Austria, Italy, and France, 43; at Naples, 44, 47. *See* Foreign States.

Mortality in Northampton (in 1741-80), 316; All Saints (in 1838-44), 335-6. *See* Northampton bills of mortality.

Naples, births, marriages, deaths, population, 44. *See* Foreign States.

Newcastle, marriages, 9; progressed slowly (1763-95), 11; great increase (1802-3), 12; rise (1842-5), 26.

Northampton bills of mortality, history and description of, 281-301, 305-6; more correctly described as All Saints' Table, 320; improved by elegiac effusions, 306-7; average life at Northampton, according to Price, 279; average life improved within a century, 318.

Northampton true table, how constructed, 285-6; old table, how constructed, 281-4. Table I. exhibiting deaths from four returns, and reduced (in Table II.) for comparison, 282; Price's table. and another on the same model, both right if the population were stationary, 284; true and false tables compared, 287-93. True and False Tables, annuities, premiums, &c., III., VII., VIII., IX., X., XI., 330-47.

Northampton, history of, 293-320; its site, 293; mentioned in Saxon chronicle, 293; burnt by Sweyn, 293; devastation by Northumbrians, 293; Earl of Northampton married to Judith, 293; church grants of Simon, a provision against the day of judgment, 294; his fortifications, 295; number and value of houses (*from Doomsday*), 294; Easter and Christmas celebrated, 295-6; Becket summoned to Northampton, 295; constitutions of Clarendon, 295-6; Richard I.'s charter, 296; John's charter, 296; Henry III.'s charters, 297; Richard II.'s charter, 298; charter of incorporation, 298-9;, other charters, 305, *see* also 311. Contribution levied by Henry III., 296; present for the purchase of books, 296; University founded here, and Fuller's commendation, 297; the town defended by Simon de

Montfort against the Royalists, 297; parliament at Northampton in 1266, 297; last parliament there, 298; payment of members, 298; paving act of Henry VI., 298; water pipes, 298; other waterworks, 307; Lollardy in Northampton, 298; measures recommended by Morton for securing the peace, liveries, &c., 298–9; popular constitution of the borough repealed, 299; Leland's visit to Northampton and notes, 299; church lands mortgaged, and thereupon Petie's advice to the king, 300; surrender of religious houses, 300; Henry VIII.'s act, providing for repair of the town, 301; guild fees, 301; town visited by Henry VIII. and Elizabeth, 301; Robert Brown, founder of the Brownists, 301–3; puritans in Northampton, 302; Camden on enclosures: the levellers, 303; plague, 303; Northampton in the interest of Parliament in the civil wars, 303; described by Leland, Cosmo, &c., 303–4; great fire, 304; act for rebuilding, 304–5; Doddridge's academy and other educational institutions, 305; hospitals, libraries, museums, &c., 309; dispensary, asylum, workhouse, &c., 310; infirmary, 306; ancient pottery, 307; scarlet well, 307; cotton, stocking, shoe manufactures, 307–8; census of shoemakers and other trades, 308, 314; churches and chapels, 308–9; lodges, friendly society, charities, &c., 309–10, also 306; relief of the poor, 310; courts of justice, &c., 310, 311; banks, traffic, fairs, 311; public amusements and accommodations, 311; municipal powers in the hands of commissioners, 311; report of commissioners of inquiry into corporations, 311, 12; corporate property, assessed taxes, municipal and political rights, 312; municipal reform act, 313; progress of the population and houses of Northampton, 313–316; mortality (in 1741–80) and annual rate, 316; increased value of real property, 316–7; increase of annual income and price of provisions, 318; improved value of life in last and present centuries, 318; summary review, and contrast of past and present, 318–20; dispensary named by Victoria, 320; parish of All Saints, and Registration district, 320; mean annual mortality per cent. (in 1838–44) compared with that of England, &c., 321; mortality of All Saints' parish compared with that of adjoining parishes, 322; mortality of shoemakers in All Saints, &c., 322; excess of births, 322; emigration, 323; extract from the last census of All Saints, 323–4; sources of error in Dr. Price's table, 324–5; Doomsday Book (extract from), 326–7; reprint of a bill of mortality, 328; letter from Mr. Cornfield, 329; children not baptized, 329; baptisms at the Roman Catholic chapel, 329; chapels now in Northampton, 329.

Northampton, town of, described by Leland, Camden, Cosmo, and a writer in 1675, 303–4. Notes of the first, 299, 300.

Norway, female population and proportion of wives, &c., 100.

Peel's Act (of 1819), 18.

Petie, the prior, recommended for promotion, 300.

Pitt's administration, 9; treaty with France, 9; plan for extinction of national debt, 9; observations on parish relief and multiplication of children, 12; effects of his advice, *ibid.*

Plague, its ravages in London and Northampton, 303.

NOTE.—The remaining Parts II., III., and IV., are printed only in Folio. They are as follow:—

II. Tables of the Male and Female Population in the Districts and Sub Districts of England at the Censuses of 1801, 1811, 1821, 1831, and 1841, and of the Houses in 1841.

III. Tables of the Ages of the Male and Female Population in the several Districts and Sub-Districts of England, derived from the Census Returns, 1841.

IV. Tables of the Male and Female Population of the Parliamentary Counties as constituted in the Years 1801-41; and of the Ages of the population of the Counties, 1841.

REPORT.

To the Right Honourable Sir GEORGE GREY, Bart., M.P.,

Her Majesty's Principal Secretary of State for the Home Department.

Sir, *General Register Office, August* 1, 1848.

I have the honour to submit to you the Annual Abstract of Marriages, Births, and Deaths, registered in England.

145664 marriages, 572625 births, and 390315 deaths were registered in the year 1846.

The following tables present a comparative view of the marriages, births, and deaths registered in the 9 years 1838–46 (*a*) (*c*).

The table (*b*) shows the proportion of marriages, births, and deaths, to the population in the several years 1839–46; and is calculated on the

(*a*)—See Table (*c*), p. 2.

Years	1838	1839	1840	1841	1842	1843	1844	1845	1846
Marriages	118067	123166	122665	122496	118825	123818	132249	143743	145664

* Eighth Report of Land and Emigration Commission, p. 40. The number of emigrants who embarked from *English ports* is stated in the Reports; but it is notorious that many Irish emigrants embark from Liverpool. The Emigration Report does not, unfortunately, distinguish the birthplace of the emigrants.

(*b*)

Years.	To 100000 Persons Living, (50000 Males, 50000 Females.)			Excess in the Rate of Births over the Rate of Deaths.
	Persons Married.	Births.	Deaths.

	One in			
Highest Year	(1846) 58·38	(1846) 29·71	(1845) 43·55	(1845) 86·51
Lowest Year	(1842) 67·89	(1839) 31·48	(1845) 48·03	(1840) 110·25

assumption that the population increased at the same rate during the 8 years 1839–46, as during the years 1831–41.

The increase of the population during the years 1801–41, has been regular; and it is not probable that changes in the rate of increase will affect the rate of mortality, birth, or marriage, to any considerable extent. In some countries the excess of births over deaths indicates the exact increase of the population; but in England, through an omission in the Registration Act, all the births are not registered: and there is besides a constant movement of the population: emigrants and other persons are every year leaving the country, while the Irish, the Scotch, and foreigners, are entering and settling in this division of the kingdom. With so many unknown elements the equation of increase becomes indeterminate; and as near an approximation to the true rate of increase is obtained by using the rate which prevailed in the years 1831–41, as by any other method that can be devised.

The presentation of my last Report was delayed to enable me to insert

a series of elaborate calculations, based on the population returns, which it was necessary to re-arrange, and the deaths in 7 years; showing the relative rate of mortality among males and females of different ages in half the divisions, counties, and districts, of England. This series exhibits more clearly perhaps than anything else can the sanatory state of the several parts of the country: it is completed in the Appendix to the present Report, which also contains an account of the population of each district and sub-district in the years 1801, 1811, 1821, 1831, and 1841, derived from a re-arrangement and careful collation of all the census returns.

Marriages.—In my Eighth Report, which, from the circumstances above referred to, has only recently been presented to Parliament, I analyzed the fluctuations in the marriages, and the causes which appeared to affect those fluctuations, in the 90 years, 1756–1845. To that analysis I must refer in order to avoid repetition.* I shall quote one passage, as the returns of 1846 form a part of the remarkable series which commenced in 1842:—

"The fluctuation in the marriages of a country expresses the views "which the great body of the people take of their prospects in the "world; and judged by this test they were never more sanguine than "in the years 1844 and 1845. The *annual* average price of wheat fell "from 71*s.* a quarter in 1839, to 66*s.*, 64*s.*, and 57*s.* through the 3 "subsequent years, and remained steadily at 50*s.* and 51*s.* through "1843, 1844, and 1845.

"The 3 per cent. Consols rose from 89 in 1841 to 94 in 1842, to "96 in 1843, and to 100 in 1844, when the 3½ per cents. were reduced. "In 1842, 3, 4, 5, the great changes in the tariff were effected. "Commerce revived from the languor under which it suffered in 1842; "enterprise awoke, money was called for, and labour was set in motion "on all sides with the real and imaginary capital current. Great "numbers of persons were engaged on the railways, a new field of labour "on which the Chancellor of the Exchequer has stated that 6 million *l.* "were expended in 1844, and 14 million *l.* in 1845.

"Under these circumstances 50000 more persons married in 1845 "than in 1842. Few examples occur of such an increase in the "marriages in England since the year 1756, as seen in the Table (*d*),

TABLE (*d*)—Number of Persons Married, Registered in each Year, from 1756 to 1846.

* Eighth Annual Report, presented to both Houses of Parliament by command of Her Majesty, 1848, pp. ix. to xxvi.

" which shows the number of persons married, or double the number of " marriages returned every year since 1756."

The numbers of persons married in the 5 years, 1842–6, were 237650, 247636, 264498, 287486, 291328; the excess in 1846 over the numbers married in 1842 was 53678, which is an increase of nearly 23 per cent., or, correcting for increase of population, 16 per cent. The number of women living between the ages of 15 and 45 was 3812651 in 1841; and judging from the analogy of other countries, about 2 million of the numbers were unmarried. It is evident that the true tendency to marriage is expressed by the proportion the marriages in a year bear to the unmarried women in that year. But the marriages in 1844 and 1845 were much above the average; the proportion of unmarried women left in 1846 would therefore be less than the average. Consequently the fact that to 100000 persons (50000 males and 50000 females) of all ages living, there were 1713 persons married in each of the years 1845 and 1846, implies that the disposition to marry was rather greater in the latter than in the former year. On examining the returns more in detail it will be seen that the excess of marriages occurred in the first half of the year 1846; in the last quarter there was an actual decrease in the number of marriages. At the same time there was a large increase in the number of deaths. It will be observed that the increase of the mortality began in the quarter ending June 30th; and I believe that the two series of returns give a true view of the condition and prospects of the people in 1845 and 1846. (*e*, *f*)

The marriages in Yorkshire were 14963 in 1845 and 14742 in 1846; in Lancashire 20559 in 1845, and 19810 in 1846.

Looking at 12 of the principal towns, Birmingham was the only place in which the marriages were considerably more numerous in 1846 than in 1845.

The numbers of criminals committed in England in the 5 years 1842–6, were 31309, 29591, 26542, 24303, and 25107. The fiats of bankruptcy issued in the 5 years were 1655, 1259, 1099, 1160, 1532. As the marriages increased the crimes decreased progressively down to 1845; they began to rise in 1846 as the marriages fell off. The Poor Law accounts end, unfortunately, at Lady-day; so that the results cannot be conveniently compared with other returns. The number of persons relieved in the two years ending Lady-day 1846 and 1847, were 1332089 and 1721350; and the expenditure in maintenance and out-relief was 4011920*l.* and 4367055*l.* The numbers of adult able-bodied paupers relieved in the quarters ending Lady-day 1846 and 1847, were 382417 and 562355. There are no returns for the intervening quarters of 1846. The money received by the savings' banks in the three years 1844–6, were (excluding Friendly Societies,) 1798165*l.*, 1427581*l.*, 1236621*l.*; the money paid out was 700819*l.* 1424346*l.*, 1021450*l.**

I will enumerate as rapidly as possible the circumstances and the public events which affected the prospects of the people in 1846.† The potato disease first appeared in 1845. The effects were adverted to by Her Majesty in opening Parliament (January 19, 1846). "I have to "lament that, in consequence of a failure of the potato crop in several "parts of the United Kingdom, there will be a deficient supply of an "article of food which forms the chief subsistence of great numbers "of my people." The winter of 1845–6 was mild, and an abundance of green vegetables supplied, to a certain extent, the partial loss of the potato. In the absence of a system of agricultural statistics in this country it is impossible to estimate the extent of the failure of the potato or corn crop; but it is tolerably certain that the produce of wheat in 1846 was below that of the three previous years. The average price of wheat, which was 45*s.* or 46*s.* a quarter during the first 22 weeks of 1845, rose progressively to 60*s.* in October or November, when some relaxation in the corn laws was acticipated: prices fell, and ranged from 54*s.* to 57*s.* in the first 20 weeks of 1846. The new corn law received the Royal Assent on June 26, and the average price fell to 45*s.* for the weeks ending August 8 and 15. The spread of the potato blight was rapid and general. The worst anticipations entertained by the Government in 1845 were realized; and none of the provident precautions taken by Parliament to facilitate the supply of food for the population of these islands proved unnecessary. The wheat crop, though not abund-

* The Criminal Tables prepared at the Home Office by Mr. Redgrave for 1846, page 5; Fourteenth Poor Law Report, page 85; Tables of Revenue, Part XVI., Sec. A, page 11.

† The returns referred to have been all made to Parliament, and will be found with others on the same subjects, in the Tables of the Board of Trade, Mr. Tooke's 4th volume on Prices, an able Digest of Facts by Mr. Danson, read before the London Statistical Society, Journal, vol. xi., p. 101: or the valuable Appendix to the Report of the Committee of the House of Commons on Commercial Distress.

ant, was of good quality; but the weekly average price ranged in the last 11 weeks of 1846 from 60*s.* to 62*s.* The price of meat was above the average in 1846; tea, coffee, sugar, and other articles of common consumption had been rendered cheap by extended competition or alterations in the tariff. The coffee imported into the United Kingdom in the five years 1842–6 was 41, 39, 47, 50, and 52 million lbs.; the tea entered for home consumption, 37, 40, 41, 44, 47 million lbs.; the raw sugar for home consumption, 433, 451, 464, 547, 585 million lbs.

The number of quarters of malt on which duty was paid in England, may be inferred from the gross receipts of the Excise for that article;* which, in the five years 1842–6, were 3937100*l.*, 4187400*l.*, 4285900*l.*, 4316200*l.*, 4500700*l.*,† The increase in the duty was 14 per cent. from 1842 to 1846, and the increase from 1845 to 1846 exceeded four per cent. The quantities of wheat of home growth, returned as sold in England and Wales in the markets inspected for the official averages, have been recently published.‡ Taking the quantity 100000 quarters for unity, the relative quantities sold in the four years from 1843 to 1846 were 53, 55, 67, 60; and the quantities of imported wheat and wheat flour (stated as wheat), entered for home consumption in the same years were as 10, 10, 3, 30; when the average annual prices were 50*s.*, 51*s.*, 51*s.* 55*s.*§ The average annual importation of wheat entered for consumption in the six harvest years Sept. 1832–8 was 127151 quarters; in the six harvest years 1838–44 it was 2374372 quarters.‖ In the first period, the greatest quantity imported in a year was, 329962 in 1832–3; the least 27707 quarters, in 1835–6: in the second period, the greatest quantity imported in a year was 3560957 quarters, in 1838–9; the least quantity, 1606912 quarters, in 1843–4. The average price was 50*s.* a-quarter in the harvest years 1832–8, and 62*s.* in 1838–44. The quantity of wheat imported (476190 quarters) in the harvest year 1844–5, though not considerable, was more than had been imported in any year from 1832 to 1838; the importation (2732134 quarters) in 1845–6 was less than was imported in the year 1838–9, and in 1841–2.

The quantity of food which a country imports does not depend merely on its wants; it depends on its ability to pay for food from abroad; the ability itself varying with the people's powers of production and the prices of commodities in the foreign market. A purely agricultural ill-cultivated country, such as England was in the middle ages, and such as parts of Ireland and France are, suffers more from the failure of a crop than a population like that of England now, whose income is derived from the several sources of agriculture, manufactures, and commerce. It is not the less true that the partial destruction of the crops is an immense loss to the country. In the

* The duty on malt has, since 1840, been 2*s.* 7*d.* a bushel, *plus* 5 per cent.

† Tables of Revenue, Part XVI., Sec. A., p. 33. In another part of the return it is stated that the number of bushels of malt on which duty was charged was nearly 31, 31, 32, 31, and 36 million bushels. Both returns agree in throwing a considerable excess on 1846.

‡ Tables of Revenue, &c., Part XVI., Sec. A., 1846, p. 66, published 1848.

§ Pence are omitted throughout.

‖ Mr. Canning's Act, regulating the importation of corn, passed in 1828; Sir Robert Peel's first Act in 1842, his second in 1846.

harvest year 1844–5, the bread grown in the kingdom was nearly sufficient; and it was exchanged by the producers for money, labour, or commodities, with the home population. In 1845–6 the wheat alone imported must, at the average price in England, have cost the consumers more than 7 million *l.*, which, after deducting freight, expenses, and the profits of dealers, went in money and commodities to the foreigner.

If the payment came from the unreplaced capital of the country it was a pure loss; but it is quite possible that a part of it was reproduced by the increased industry of the people. It can never, however, on either supposition, be a matter of indifference whether the country produces its own food. In favourable circumstances, agriculture, employing animals, plants, the earth, the atmosphere—produces almost as much bread, vegetables, and meat as 28 million people consume. Independently of all consideration of price, this blessing of abundance is in different degrees shared by all. Again, when, from the state of the weather, or from the diseases to which plants, as well as animals, are liable, the produce of food is scanty, or a great portion of it is destroyed, part of the labour of the people, as well as the productive power of the earth, the air, and grain-yielding plants is annihilated; and can only be replaced effectively by the accumulations of the past, or the excesses of the coming year. The loss is real; though the elevation of the price is a compensation to the grower for diminished quantity, and the importation mitigates the severity of the pressure on the consumer.

The extent of the failure of the potato crop became evident in August;* Ireland was thrown into a state of panic; and in England, as the year advanced, the pressure on the people must have been more severe, than the price, or the importation of wheat implies; for the obvious reason that the lower classes, who fed on potatoes, could not purchase wheat in any quantity. On October 1st, by Order in Council, a Form of Prayer was issued to be said in churches "in this time of scarcity."

The official value of imports into the United Kingdom in the 5 years, 1842-6, was 65, 70, 75, 85, 76 million *l.*; of exports, 114, 132, 146, 151, and 149 million *l.* The *declared value* of the produce and manufactures of the United Kingdom exported in the 5 years was, 47, 52, 59, 60, 58 million *l.* Both the imports and exports began to decline in 1846. The decrease in the quantity of cotton-wool imported in 1846 was remarkable: the importation in the 5 years 1842-6 was 532, 673, 646, 722, and 468 million lbs. The price of cotton rose at the close of the year. The imports of flax, hemp, sheep's wool, and silk rose rapidly from 1842 to 1845; in 1846, there was a manifest decline. The diminution in the supply of the raw materials in 1846, implies some depression of the commerce and great manufactures of the country. Expenditure and employment on the railways increased rapidly in 1846. The Chancellor of the Exchequer stated on November 26, 1847, in introducing the Bill for regulating Railway Companies, that in the 5 years 1842–6, the capital authorized to be raised was 6, 4½, 18, 59, and

* Mr. Cotton, however, says, in his evidence, that it was late in 1846 that the Directors of the Bank of England became acquainted with the real deficiency of the harvest and the failure of the potato crop. He mentions the end of October.—*Committee of House of Commons on Commercial Distress*, 1848. Q. 3970, 3971.

124 million *l.* The amount expended in the 5 years was nearly 3, 4½, 6, 14, 36 million *l.*! The amount expended in the latter half of the year 1846 was 27 million *l.* About one-fifth was expended on the land and on Parliamentary expenses; the remaining four-fifths were outlay on skill, labour, and materials; and not only afforded employment to great numbers of labourers, but stimulated the labour market.* It will be recollected, that the railway *speculation* attained its maximum in the quarter ending September, 1845; when, according to the moderate estimate of Mr. Danson, 500 million *l.* of stock, scrip, or letters of allotment were on sale in the market. The Bank rate of interest, which for some years had not been less than 4 per cent., was reduced to 2½ per cent. on the 7th of September, 1844;† at which it remained until October 16, 1845, when it was advanced to 3 per cent.; on November 6, it was raised to 3½ per cent.; and about this time the railway speculation epidemic was at its crisis, shareholders rushed in panic into the market, and shares fell rapidly. The gambling speculators were driven from the share markets opened in every large town in the kingdom. The current rate of interest out of doors rose to 5 per cent. by the end of February, 1846, when the deposits on many of the projected railways were paid; the current rate gradually fell from March to September, when it scarcely exceeded the Bank rate, restored to 3 per cent. in August, 1846. The Bank circulation was 22½ million *l.*, the bullion 15$\frac{6}{10}$ million *l.* on August 9, 1845; on February 7, 1846, the circulation fell to 21$\frac{4}{10}$ million *l.* the bullion to 13$\frac{3}{10}$ million *l.*; but was again 21$\frac{3}{10}$ million *l.*, and 15$\frac{9}{10}$ million *l.* on August 8, 1846. The fluctuation in the circulation only ranged from 22$\frac{5}{10}$ million *l.* to 20$\frac{2}{10}$ million *l.* in the year 1846; and the bullion in the Bank, which was 13$\frac{1}{10}$ million *l.* on January 17, 1846, never fell lower; it was 15 million *l.* on December 26, 1846. The deposits, however, ranged from 25 to 13 million *l.*; the securities from 39 to 28 million *l.* The "rest" was 3$\frac{3}{10}$ million *l.*; or at the lowest on January 3, and 3$\frac{4}{10}$ million *l.* on December 26: it was greatest on October 3, or 3$\frac{9}{10}$ million *l.* before the dividends were paid. The gold and silver coin in the *Banking Department* fluctuated from 401 thousand *l.* to 761 thousand *l.*; it was 606 thousand *l.* on the week ending January 3, and 625 thousand *l.* on the week ending December 26, 1846. The notes on the same weeks were 6$\frac{4}{10}$ million *l.*, and 8$\frac{8}{10}$ million *l.*; in September they had been 9$\frac{8}{10}$ million *l.*, in October 6$\frac{9}{10}$ million *l.*; the dividends having been paid in the interval.‡ The Three per Cent. Consols, which were on an average about 95⅜, were at 97⅝ in February, and 94 in November, 1846. The witnesses examined by the Commons' Committee on Commercial Distress, agree in

* According to a recent return in the Appendix (D) to the Lords' Committee on Commercial Distress, the amount actually raised for railways prior to December 31, 1843, was 65,639,347*l.*; the amounts actually raised in the 4 years 1844-7 were 5,729,138*l.*, 16,457,094*l.*, 38.678,680*l.*, 43,557,974*l.* The total amount raised was 170 million *l.*: 130 million *l.* by shares, 40 million *l.* by loans. 3665 miles of railway were opened for traffic.

† Minutes of Evidence taken before the Committee of House of Commons on Commercial Distress, printed June 9, 1848. Evidence of James Morris, Esq., Governor, and H. J. Prescott, Esq., Deputy Governor of the Bank of England, Questions 3005, 2641.

‡ Revenue Returns, and Appendix to Reports on Commercial Distress.

stating that the general trade of the country appeared to be active in 1846; and little suspicion of its soundness was then entertained. Mr. Gardner, of Manchester, observed, that in "the early part of 1846 we appeared to "be at the height of our apparent prosperity:" and this will apply, allowing for difference of degree, as a general description to the whole kingdom. He added, "The commercial difficulty began, I think, about the middle of 1846;" which was also true out of Manchester. But I will give a brief summary of the evidence of all the English witnesses examined on this subject;* as it illustrates very remarkably the influence of "prosperity" on the marriages of the country:—

4. Mr. *A. Hodgson*, Liverpool, one of the confidential directors of the Bank of Liverpool, stated, that at the commencement of the year 1847, there was nothing that had excited any particular attention as to the state of trade at Liverpool.

651. Mr. *C. Turner*, a merchant of Liverpool:—"Events have proved that the trade, neither in Liverpool nor London, as regards the East India trade, was in a wholesome condition at all; we were very much deceived as to the state of trade. There is no doubt that in the East India trade there was a very great deal of overtrading in the beginning of 1847.

1259. Mr. *Muntz* states that the first difficulties were felt in Birmingham about April, 1846.

1585-1590. Mr. *Gurney* considered that trade at the commencement of 1847 was in a somewhat unnatural excitement. "I think things were going on a little too fast to be quite wholesome." This was at the close of 1846 and the first few months of 1847. The pressure came in the beginning of April, 1847.

1937-1939. Mr. *Horsley Palmer* thought that trade at the commencement of 1847 was in a very good state, a wholesome state.

2246. Mr. *Bevan*. At the end of 1846 and the beginning of 1847, trade was generally considered to be in a fair state; of course there had been a great deal of money absorbed by the railways at that time.

2450. Mr. *Joshua Bates*, a partner in the house of Baring, when asked what he considered the state of trade was in 1846, replied—"The state of trade generally was very prosperous; very active; everything was selling, and merchants were making good profits."

4578-4579. Mr. *Joseph Pease*, of Darlington, in Durham, says—"The year 1846 might be termed a year of about average employment in our district; every one seemed pretty well off, but the rate of profit was acknowledged low." * * "As regards particular interests, there appeared to be an excess of investments, but as respects the ordinary current business of the country in staple manufactures, its mining and its agriculture, things seemed to be in a wholesome state."

4861-4876. Mr. *R. Gardner*, of Manchester, stated to the Committee that the distress in Manchester exceeded anything he had ever witnessed before. * * * It has been most intense upon the poor, the working classes; but there has been a great destruction of capital. The distress commenced in the latter part of 1846; in fact it was coming on during the whole of 1846, but the severe distress began early in 1847. The commercial difficulty began, I think, about the middle of 1846. A good deal of business was done in 1846, but trade was not in a wholesome state; it appeared to flourish by the great abundance of money, and the great facility in getting long paper discounted. * * * I think in *the early part of* 1846 *we were at about the height of our apparent prosperity.* * * In the manufacturing districts there was a greater

* The extracts are from the evidence taken by the Committee of the House of Commons on Commercial Distress, 1848, P. Paper, No. 395. The principal witnesses examined by this Committee also gave evidence before the Committee of the House of Lords. Papers brought from the Lords, July 28, 1848, No. 565.

supply of goods than was justified by the demand. Immediately *after the China treaty,* so great a prospect was held out to the country of a great extension of our commerce with China, *that there were many large mills built with a view to that trade exclusively,* in order to manufacture that class of cloth which is principally taken for the China market. * * This trade turned out most ruinous; the losses averaged from 10 to 60 or 70 per cent.

5108. Mr. *S. Jones Loyd.* The general impression with regard to the state of trade in 1846, was that it was in a sound and satisfactory state; at the same time, among reflecting persons, there was an impression that the railroad speculation had been carried to a very undue extent, and that some serious consequences must therefore ensue; and there was also a feeling that the long-continued influx of the precious metals must sooner or later, and probably at no distant period, be followed by a corresponding action in the opposite direction; under this impression the deficiency of the harvest, when it was ascertained, became a subject of serious consideration.

5303. Mr. *Tooke.* The state of trade in the beginning of 1846 was very quiet and uniform; the markets for produce and the rate of consumption were fully up to the scale to which they had been extended in former years; there had been some temporary pressure on the money market connected with the payment of the railway deposits into the Bank, but that did not seem to extend itself so as to produce any material impression upon the trade of the country. Towards the autumn, when the failure of the potato crop was ascertained, and the consequent necessity contemplated for a very large importation, which would entail a drain of bullion on the Bank, considerable uneasiness began to be felt, and the very great extent to which the railway expenditure was proceeding seemed calculated to add to the feeling of uneasiness which then prevailed; at the same time there seemed to be no very sensible impression from those circumstances on the state of the money market. Towards the close of 1846 it was a state of some degree of apprehension, but not of actual pressure or inconvenience of any kind.

The political events of the year 1846 were important. In November and December, 1845, the administration of Sir Robert Peel was dissolved and reconstructed; Lord John Russell having failed in his attempts to form a ministry, Sir Robert Peel met Parliament in January, 1846, with all his colleagues, except Lord Stanley. On the 27th of January the Prime Minister developed his scheme of policy; involving the removal of all prohibitory, and the relaxation of protective, duties. The third reading of the Corn Bill was moved on May 11 by Sir James Graham in the House of Commons, and carried on the 16th by a majority of 327 to 229. The Corn Bill passed the House of Lords on June 26, and came immediately into operation. The Customs Bill, establishing the new tariff, passed in the same month. The Chancellor of the Exchequer, in making, on May 29, his financial statement for the year, said that the *actual* receipt of revenue amounted to 52 million *l.*, the *actual* expenditure to 49½ million *l.* The ordinary gross revenues of the year 1846, ending January 7, 1847, were 57334867*l.*; the expenditure was 55916416*l.* There was consequently a surplus of 1418451*l.*, besides a balance of about 1445000*l.* in the hands of the collectors both on January 5, 1846, and January 5, 1847. During the year the wars of France in Algiers, of Russia in the Caucasus, went on. An insurrection broke out in Silesia on February 22; the Austrian troops were driven from Cracow; the peasants, faithful to Austria, massacred upwards of 200 of their nobles; Cracow was taken, and the insurgents laid down their arms on March 5. The United States in May declared war against Mexico; intelligence arrived of the fighting in

the Rio de la Plata, where the combined English and French fleet had attacked Rosas on November 20, 1845. In Portugal an insurrection broke out on May 10; the Cabral, Palmella, and Saldanha ministries succeeded each other, and civil war raged through the year 1846. The insurgents in Geneva proclaimed a provisional government. Gregory XVI. died on June 1 at Rome. Cardinal Mastei, by birth a Roman noble, was elected pope on June 16. An amnesty and a new Roman tariff were proclaimed. The Sikhs had invaded India; on March 24 intelligence of the brilliant victory of Aliwal was brought by the overland mail; on the 31st, of the victory of Sobraon; on April 19, of the entry of the British army into Lahore; and thus were obliterated the last traces of the impression left by the disasters of Affghanistan. On May 19 despatches were received, announcing the capture of Heki's fortress, and the dispersion of the rebels in New Zealand. Outrages prevailed at the commencement of the year in Ireland; and Lord St. Germans introduced a Bill in the House of Lords for the "Protection of Life in Ireland." The Bill was introduced in the House of Commons by Sir James Graham on March 30; Sir W. Somerville moved a direct negative, seconded by Mr. Smith O'Brien; but the first reading was carried by a majority of 147 to 108. On June 26, at the second reading, the Bill was rejected by a majority of 292 to 219 against the Government. Intelligence of the amicable settlement of the Oregon question arrived, and was communicated to Parliament on June 29, when the intended resignation of the Government was announced.

Lord John Russell formed an administration, and assumed the seals of office on July 6; on July 20 he brought forward a measure for a permanent adjustment of the Sugar Question, substituting, for a prohibitory duty of 63*s.* and a protecting duty of 23*s.* 4*d.* in favour of the West India body, a duty of 21*s.* per cwt. upon all foreign Muscovado sugar, to fall ultimately to 14*s.* in 1851. The Bill founded on these proposals passed during the session. The new Government proposed the continuance of the Irish Arms Bill, which was read a second time against considerable opposition, but was withdrawn on August 17. The restriction on the possession of arms, which had existed in Ireland for 50 years, was thus removed. Lord John Russell now proposed a plan for meeting the existing and impending scarcity in Ireland, by employing the people upon Public Works. The proposed union of the Sees of St. Asaph and Bangor, Flogging in the Army, the Andover Poor Law Inquiry, and the Local Courts Bill, also occupied the attention of Parliament, which was prorogued on August 28. The Spanish marriages were heard of shortly afterwards, and, on October the 10th, the marriages between Queen Isabella and Don Francisco, the Infanta and the Duke of Montpensier, were celebrated. In November the annexation of Cracow to Austria was proclaimed: the treaty guaranteeing its independence was declared to be suppressed by three of the Powers who were parties to the Treaty of Vienna. In May, Prince Louis Napoleon escaped from Ham. Two attempts were made in the year to assassinate Louis Philippe, on April 16 and July 29. The Emperor of Russia modified his tariff: by the new tariff of the United States, which passed in July, and was to come into operation on December 1, the duties on iron in various stages of manufacture, on coal, cable, salt, cloths, glass, and other articles, were reduced from rates of duty ranging at 40 and 168 per cent. to 32 and 25 per cent. In

October large sums of money were voted by the baronies in Ireland for public works. In Mayo, worth 293000*l.* in annual value, 403466*l.*, were voted. In December, nearly half a million of labourers were employed on the works. "In the midst of the starvation," it stands reported, "a rage for fire-arms has arisen; to so great an extent, that "the gun trade at Birmingham has experienced a great revival, and the "old store-shops have been cleared of their stock. * * Auctioneers, "with carts laden with Birmingham arms, attend almost every fair or "market in the county of Cavan and the adjoining counties. * * The "peasantry are armed or arming. At night, volleys of musketry are "heard, and groups of peasants are seen practising at a mark. * * The "arms are [often] paid for in the silver just delivered by the Govern-"ment officers superintending the public works." While these Irish *ateliers nationaux*, established with the most humane intentions, ended in demoralization, great numbers of the poor famished population sought the shores of England at the close of the year, and in the centres of large towns aggravated, if they did not introduce, the dysenteries, diarrhœas, and fevers.

It does not lie within the scope of this Report to discuss the cause either of the prosperity of the years preceding 1846, or of the adversity that followed. I have endeavoured to state the facts hastily in their natural connexion, in order to show how exactly the marriage returns measure the "views which the people take of their prospects in the world." It would not be difficult to prove that the returns furnish data for a more satisfactory explanation of the phenomena in the crises through which the country passes periodically, than many of the theories afloat. I have before referred to the fluctuations in the marriages of Birmingham; and have shown how they have been affected by the speculations of the previous and the present century. The evidence before the Committee on Commercial Distress gives this inquiry a new interest; and I shall again advert to it as a remarkable illustration of the principles established by the facts in the Eighth Report.

A lamp-manufacturer, a brass-founder, a member of the Currency Reform Association, and the witness selected from Birmingham, was examined before the Committee on February 18, 1848. He was asked (Q. 1044) what he "considered the present state of Birming-"ham to be?" "I never knew the trade of Birmingham in so "depressed a condition as it is now; all trades are bad at Birmingham; "the East India trade, the West India trade, the Canada trade, and "the Home trade; with one exception, and that is in the agricultural "districts, there is still some business; it is the only exception to the "universal depression, and I might say the almost cessation of business." "(1049.) "The amount of wages I pay is diminished more than "two-thirds; and I believe that that diminution is about the average of "the diminution in Birmingham." Mr. Muntz, in his more judicious and measured evidence, said about the same time, (February 22, question 1256), "Trade is in a very depressed state in Birmingham; as far as "I can judge, from what I have ascertained from others in Birmingham "there are from 5000 to 6000 people entirely out of employment, and "the remaining number, or a very large majority, are working two or "three days a week."

The marriage returns express this state of depression: in the first

quarter of 1848 the marriages in Birmingham were only 278; in the first three months of 1846 they had been 373. (*g*.)

Birmingham has increased rapidly within the last 94 years. The marriages in the church of St. Martin and St. Philip were 155 in the year 1754, and 567 in 1800. The marriages in the parish churches of Aston, Deritend with Bordesley, Edgbaston, St. James (Aston), St. Martin and St. Philip, were 683 in 1801, and 1571 in 1830. The population of the Birmingham district was 60822 in 1801 and 138215 in 1841.

During the period there have been several violent fluctuations in the marriages. At the close of the American war (peace in 1783), the marriages in the 5 years 1780–1784 were 309, 382, 423, 520, 591. In the 6 years 1785–90 there was as great a fluctuation, connected, as was shown in the last Report, with a speculation in buckles. In the 6 years 1801–6, intersected by the famine of 1801, and the peace of Amiens (1802), the marriages fluctuated enormously; the numbers were 683, 1177, 1115, 959, 933, 889. In 1812–17 the marriages were 1011, 1021, 1110, 1331, 1186, 1035. In 1820–6, there was a great fluctuation; again in 1832–7 the marriages fluctuated. The fluctuation has generally extended over 6 years, has commonly followed a similar course, and has almost invariably attended speculations in trade (*h*) [see p. 14.], of which that of 1821–6, described with a sort of graphic confusion by the Birmingham witness, may be taken as a specimen.

(1149.) "I take it that all honest, industrious, able-bodied men were "fully employed [in 1824 and 1825]; there was a good supply of "money; then we came to 1826, when there was a collapse and a "scarcity of money, and all men were thrown out of employment. I "would mention another thing, which is, that much has been said of "over-trading, if over-trading means producing more than is consumed; "in 1824 and 1825 all men were in full employment; every mill and every "manufactory, every bit of machinery, was in full employment, and all "goods were taken into consumption in those years; the retailers' shelves "were bare of goods,—that I ascertained from very extensive inquiry at "the time; they sold the goods faster than they could get them from the "manufacturers; their stocks diminished; but, in 1826, when all the "mills were at half-work, there was a glut of goods, and the shelves were "laden with them; the fact was, that the consumption was so far stopped, "that even the small quantity that was made could not be taken into "consumption; in 1824 and 1825 money was abundant; in 1826 "money was scarce. All the difference between prosperity and adversity "is made by the relative quantity of money." * * *

The witness, in 1848, is "decidedly of opinion that there has been no over-speculation in any article whatever," but that "the workmen have been employed in most valuable and useful speculations." It is evident

(*g*)

that, *mutatis mutandis*, the description of 1824–5, will apply to the "prosperity" of 1844–5, about which the witnesses have said little.

Looking at the marriage returns, we find that in Birmingham and Aston 2758 persons married in 1842, and 4330 persons in 1846. Now, if the annual marriage of 2758 persons would keep up the number of *families* existing in 1842, it is evident that the annual marriage of 4330 persons would in no very long period produce *three* families for every *two* families that inhabited the town in 1842. Demand, work, and wages increased perhaps as rapidly as the marriages from 1842 to 1846, when affairs began to pause, and in the beginning of 1848 the marriages and trade for a short time nearly stood still. The same thing happened in 1821–1826, in 1785–1790, and in the other crises (*h*). The facts, of course, admit of several explanations. One is suggested by the marriage returns. Birmingham is not a county town; but it lies between a great iron district, and a rich agricultural country, in nearly the centre of England, on the principal lines of road; it abounds in small capitalists, and the division of labour is carried to a great extent; it has been long renowned for its cheap manufactures in metal, used in clothing or furniture, with a vast number of which it supplies not only parts of this kingdom, but other countries. Its trade fluctuates with the foreign commerce of the country, and with the prosperity of the neighbouring agricultural and iron districts, which are supplied with foreign and other goods by the shopkeepers of this entrepôt. Now, the iron trade was remarkably active in 1845, 1846, and 1847; British iron in bar, which was 5*l.* a ton in 1843, rose in 1844, and was about 10*l.* in 1845, 1846, 1847; in 1848 "there were some failures in the iron trade." The iron works were animated by the demand of the British and foreign railways; and the fortunate speculators of 1845, all over the country, evidently purchased large quantities of the Birmingham manufactures for furniture and clothing. The "long bills," the competition of the Bank of England with the money-lenders, the low rate of discounts, the "opening of trade" in China,—enlarged credit, and stimulated the foreign trade. And because there was a demand for more than the usual quantity of goods, "the retailers' shelves were emptied;" all the workmen were fully employed, and worked over-time; the masters meanwhile realized liberal profits; the men's wages were raised, and boys got the

wages of men; for promotion among these *gardes mobiles* of industry is rapid in times of crisis. Youths married, and furnished houses or lodgings; the expenditure of families increased; employers enlarged their establishments, and young men opened new factories—for this extraordinary prosperity appeared at the time perpetual. Experience proves that it has but a limited term. The expenditure on the construction of railways cannot always go on at an accelerated rate. And viewed calmly at a distance, there appears no reason why all the world if they buy twice as many lamps, buttons, teapots, tea-trays, Britannia metal spoons, dolls' eyes,* brass rods, and fire-irons in any given three years, should do the same in the three years following; on the contrary, it is probable that the abundant stock of articles laid in, however perishable, will not be consumed immediately, and, if they are, that the means of purchase or the disposition will no longer be found in their original exuberance. Is it not quite possible, in fact, that Birmingham, at the same time that its permanent trade was extended, did part of the trade, anticipated the profits, and earned the wages of future years in the three years 1844, 1845, 1846? Had, however, the income of Birmingham increased in the prosperous years as fast as the marriages, the surplus saved might have more than supplied the deficiencies of 1848. Assume, for instance, that the income, like the marriages of the people of Birmingham in 1844, was the average, and 4 million *l.*; † then if it increased at the same rate as the marriages, it would be 5017000*l.* in 1847; 5179000*l.* in 1846; and 4617000*l.* in 1845. The excess in the three years laid by would, without reckoning interest, be 2813000*l.* Take any amount of average income as the basis of the calculation; assume that in the prosperous years the income increases in any rational proportion, that only a part of it is saved, and this surplus accumulated will meet the wants of the years of depression. It is only when the wages and profits are expended as well as gained in prosperous years—and when contracts of expenditure for long terms are entered into, on the faith of a state of things being perpetual, which in Birmingham scarcely ever lasts more than five years—that the population is in the sixth year distressed, and panic-struck on the brink of ruin. It is in the situation of a crew on a six months' voyage that consumes its provisions in the first five months, and expiates the excesses of its former by the sharp misery of its latter days; while the leaders of the riotous livers on board repudiate all blame and declaim plausibly against the owners for not supplying their vessel with more canvas.

The population of Birmingham and Aston together, increased from 76132 in 1801, to 189192 in 1841 (*i*, *j*). The births must have increased rapidly. The industry, energy, and skill of the inhabitants of Birmingham have been such that it is believed their income has increased faster than their numbers. Not satisfied with this progress, the witness from Birmingham examined before the Committee on Commercial Distress,

---

* Mr. Osler, a manufacturer of Birmingham, stated before a Committee of the House of Commons, in 1824, that he had received a single order for 500*l.* worth of dolls' eyes.—*Report on Artisans and Machinery*, p. 314. M'Culloch, Statistics of the British Empire, vol. i. pp. 722–728, 3rd ed., has a tolerably full account of the trades of Birmingham.

† The annual value of the houses in Birmingham was assessed at 667971*l.* in 1842–3 under the Income Tax.

after declaring that, in the years 1824 and 1825, there was not an "able-bodied man in England out of employment," goes on to say "*all we want is to go back to* 1825 (Q. 1146);" that is, not to remain stationary at the point—for the business and population of Birmingham have increased so as to double in 30 years—but to go on multiplying marriages, boys, girls, buttons, the thousand useful things which ingenuity manufactures in the "toy-shop of Europe,"—at such a rate as to double production every *five* or *ten* years!—Perhaps it is as well as it is, both for Birmingham and the rest of the world (*k*, *l*).

It never happens that there is any Parliamentary inquiry into the prosperity of the country. Nor is this surprising; for success is satisfied with itself, while misery calls aloud for inquiry into its causes; which it always looks for abroad. From its very nature, distress has a thousand solutions; it is preceded by many changes, surrounded by many circumstances, with any of which it may be connected, and by some of which it is caused. Without going into details—or pretending that it admits at present of demonstration—I have noticed one solution of the problem. The "Currency Association of Birmingham," who have opportunities of studying the matter on the spot, offer a solution of the question much simpler and more general. Their witness, in answer to the inquiry, "What "do you consider to be the causes of the commercial distress?" replied —"I myself attribute the distress wholly and entirely to the [Currency] "Bills of 1819 and 1844; I would qualify that by saying, that from "the passing of those bills, there have been accidental circumstances "giving peculiar features to the distress; and it has generally been the "custom to say that those circumstances were the cause of the distress." Without discussing the great question of the currency, or stopping to

inquire how Mr. Salt's solution applies to the crises of the 18th century —or the great crises occurring in the years of inconvertible paper—it appears anything but unsound advice to recommend the people of Birmingham in the periods of prosperity to come, (which, I hope, are not far distant—for they began to marry again in the spring of 1848,) to deposit a part of their increased profits and wages in security for at least six years—at the end of which time it is probable they will find it a convenient resource to fall back upon—until prosperity returns. And should the notes "value-one-pound" ever supersede the sovereign—or the antiquated "I-promise-to-pay," * it would still be prudent to follow the same course—until they find by experience that the tempests of the trading atmosphere are for ever stilled by the flights of a talismanic paper.

I have merely adduced Birmingham for the sake of simplifying the argument: but similar facts exist elsewhere, and the same principles apply to Manchester, Liverpool, Leeds—the whole kingdom. For these fluctuations—these periodical seasons of activity and repose—of success and misfortune—not only affect manufacturers and merchants, but agriculturists in their more placid pursuits :—

> Agricolas! quibus ipsa, procul discordibus armis,
> Fundit humo facilem victum justissima tellus;

who have also their "distresses" and "good times."

* Evidence before the Committee of House of Commons on Commercial Distress :—

1116.—*Sir Robert Peel.* Will you have the goodness to give us a draft of the bank-note you would permit to be issued?—*Mr. Salt.* I would have it in amount anything that might suit the national convenience; but instead of saying "I Promise to Pay," I would simply put, "Value One Pound," or whatever it might be.

It appears from all we have seen for a century that the tide of affairs has flowed in waves; any extraordinary advance has always been followed by a reflux; in vain is it bid "be still," for it is one of the conditions and perhaps means, if not of the existence, at least of the progress of society; which, amidst all its perturbations, moves steadily up and down on the shores of time—under the dominion of a power that makes nations advance or recede, and under laws which can only be discovered by long, accurate, analysed observation. As statistical science and education advance, the severity of seasons of distress—whose general course can be calculated—will be diminished by mutual aid—and provision will be made in prosperity against their recurrence; as the losses of shipwreck, fire, and life to society are mitigated by the various kinds of insurance. Knowledge will banish panic and mitigate pain.

The following Tables exhibit other facts of interest connected with the marriage returns (*m*, *n*, *o*).

* Of the 8564 marriages in 1844, 2280 were in Roman Catholic chapels; and 6284 in the chapels of other denominations.

† Of the 9997 marriages in 1845, 2816 were in Roman Catholic chapels; and 7181 in the chapels of other denominations.

‡ Of the 10696 marriages in 1846, 3627 were in Roman Catholic chapels; and 7069 in the chapels of other denominations.

At pages 60–1 of the Abstracts will be found an interesting series of tables, showing the ages at which 24356 men married 24356 women; distinguishing the ages of bachelors and spinsters, widows and widowers.

Births.—The numbers of births registered in each of the five years 1842–6 were 517739, 527325, 540763, 543521, 572625. The births in 1846 exceed any number ever before registered. The increase is diffused over all the divisions, except the eastern, and is partly accounted for by the previous excesses in the marriages. I defer the discussion of this subject for a short time.

Of the 572625 children born alive, 38529, or 19735 boys, and 18794 girls were, it appears, born out of wedlock. The proportion of children

born out of wedlock was 6·7 per cent. It was 7·0 in 1845, and 6·7 in 1842.

In 1845 and 1846 the number of cases of twins, of triple and of quadruple births, was distinguished. In 1846 the results found were that of 528690 married women 523313 gave birth to one living child, 5349 to twins, 27 to triplets, while one woman had 4 living children. Of 38230 women who bore children out of wedlock, each of 37934 bore a single living child, 293 had twins, 3 had triplets.

The proportions were—of married women who bore children 1 in 588690 had 4 children; 1 in 19581 had 3 children; 1 in 99 had twins; of unmarried women, 1 in 12743 women had 3 children, and 1 in 131 had twins.

Deaths.—The number of deaths registered in 1846 was 390315; which is a greater number by 40949 than was registered in 1845; and implies a higher rate of mortality than was observed in any one of the 8 previous years 1838–45. The winter was mild and the mortality was low in the winter quarter of 1846; the excess arose on the last half of the year 1846 (*p*). I shall extract the account of the changes in the mortality, and the prevailing diseases from the Quarterly Reports revised—which, though written hastily at the time, convey, I believe, a correct impression—so far as they go—of the health of the country; and may continue in some degree to promote the sanatory improvements contemplated by the recent Acts of the Legislature.

State of the Public Health in the Quarter ending March 31, 1846.

" The Quarterly Returns are obtained from 115 districts,* subdivided

* The districts comprise:—

The whole of London.

In the South Eastern Division.—Maidstone, Brighton, Isle of Wight, Portsea Island, Winchester, Windsor.

In the South Midland Division.—St. Albans, Wycombe, Oxford, Northampton, Bedford, Cambridge.

In the Eastern Division.—Colchester, Ipswich, Norwich, Yarmouth.

In the South Western Division.—Devizes, Dorchester, Exeter, St. Thomas, Plymouth, Redruth, Penzance, Bath.

In the Western Division.—Bristol, Clifton, Stroud, Cheltenham, Hereford, Shrewsbury, Worcester, Kidderminster, Dudley, Walsall, Wolverhampton, Wolstanton, Birmingham, Aston, Coventry.

In the North Midland Division.—Leicester, Lincoln, Nottingham, Basford, Derby.

In the North Western Division.—Stockport, Macclesfield, Great Boughton (including Chester), Liverpool, West Derby (adjoining Liverpool), Blackburn, Preston, Rochdale, Bury, Bolton, Wigan, Prescot, Chorlton, Manchester, Salford, Ashton.

"into 576 sub-districts. Thirty-four districts are placed under London, "and the remaining 81 districts comprised, with some agricultural dis- "tricts, the principal towns and cities of England. The population was "6579693 in 1841."

"43708 deaths were registered in the last winter quarter (ending March 31st). This number is less by 6166 than the number (49874) registered in the winter quarter of 1845. If the increase of the population (about 1·75 per cent. annually) be taken into account, the mortality will also be found to have been less in the last winter than in any of the 8 previous winters. This marked diminution of the mortality occurred in more than two-thirds of the districts from which returns are procured; but is most obvious in London, in the western and north-western divisions. In the districts of the northern division, alone, of England, the mortality was considerably higher than in the winters of 1844 and 1845; and this is referred by the Registrars to epidemics of scarlatina in Sunderland, Tynemouth, and Carlisle.

"The annexed Table shows that the mortality was considerably above the average in the winter quarters (ending March 31) of 1838, 1840, 1841, and 1845, and below the average in the winter quarters of 1839, 1842, 1843, 1844, and 1846 (*q*).

"Temperature, the command of food by the working classes, epidemics, and the general condition of the streets and dwellings, have all a certain effect on the rates of mortality; but there can be little doubt that the low mortality in the present Table is to be ascribed to the extraordinary mildness of the winter of 1846. The mean temperature at the Greenwich Observatory was nearly 5 degrees above the average of 25 years, 8 degrees above the average temperature of the winter of 1845. The mean temperature of the week ending February 14th was 36 degrees; of the week ending March 21st, 38 degrees; of all the other 11 weeks in the quarter the mean temperature was 40 degrees and upwards. The south-west winds prevailed; the fall of rain at Greenwich was nearly 6 inches; 10·26 inches of rain fell at Helston, 13·35 inches at Truro, only 1·92 inches at Newcastle-on-Tyne.

In the York Division.—Sheffield, Huddersfield, Halifax, Bradford, Leeds, Hunslet, Hull, York.

In the Northern Division.—Sunderland, Gateshead, Tynemouth, Newcastle-on-Tyne, Carlisle, Cockermouth, Kendal.

In the Welsh Division.—Abergavenny, Pontypool, Merthyr Tydfil, Newtown, Wrexham, Holywell, Anglesey.

"In London, the deaths by small-pox were 77, and ranged from 3 to 9 weekly. In 1845, 481 persons died of small-pox during the same quarter. Measles was the prevailing epidemic at the beginning; hooping-cough at the end of the quarter. Typhus, though more prevalent than in the winters of 1840, 1841, 1842, and 1845, was much less fatal than in the winters of 1839, and 1843.

"The effects of temperature in London are shown by the annexed Tables (*r*, *s*).

(*r*) METEOROLOGY OF 1844, 1845, & 1846.

State of the Public Health in the Quarter ending June 30, 1846.

"43582deaths were registered in the spring quarter ending June 30th; a number greater by 2853 than were registered in the corresponding quarter of 1845, and 4731 more than in the June quarter of 1844. The mortality was little lower than in the preceding mild winter quarter, when the deaths were nearly 5000 less than the average. The districts of Lancashire and Yorkshire were the most unhealthy. The subjoined Table shows that, taking the whole of the 115 districts, the mortality was above the average in the spring quarters (ending June 30th) of 1839, 1840, 1845; and below the average in the spring quarters of 1841, 1842, 1843, 1844, 1845. There was an evident tendency to decline through the 7 years; but in 1846, this tendency was counteracted, and the deaths exceeded the calculated average (*t*).

"The inadequate supply of water by companies, the imperfect sewerage in towns, the open drains and ditches, and the general neglect of cleanliness, leave everywhere great quantities of organic matter to decay and putrefy in the midst of crowded populations. In such circumstances, the mortality, like putrefaction, is always increased when the temperature is high; and epidemics of diarrhœa, dysentery, and cholera prevail. Many thousands of the people of England were carried off in the last quarter by these diseases and others of the zymotic class.

"The deaths in the quarter were 43582. If the mortality had not been higher in the towns than in the poor country districts where the air is purer, the deaths in the quarter would not have exceeded 33000.

"In London the deaths at the close of June from diarrhœa, dysentery, and common cholera rose to 40 weekly, and have since increased. Nor is that to be wondered at. Notwithstanding the improvements effected when cholera was last epidemic; the foul untrapped sewers and the ground areas of the best streets emit noisome smells and volatile poisons, which are as fatal as arsenic to a certain number of persons. London is surrounded, too, by stagnant, putrid ditches, as some cities are by walls. It would be well not to wait carelessly until cholera reaches the country, but to 'look before,' remove these nuisances, and purify the reeking atmosphere, which gives the disease breath, life, and being. These remarks apply with tenfold force to Liverpool, Sheffield, and the towns of the north, where the epidemics in the last quarter were more fatal than they had ever been before, and diseases were in proportion to the population at least one-third part more numerous than in London.

"The mean temperature at Greenwich of the 13 weeks ending June 27th is 55°·2; which is 2°·3 above the average of 25 years, and 3°·3 above the average of the corresponding quarter of 1845. The temperature is very little above the temperature of the same season in 1844, when the wheat crop was so abundant; 5½ inches of rain have, however, fallen in the present quarter, and the winter of 1846 was of extraordinary mildness, while the winter of 1844 was of more than the average severity. The highest point of the thermometer in the shade at Greenwich was 87°·0 on June 20; the lowest 33°·3; the extreme range was therefore 53°·7. The highest point in the sun was 116°·5, the lowest on the grass 21°·0; to these extremes, differing 95°·5, vegetation was exposed. The temperature of the Thames was 59°·4 in the day, 58°·3 in the night. The water was on the average 3°·7 warmer

(*t*) TABLE showing the Mortality in 115 Districts, from 1839 to 1846.

	1839	1840	1841	1842	1843	1844	1845	1846

than the air. The dew point was 48°·3. The air wanted 6°·8 of saturation, and was much drier than the spring of 1845; but not so dry as the same season of 1844. The sky was more clouded than in 1844; and there was less wind. In the spring quarter of 1844, the mean weekly amount of horizontal movement of the air was 948 miles; in the same quarter of 1846, it was only 655 miles. The barometer was 29·919 inches in 1844, and 29·740 inches in 1846 (*u*, *v*).

Public Health in the Quarter ending September 30, 1846.

"51235 deaths were registered in he summer quarter ending September 30; a number greater by 15227 than the deaths (36008) in the corresponding quarter of last year. In the mild winter quarter of this year ending March, 1846, the deaths were nearly 5000 below the average; in the spring quarter (June), the mortality was slightly above the average; intestinal complaints then arose, and, becoming epidemic, have been the principal causes of the immense loss of life on record.

"The relative salubrity of the hottest season of the seven years, 1839—46, is displayed in the annexed tables, (*w*, p. 25, and *x*, *y*, p. 29).

"Respecting the proximate causes of the mortality in London, the weekly tables furnish full information. The deaths in the summer quarter were 10842 in 1845, and 12409 in 1846. Of the excess of 1567 deaths, 1303 were from diarrhœa, cholera, and dysentery, which proved fatal respectively to 1549, 197, and 75 persons. The mortality by intemperance, delirium tremens, jaundice, liver diseases, and rheum-

atism, was also greater than usual. Inflammatory diseases of the lungs and influenza lay in abeyance, as if the morbid force had directed and expended itself on the digestive organs. No death from hydrophobia appears to have been registered in London during the last three summers. The five weeks from July 11 to August 15 were the unhealthiest; 1100 deaths, exclusive of those by violence, were registered in the first week of August: the numbers then fell off, and only amounted to 783 on the last week of the thirteen. Upon comparing the facts in the table, it will be seen that young children were the chief sufferers. Indeed the form of the disease, which has long been prevalent in the cities of America, is designated in their bills of mortality *cholera infantum*. The disease also proved fatal to many old people, and some adults died of attacks which could not in their symptoms be distinguished from Asiatic cholera. It was, however, quite evident from the first that the EPIDEMIC had not the characters of that malady which broke out here in the winter of 1832, but was closely allied to the cholera described by Sydenham, which he says lasted a month, and—'*eam anni partem quæ æstatem fugientem atque autumnum imminentem* '*complectitur, (unice ac eadem prorsus fide, qua veris primordia hirun-* '*dines, aut insequentis tempestatis fervorem cuculus,) amare consuevit.*'*

"While the deaths in London were little more than 14 per cent. above the return of 1845, the deaths rose from 25166 to 38826—or about 52 per cent. after a correction for increase of population—in the towns and other districts of the kingdom included in the return. In some densely-peopled towns the mortality was doubled. The deaths in the corresponding summer quarters of the past and present year were in Maidstone, 124 and 239; Brighton, 219 and 372; Portsea Island, 239 and 433; Winchester, 89 and 141; Oxford, 89 and 194; Northampton, 182 and 221; Bedford, 182 and 254; Ipswich 119 and 240; Norwich, 306 and 451; Plymouth, 191 and 279; Clifton, 323 and 436; Worcester, 106 and 173; Dudley, 457 and 744; Walsall, 158 and 288; Wolverhampton, 439 and 687; Wolstanton and Burslem, 164 and 315; Coventry, 188 and 300; Nottingham, 285 and 469; Lincoln, 154 and 246. No such mortality has been witnessed in Birmingham for many years; the deaths in 1845 were 694, in 1846 they amounted to 1627. In Liverpool and the adjacent district of West Derby the deaths in the summer

* Sydenham Opera. Obs. Med. Anni 1669. He also describes the severer epidemic cholera of 1676, "Insueto tempestatis calore evectus."

quarters of 1845 and 1846 were 2595 and 4090; in Manchester and the contiguous districts of Salford and Chorlton 2411 persons died in 1845, and 4248 in 1846. Stockport, Macclesfield, Chester, Blackburn, Preston, Bury, Bolton, Wigan, Prescot, Ashton, and other districts of Cheshire and Lancashire, suffered to an equal or a greater extent. The districts of Yorkshire did not escape; 1039 persons died in Sheffield, where only 445 died in the summer quarter of 1845, and the mortality in any preceding summer since 1838 had never exceeded 647. Huddersfield, Leeds, Hull, and York, suffered severely. In Sunderland, Gateshead, Tynemouth, and Newcastle-on-Tyne, 1172 deaths were recorded in the summer quarter of 1845, and 2313 in the corresponding quarter of 1846.

"Upon the other hand, the mortality of the quarter was below the average in Pontypool and Newtown, but slightly above the average in the other districts of Wales; and generally the country and southern districts suffered comparatively little.

"In the above summary the mortality of the summer quarter of 1846 is compared with the mortality of the same districts in the corresponding season of the previous year. The *proportion* which the *deaths* bear to *the population* shows the *relative mortality in different districts*, and is still more important. Thus at the last census the population of Anglesea was 38105, the deaths in the same quarter were 160; the population of Gateshead was 38747, the deaths in the same quarter 473; the population of Abergavenny and Newtown 77000, the deaths 378; the population of Sheffield 85000, the deaths 1039. Again, the population of the seven Welsh districts was 273000, the deaths in the last quarter 1465; the population of Manchester and Salford 263000, the deaths 3149! The population of the six districts of the South Eastern division was 218000, the deaths in the last quarter (ending September 30), were 1458; the population of Liverpool was 223000, the deaths in the same quarter 2946!

"In the annual reports and quarterly returns the causes of these differences in the mortality of the several parts of the country and of the population have been discussed. The high mortality of towns has been traced to crowded lodgings—dirty dwellings—personal uncleanliness—the concentration of unhealthy emanations from narrow streets without fresh air, water, or sewers. The rapidity of decomposition, and the facility with which all kinds of animal matter become tainted and run into putrefaction, enable us to understand how, in a summer like the past, in which the temperature was unusually high, the diseases referable to an impure atmosphere should be so prevalent and fatal.

"The Seventh Annual Report, 8vo edition (pp. 330–338), contains some calculations which set in a striking light the extent to which human life and health have hitherto been sacrificed. The calculations have been made with care; they are based upon the returns of deaths for the seven years 1838–44, and the census taken in 1841, the middle of the period.* It appears—to give a few examples of the results—that the annual deaths in the town districts of Manchester to 1000 males living are 37, in the extra-metropolitan parts of Surrey 19 in 1000.

* The calculations referred to are in the Appendix to the present Report.

To take particular ages, the annual mortality of boys under five years of age is 48 in Surrey, 148 in Manchester, to 1000 living.

"Of men of the age of 35 and under 45, the annual mortality is 11 in Surrey, 21 in Manchester to 1000 living. The enormous difference will be rendered more obvious to some by the simple facts—

		Deaths registered in the 7 Years 1838-44.
"Population of the Town Sub-Districts of Manchester in 1841 . . .	163856	39922
"Population of the Extra-Metropolitan Districts of Surrey . . .	187868	23777
	Difference	16145

"The population of Surrey exceeded that of Manchester, yet in 7 years 16000 persons died in Manchester over and above the deaths in Surrey, the mortality in which from the poverty of the labourer, and slighter degrees of the influences so fatal in Manchester, is higher than it should be. There were 23523 children under 5 years of age in Surrey, and the deaths of children of that age were 7364; the children in Manchester were 21152, the deaths 20726! In the 7 years, 13362 children in Manchester alone fell a sacrifice to known causes, which it is believed may be removed to a great extent; and the victims in Liverpool were not less numerous. Other parts, and particularly the *towns* of England, are similarly afflicted.

"The returns of the past quarter prove that nothing effectual has been done to put a stop to the disease, suffering, and death, in which so many thousands perish. The improvements, chiefly of a showy, superficial, outside character, have not reached the homes and habits of the people. The house and the children of a labouring man can only be kept clean and healthy by the assiduous labour of a well-trained, industrious wife, as any one who has paid the least attention to the subject is aware. This is overlooked in Lancashire, where the woman is often engaged in labour from home. The consequence is that thousands, not only of the children, but of the men and women themselves, perish of the diseases formerly so fatal for the same reasons in barracks, camps, gaols, and ships.

"The supply of water, and the removal of refuse from the surface, or of matters in solution and suspension through the sewers, are 'simple engineering questions, the success of which,' in the words of Mr. Smith of Deanston, 'is certain, while the cost can be estimated on known data.' The wealthiest and most populous parish in the metropolis—Marylebone—is an example of the imperfect manner in which these questions are solved in the present state of the law. The parish, on an area of about 1490 acres, had 14169 inhabited houses, and 138164 inhabitants in 1841. The annual value of property rated for the relief of the poor in the same year was 815279*l.*—57*l.* to each house. Yet a considerable part of the parish is without sewers, or any direct open communications with the sewers. It is said, though the information on this head is imperfect, that half the houses in the parish have cesspools, many of which remain unemptied from year to year. The vestry, under the local Act,

is empowered 'to nominate persons to carry out the *dust, dirt, cinders*, or *ashes;*' yet no effectual arrangements are made for the removal of decaying animal and vegetable matters—the 'filth' and 'noxious matters' which are really prejudicial to health. The contracts only apply specifically to 'ashes' which are innoxious. 894 persons died in the parish last quarter. The condition of other parishes may be conjectured from this specimen.

"In the remarks of the registrars, attention is very properly called to the neglect of parents in procuring proper medical attendance for their children.

"The registrar of *Heaton Norris, Stockport*, says:—'Of the 120 persons, 53 were children of 1 year and under; and of these deaths of infants the causes were certified by a medical attendant in only 28 cases. It is to be feared that many at this age are lost for want of medical assistance, and care of the mother, who is soon obliged to leave her child in other hands, and go forth to engage in constant and unwholesome toil. The child sickens, and is soothed by opiates.'

"The registrar of *Hulme*, in *Chorlton District*, near *Manchester*, observes:—'When we take into consideration that the infants of the poor are, many of them, fed upon innutritious and improper food, and a large portion of them in this district are constantly drugged with narcotics, such as Godfrey's cordial, paregoric, and miscalled infants' preservatives, inducing a morbid and congested state of the *primæ viæ;* that they live in unhealthy localities, in ill or non-ventilated dwellings, surrounded by an atmosphere pregnant with noxious exhalations, we cease in some degree to be surprised (these remote and predisposing causes existing) that, when an epidemic affecting the abdominal viscera prevails, it should prove so extensively fatal, and more particularly when these poor infants, many of them, have not had the advantage of judicious medical treatment, consequently no chance of recovery. During the last quarter there have been registered very few deaths of children of the higher class of society caused by bowel complaints, they being in a great measure exempt from the predisposing causes before enumerated, and having had the advantage of proper medical assistance. The 298 deaths certified, include many that have been seen only once or twice by regular practitioners, having been previously attended by druggists. Deaths not certified, 88, include those where it has not been convenient to get a medical certificate, and those who have not had attendance during the latter weeks of their illness. Deaths, not certified, where there has been no proper medical aid, 93, include those that have been attended by druggists, or have had no medical assistance whatever.'"

"The registrar of *Deansgate, Manchester*, remarks:—'Of the 279 children, the deaths of only 126 were certified, so that 153 died without any proper medical assistance having been procured for them, and of the certified cases a large number were stated in the medical certificates to have been in a hopeless state, having been ill several days or weeks before medical assistance was sought. The chief cause of mortality has been diarrhœa, and this of a very controllable character when taken early. Here we have 153 children dying in one district alone, and in one quarter, without any reasonable attempt having been made to save them, and if the deferred cases were added, the number would probably not fall short of 200. It is difficult to think of this frightful waste of

life without feeling that all other circumstances affecting the mortality of large towns dwindle beside it into insignificance. It is indeed deeply to be deplored that no proper provision has hitherto been suggested, and carried out for the preservation of the children of the poor. In all Manchester there is but one children's dispensary, and this has but two medical officers. Such institutions should be numerous in large towns, and much good might be effected; but the unfortunate out-door occupation of the women, by causing the withholding of nature's nutriment from the children, is terribly destructive to the latter.'"

"How pitiful is the condition of many thousands of children born in this world! Here, in the most advanced nation of Europe—in one of the largest towns of England—in the midst of a population unmatched for its energy, industry, manufacturing skill—in Manchester, the centre of a victorious agitation for commercial freedom—aspiring to literary culture—where Percival wrote and Dalton lived—13362 children perished in seven years over and above the mortality natural to mankind. These 'little children,' brought up in unclean dwellings, and impure streets—were left alone long days by their mothers, to breathe the subtle, sickly vapours—soothed by opium, a more 'cursed' distillation than 'heb-

enon '—and when assailed by mortal diseases, their stomachs torn, their bodies convulsed, their brains bewildered, left to die without medical aid,—which like Hope should 'come to all,'—the skilled medical man never being called in at all, or only summoned to witness the death, and sanction the funeral!"

Public Health in the Quarter ending December 31, 1846.

"The time from harvest to Christmas, comprising the last three months of the year, has hitherto been distinguished only by an excess in the number of marriages. During the past quarter (ending December 31st), funerals have taken their place. 52905 deaths were registered; which is 7311 more than the corrected quarterly average of previous years, and 13727 more than were returned in the corresponding season of 1845 (*z*).

"The first quarter of 1846 was remarkably healthy. The winter was mild; the rate of mortality lower than in the corresponding quarters of eight previous years. The northern districts alone, Sunderland, Newcastle-on-Tyne, and Carlisle, for instance, were striking exceptions. In the second quarter (ending June 30th) the mortality was a little above the average; and the diseases began to be prevalent in June, which raised the mortality in the third quarter (ending September 30th) 9655 above the average of that season. There was an epidemic of diarrhœa, and what is called English cholera. In London 1100 deaths, exclusive of those by violence and cases of inquest, were registered in the first week of August; the epidemics declined, and the deaths fell to 783 in the last week of September. The deaths, which in the last week of November were 918, rose in the four following weeks of December to 1020, 1111, 1214, 1214, in London; and the quarterly returns indicate a still greater increase of mortality in the other towns of the kingdom.

"The deaths in 1846 were 25641 more in districts making the quarterly returns than in 1845;*** and nearly the whole of the excess in 1846 arose on the two last quarters of the year, from diseases of a totally different character. Thus in London 1821 deaths from diarrhœa, dysentery, and cholera, were registered in the September quarter, 389 in the December quarter; while 977 deaths from lung diseases (exclusive of consumption) were registered in the September, and 2628 in the

* The returns for the whole of England had not been received when this was written; the number of deaths in 1846, for the whole kingdom, was given by estimate, which is here omitted, as it was erroneous, for the reasons assigned, p. 36.

December quarter. Small-pox, measles, scarlatina, hooping-cough, croup, and thrush, which proved fatal to 1987 persons, chiefly children, in the December quarter, 1845, only destroyed 963 lives in the December quarter, 1846, when diarrhœa, dysentery, cholera, and influenza were unusually common, and typhus carried off 619 persons, of all ages. Bronchitis (in many cases a consequence of influenza), asthma, hernia, colic, or ileus, diseases of the stomach and liver, and rheumatism, were more than usually fatal. 397 persons (including suicides) died violent deaths—a number nearly 100 greater than died from the same causes in the December quarter of 1845. The deaths from cold and want were nearly twice as numerous as in previous years. A great increase in another very distressing class of cases will be observed. In the 13 weeks 163 mothers died in childbirth. Only 95 deaths were registered from the same cause in the corresponding quarter of 1845. It is to be regretted that steps are not taken in this country to educate nurses and midwives, on whose care and services the lives of women in childbirth often depend.

"The increased mortality in London gives but a faint notion of the mortality in the large towns of the country. The deaths in the December quarters of 1845 and 1846 were respectively 11695 and 13033 in the London districts; 27483 and 39872 in the other districts which made returns. The deaths in the December quarters of 1845 and 1846 were in Maidstone, 175 and 262; Brighton, 251 and 375; Winchester, 96 and 163; Oxford, 90 and 189; Bedford, 131 and 327; Colchester, 85 and 152; Ipswich, 145 and 212; Dorchester, 95 and 135; Exeter, 203 and 267; St. Thomas (surrounding Exeter), 183 and 276; Plymouth, 180 and 306; Portsea Island, 347 and only 380; Bristol, 363 and 471; Stroud, 171 and 227; Shrewsbury, 99 and 151; Dudley, 475 and 768; Walsall, 225 and 300; Wolverhampton, 464 and 630; Wolstanton and Burslem, 171 and 327; Birmingham and Aston, 1007 and 1787; Leicester, 354 and 460; Stockport, 437 and 793; Macclesfield, 293 and 425; Great Boughton (including Chester), 235 and 392; Blackburn, 435 and 853; Preston, 552 and 968; Bury, 439 and 717; Wigan, 402 and 675; Prescot, 290 and 510; Manchester, Salford, and Chorlton, 2555 and 4029; Ashton and Oldham, 1018 and 1485; Sheffield, 527 and 805; Huddersfield, 574 and 960; Leeds and Hunslett, 891 and 1389; Hull, 261 and 404; York, 231 and 342; Gateshead, 215 and 426; Tynemouth, 320 and 498; Newcastle-on-Tyne, 434 and 888; Carlisle, 183 and 327; Cockermouth, 173 and 262; Abergavenny, 241 and 332; Wrexham, 177 and 348; Holywell, 185 and 268. It will be observed, that the manufacturing parts—the iron, coal, pottery, cotton and woollen districts, and generally the counties north of Staffordshire, were most severely visited.

"Referring to the registrars' notes, the high mortality in the towns of the country is in many places ascribed to typhus. The diarrhœa of the summer quarter was succeeded by fever; generally 'of the form accompanied by considerable disorder of the digestive organs.' It was apparently the typhus characterized by ulcerations of the intestinal glands (dothinenteria) rather than typhus with petechiæ. The epidemic of diarrhœa continued in several towns; and scarlatina, the disease most fatal to children between five and ten years of age, and which tracks their path up to twenty, raged with great violence in several districts, but

chiefly in the northern counties. It was fatal to between 200 and 300 persons in Newcastle-upon-Tyne alone. Bronchitis and other inflammations or congestions of the chest were the immediate consequences of the cold weather, and the causes of many deaths, particularly amongst persons afflicted with asthma and heart disease.

"The mean temperature of the quarter at Greenwich was 44°2, which is 1°9 below the temperature of the corresponding quarter of 1845, and 1°3 below the average of the quarter for 25 years, but 1°8 above the temperature of the last quarter of 1844. The mean dew point was 41°. The rain was 8·16 inches. The horizontal movement of the wind, which was at the rate of 751 miles a week, in the summer, became 1003 miles a week. At the close of November the wind which had been s. and s.s w. went round to the N.N.W., and the mean temperature from 46° fell below the freezing point; the mean temperature of the week ending December 5th was 32°; the highest was 38°, the lowest 25°; the highest in the sun, 57°, the lowest on the grass, 10°. The next week the mean temperature rose a little, but fell on the week following to 30°: the lowest temperature of the atmosphere was 20°; of the grass on the ground 9°; of the water of the Thames, 33°. Upon the whole the weather in December 1846 was not so severe as the weather in December 1844; and in London the mortality of the quarter was not so great in 1846 as in 1844. The aggregate mortality in the December quarter 1844 was 43918; in the same quarter of 1846 it was 52905. It may therefore be concluded that though the cold was fatal to many lives in both years, it was not the chief cause of the excessive mortality in the last quarter of 1846.

"The registrar of St. George, Manchester, after stating that the great number of deaths in his district—406—may be partly accounted for by the prevalence of measles and typhus, goes on to say:—

"'The population of the district is to a great extent composed of the lower order of Irish, who live and lodge together in great numbers in the same house. In one part of the district, called 'Angel Meadow,' it is not uncommon to find 20 or 30 persons living in one house where there is not accommodation for one-third part of that number, especially if health is to be in the least considered. During the last 2 or 3 months large numbers of the poor from Ireland have crowded themselves in the district, droves of them rambling about the streets seeking lodgings, and no doubt being exposed to the severe and inclement weather. Many of the poor creatures have died from cold producing fever and other diseases. Owing to the great increase of mortality during the last few weeks, I instituted inquiries as to the length of time the deceased had been in England, and found in very many cases they had been only a few weeks. The poverty and destitution of the district at the present time is very great. The houses are badly ventilated, and the unhealthy odour arising from so many persons huddled together in a confined apartment must have a very injurious effect. It cannot be surprising that while such a state of things exists the mortality should be so great.'

"The same thing is noticed in Liverpool. The registrar of St. Thomas says:—'A considerable portion of the increase [of deaths] arises from the great influx of poor people from Ireland, most of whom are quite destitute when they arrive. Some have been only a few weeks, others a few days in the town previous to their death.'

"The population of the United Kingdom, which was about 28487000 in the middle of the year 1846, probably increased at the mean rate of 800 daily. The daily births exceed the deaths by 1056; and the surplus of 256 is the average number who leave the United Kingdom. The emigrants from England are constantly replaced by nearly an equal number of the natives of Scotland and of Ireland, who, it is estimated, amounted to upwards of 27000 a year in the 10 years 1831–41.* The sad condition and the habits of these poor Irish immigrants, have, no doubt, contributed to deteriorate the health of Liverpool, Glasgow, and Bristol, the ports through which they enter, as well as to raise the mortality of Manchester and other inland towns. They may also introduce fevers and other diseases into England. As the different families of men are of one kind and of one blood, they have diseases in common. Like living things, epidemics do not cease with the circumstances in which they are produced; they wander to other places and descend to remoter times. The plagues of the eastern empire,† and the 'black death,' depopulated the western world; the Egyptian ophthalmia blinded thousands in Europe; the *febris castrensis*—a typhus called *fièvre meningite catarrhale de congelation*, by Larrey—which broke out in the French army after their disastrous retreat from Moscow, became contagious, and committed terrible ravages among the peaceful citizens of Poland, Prussia, Saxony, Germany, and France;‡ the cholera epidemic, generated in the miserable population of Asia, on the banks of the Ganges, traversed England from Sunderland to London and the Land's End. If all nations, however remote, are liable to suffer from each other's maladies, and have, therefore, a direct interest in each other's well-being, the principle holds with tenfold force of the provinces of the same kingdom, and the inhabitants of the same cities. The unhealthy and miserable parts of the population, who are left with an imperfect claim to relief on the property of their native soil, exercise, in a variety of ways, a deleterious effect on the rest of the empire, both when they are suffered to feed at home in hovels on one kind of the lowest and most precarious subsistence—the failure of which entails starvation on men, women, and children, or lights up fever—and when they have strength left to quit their parishes and kindred, to seek a livelihood in England. But the extraordinary mortality of Manchester and Liverpool in 1846 cannot be ascribed, to any great extent, to the influx of Irish: in Manchester, for example, this influx is stated

* Registrar General's Seventh Annual Report.

† In the reign of M. Aurelius, A.D. 167, the real Oriental plague was carried into Europe by the army returning from the Parthian war, and spread all over the western world, Asia Minor, Greece, Italy, Gaul, &c. Africa alone was perhaps not reached by it. This pestilence must have raged with incredible fury, and it carried off innumerable victims. As the reign of M. Aurelius forms a turning point in so many things, and above all, in literature and art, I have no doubt that this crisis was brought about by that plague. * * * The happiness of M. Aurelius was thus disturbed by the plague, which was carried into Europe from the East, and by the wars with the Germans. * * * It increased in the reign of Decius, that is, from A.D. 256. During the ravages made by the barbarians it spread all over the empire; it now raged in Africa and Egypt, and became settled.—*Niebuhr, Hist. Rome*, vol. v. pp. 281–2, 345.

‡ Chirurgie Militaire et Campagnes de Baron D. J. Larrey, vol. iv., pp. 139, 147, 455.

to have taken place during 'the last two or three months.' Now the mortality of Manchester, Salford, and Chorlton, which is under ordinary circumstances nearly double the mortality of the healthiest parts of the kingdom, rose from 2411 in the three months, July, August, September, 1845, to 4248 in the same months of 1846, before the tide of Irish destitution had set on Lancashire. The increase of mortality commenced at the same time, and has continued since in Birmingham, Oxford, Bedford, and other towns, large and small, where the Irish population is inconsiderable.

"The 'high price of provisions,' 'depression of trade,' and 'distress,' are referred to by the registrars of Stockport and Little Bolton as causes of the high mortality in December. The failure of the potato crop and the dearness of provisions left the poor very ill able to provide the additional clothing and firing required by the severities of the weather, and their sufferings must have been aggravated where their earnings were at the same time diminished. As this 'distress' is not adverted to in the preceding September quarter, and but rarely in the December quarter, it will not account for the excessive mortality of the half-year. In connexion with cold, however, want was the cause of many deaths in December.

"No mention is made of the potato disease having had any direct connexion with the mortality. The potato, in a state of partial disease, has no doubt been extensively consumed, without giving rise to any specific malady in man, or indeed having any appreciable connexion with the disorders of the bowels and fever, which grew prevalent about the time the last crop came into use. The absurd and unfounded fancy that the cholera epidemic, so fatal to infants at the breast and old people, as well as others, is caused by fruit, or has any connexion with the 'plums in season,' derives not the slightest support from the observations of the year when the supplies of fruit were unprecedently scanty. Dr. Baly, the physician to the Millbank Penitentiary, showed some time ago that scurvy was very prevalent in prisons from the dietaries of which potatoes were excluded, and did not exist where potatoes were used.* The potato contains a small quantity of a vegetable acid, in combination with potash (bitartrate of potash, or cream of tartar). It is certain that scurvy, which was formerly common, has almost disappeared since the potato entered largely into the food of the population. If, now that the potato has grown scarce, this disease, characterised among other symptoms by swollen bleeding gums, again become prevalent, its simple prophylactics should be had recourse to.†

"In the above observations on the mortality of particular districts, the mortality of the past year has been compared with the mortality of the same districts in previous years. Manchester in 1846 has been compared with Manchester in 1845 and other years. I shall here call attention for a moment to the difference in the mortality of different places in the same years. The mortality of 1846 was raised much above the average in both Anglesea and Manchester.

---

* Medical Gazette.

† This anticipation of the appearance of scurvy was unfortunately realized. Scurvy became prevalent in many parts of the country in 1847 (*Note August*, 1848).

"The population of Manchester, Salford, and Chorlton in 1841, was	356372
The deaths in the December quarter of 1845 were .	2555
The deaths in the December quarter of 1846 were .	4029
"The population of the Anglesea district in 1841 was .	38105
The deaths in the December quarter of 1845 were .	163
The deaths in the December quarter of 1846 were .	206

Allowing for increase of population. the inhabitants of Manchester, &c., were probably 10 times as numerous as the inhabitants of Anglesea; the deaths were 15 times as numerous in 1845, and 20 times as numerous in 1846.

"Again, the population of Hull was ..... 41130; the deaths in 1845 were 261; in 1846 they were 404: the population of the Isle of Wight was 42547; the deaths in 1845 were 167; in 1846 they were 201.

"Innumerable examples of the same kind may be given from calculations now in progress.

"It is found from the returns of the 7 years, 1838–44, that the mortality of Liverpool and Manchester, and the worst parts of other towns, is nearly double the mortality of tolerably salubrious districts;* and it is here seen, that while the mortality of the latter districts was raised 50 or 60 per cent., the ordinary but unnatural and frightful mortality of the denser districts was raised from 70 to 100 per cent. in 1846 over what it was in 1845.

"It is well known, that the decaying matters of marshes give rise to agues, dysenteries, and fevers; and it is proved satisfactorily by the facts collected under the Registration Act, that the excessive mortality from diseases of the zymotic and other classes, observed in towns, is occasioned by animal or vegetable poisons, with which the atmosphere is charged, in different degrees of concentration, depending on accumulated filth, crowding in dwellings and workshops, the closeness of courts, imperfect supplies of water, and the want of efficient sewers. The high temperature of the summer of 1846, in which the mean temperature ranged from 0°2 to 7°7 above the average during 10 weeks out of 13, accelerated the decomposition, and increased the virulence of these effluvial poisons as well as of the diseases which they promote. Once grown epidemic, the diseases continued to rage during the rest of the year. Thus the mortality of 1846 may be accounted for. If it took place in obedience to any cyclical law, or to a general cause acting simultaneously in Asia and Europe, the great fact remains, that the deaths were nearly twice as numerous in ill-constructed towns, where the poison is concentrated, as in the country, where it is diluted and destroyed by the fresh air.

"The precise degree of influence which the various agencies have in causing the high mortality of towns is not easily determined. Opinions differ as to what fraction of the suffering and death is to be set down to the want of water or of sewerage; crowded lodgings, narrow streets, ill-ventilated workshops; the destitution of skilful medical advice; the neglect of children; doses of opium and inroads of quackery; slaughter-houses and rank churchyards. Similar discrepancies of opinion

* Seventh Report, 8vo, pp. 332–3.

existed formerly as to the causes of the ill health and inefficiency of the navy. Down to the end of the last century the loss of life in our shipping was immense. The first fleet of the East India Company, out of 528, lost 100 men before and 5 after landing, in the voyage of seven months to the Cape of Good Hope. Anson, in 3 ships, lost 626 men out of 961 in 10 months after leaving England. The men had scurvy, dysenteries, putrid fevers; their limbs dropped off; they swooned and died. In the year 1780, the Channel fleet sent 11732 sick to Haslar Hospital; 1457 had scurvy, 240 dysentery, 5539 fever. At that time, Sir James Saumarez said, 'neither the ships nor men could keep the sea more than two months.'* Captain Cook left Deptford in 1772 with 112 men, sailed round the world, and returned in 3 years with the loss only of 4 men by accidents, and 1 by disease. Cook, in a paper read before the Royal Society, described the means which he employed to secure the health of his crew; the care which was taken in the selection of a vessel, in drying and ventilating, in providing good provisions, anti-scorbutics, and an abundant supply of fresh water. In the third voyage the men were equally healthy. After some years had elapsed, and after a reform of the Naval Administration,† the principles established by Cook were carried out by the Admiralty, and the health of the navy was raised to a satisfactory standard. In Parry's three voyages of a year and a half and two years' duration, only 7 men died out of 334. The annual mortality in the last voyage was 0·5 per cent. Cook did not wait till it had been settled how much of the sickness at sea was caused respectively by bad ships, dirty water, rotten provisions, the want of ventilation and of lemon-juice. He procured, amidst great difficulties, all that he believed was requisite to the health of the men. The experiment, though not an *experimentum crucis*, as applied to any one cause, was successful. It did not solve a physiological problem, but it saved the men's lives. If the general measures for the health of towns announced are proceeded with, they will, no doubt, be as successful as the similar measures introduced into the navy, and crowned in Cook by the award of the Royal Society in the last century. He who raises the industrious population of this many-citied kingdom to the natural standard of health, will confer a greater service on the country than Cook; and will indeed be *parens ac deus salutis nostræ;* if, according to Pliny, *Deus est mortali juvare mortalem. Et hæc ad æternam gloriam via!*"

It will be seen from the following Table that the deaths in the 115 districts from which the quarterly return is procured, were to the total deaths in the country during the 6 years 1839–44 as 987084 to 2095415, or as 100 to 212. Using these proportions to deduce the deaths in the 2 years 1845–6 of all England, from the deaths in the 115 districts, we have the two proportions—

Actual Deaths.

(1) 987084 : 2095415 :: 165789 : x = 351942 ; 349366
(2) 987084 : 2095415 :: 191430 : x = 406374; 390315

The first result agrees closely with the facts: the second gives a result considerably above the truth; which implies that the mortality in the great town districts, where the average mortality is high, was increased in

* Cited by Sir Gilbert Blane, Diss., vol. i. p. 18.
† M'Culloch's Statistics of the British Empire.

1846 to a much greater extent than the mortality in the country districts and small towns of the rest of the kingdom. This is in conformity with the law, that where the "average mortality is high, the population "suffers more from epidemics than populations favourably situated." The facts observed in the influenza and cholera epidemics place this principle beyond doubt.

I have continued the publication of the Weekly Returns of the Births, Deaths, and Causes of Death in London; which within the limits I have marked out comprised 1948369 souls in 1841, when the last census was taken; and if the population increases at the same rate (1·551 per cent. annually), as in 1831–41, now contains about 2172000 souls. These returns, made down to the last entry on Saturday, by the registrars in the Metropolis, are received by post every Monday, abstracted on the same day, and published on Tuesday afternoon. It is gratifying to me to be able to state that the returns are sent in with great regularity; and it seldom happens that a single return is missing. The deaths by each kind of disease are shown; the prevailing diseases are recorded; and every epidemic is traced week by week from its origin to its termination. The Quarterly Table is at the present time compiled from returns made by 582 registrars, whose districts, with some agricultural parishes, comprise the principal towns of England, and had 6612958 inhabitants in 1841. The number of deaths and the prevailing epidemics of these districts are published quarterly within a month after the date of the last entry.

I have the honour to be, Sir,

Your faithful Servant,

GEORGE GRAHAM,

Registrar-General.

ABSTRACT OF MARRIAGES.

Note.—When a District runs into two or more Counties it has been placed with the County in which the greater part of the population is situated: hence these groups of Districts designated Counties rarely, if ever, correspond with the strict boundaries of the respective Counties named.

No.	Districts.	MARRIAGES. According to the Rites of the Established Church. Special Licence.	Licence.	Banns.	Superintendent Registrar's Certificate.	Not stated.	TOTAL.	MARRIAGES. Note.—When a District runs into two or more Counties, it has been placed with the County in which the greater part of the Population is situated; hence these groups of Districts designated Counties rarely, if ever, correspond with the strict boundaries of the respective Counties named.

1846.—BIRTHS. 1.—Metropolis.

1846.—ABSTRACT OF TWIN BIRTHS,

Registered in England in the Year ending 31st December—or the Number of Cases in which Mothers were delivered of Two Living Children; distinguishing the *Legitimate* and *Illegitimate*, as well as those in which both were *Males* or *Females*, from those in which *one* was a *Male* and the *other* a *Female*. The Number of Children Born will be obtained in every case by doubling the Number in the Table.

* The mortality of the district of Lewisham, and sub-district of Hampstead, was included in the Metropolitan Returns at the commencement of 1847, for the first time. Therefore the deaths for previous years are not contained in the above table. In the Quarters ending March they were respectively (1840) 170; (1841) 158; (1842) 157; (1843) 128; (1844) 171; (1845) 158; (1846) 142.

† Under the head of *sudden deaths* are classed not only deaths described as sudden, of which the cause has not been ascertained or stated; but also all deaths returned by the Coroner in vague terms, such as "found dead," "natural causes," &c., &c.

* The mortality of the district of Lewisham, and sub-district of Hampstead, was included in the Metropolitan Returns at the commencement of 1847, for the first time. Therefore the deaths for previous years are not contained in the above table. In the Quarters ending June they were respectively (1840) 171; (1841) 172; (1842) 128; (1843) 127; (1844) 126; (1845) 157; (1846) 152.

† Under the head of *sudden deaths* are classed not only deaths described as sudden, of which the cause has not been ascertained or stated; but also all deaths returned by the Coroner in vague terms, such as "found dead," "natural causes," &c. &c.

* The mortality of the district of Lewisham, and sub-district of Hampstead, was included in the Metropolitan Returns at the commencement of 1847, for the first time. In this table the deaths in Lewisham and Hampstead for the December quarter in the previous years (1840-6), are included under the head of causes not specified.

† Under the head of *sudden deaths* are classed not only deaths described as sudden, of which the cause has not been ascertained or stated; but also all deaths returned by the Coroner in vague terms, such as "found dead," "natural causes," &c., &c

CAUSES OF DEATH.	Quarters ending December

METEOROLOGICAL REMARKS
For the Year 1846.

By James Glaisher, Esq., *of the Royal Observatory at Greenwich.*

The mean reading of the barometer for the year 1846 was 29·733 inches, being about its average value. The highest and lowest mean daily readings were 30·511 inches and 28·719 inches. The highest and lowest readings in single observations were 30·543 inches and 28·526 inches.

The mean daily range in spring was 0·188 inch; in summer was 0·132 inch; in autumn was 0·169 inch; in winter was 0·225 inch; and for the year was 0·179 inch.

On one day out of	3,	,,	greater than	0·1 inch	and less than	0·2 inch
,,	6,	,,	,,	0·2	,,	0·3
,,	10,	,,	,,	0·3	,,	0·4
,,	24,	,,	,,	0·4	,,	0·5
,,	78,	,,	,,	0·5	,,	0·6
,,	150,	,,	,,	0·6	,,	0·7
,,	in the year	,,	,,	0·8	,,	0·9

The mean reading of the barometer in spring was 29·674; in summer was 29·800; in autumn was 29·720; and in winter was 29·739 inches.

The temperature of the air was very much above its average value. Its range during the year, from observations taken at intervals of two hours, throughout the year, was 68°·6, and from the readings of self-registering thermometers was 74°·5. The extreme readings were 93°·3 and 18°·8. The highest mean daily temperature was 74°·2, and the lowest was 24°·2. The readings exceeded 90° in the months of June, July, and August.

The mean daily range of temperature in spring was 14°·1; in summer was 18°·5; in autumn was 12°·1; in winter was 8°·1; and for the year was 13°·2. The range in summer was large.

The mean temperature for those four quarterly periods were 48°·3, 64°·3, 52°·2, and 40°·3. For the year it was 51°·3. The value for summer is much above its average value.

On one day out of	11,	the difference of temperature during the day was	less than	5°		
,,	4,	,,	was greater than	5°	and less than	10°
,,	3,	,,	,,	10	,,	15
,,	5,	,,	,,	15	,,	20
,,	10,	,,	,,	20	,,	25
,,	22,	,,	,,	25	,,	30
,,	78,	,,	,,	30	,,	35

These numbers show that the number of large ranges in this year is greater than usual.

The mean temperature of the water of the Thames for the year was 54°·2, from daily observations by Lieut. Sanders, R.N., superintendent of the Dreadnought Hospital Ship. The water on the average was 2°·9 warmer than the air.

The mean temperature of the dew point in spring was 42°·9; in summer was 56°·7; in autumn was 48°·4; in winter was 36°·7; and for the year was 46°·2.

The water mixed with the air was such in quantity, that its average weight balanced a column of mercury of 0·295 inch in height in spring; of 0·468 inch in summer; of 0·359 inch in autumn; of 0·240 inch in winter; and of 0·341 inch for the year. On one day (August 6) it balanced a column of mercury of 0·644 inch in height, and on another day (December 31) it balanced one of 0·121 inch only.

The mean degree of humidity (complete saturation = 1) in spring was 0·874; in summer was 0·804; in autumn was 0·828; in winter was 0·902; and for the year was 0·852.

The prevailing wind was the S.W.; the next in order of prevalence were S.S.W., and W.S.W. The mass of air which passed from all the remaining directions was small in amount, compared to that which passed from the above directions. The E. and its compounds were insignificant in amount.

One hour out of $2^h\ 0^m$ was calm during the day; and one hour out of $4^h\ 7^m$ was calm during the night.

The great calmness of the air during the day is very remarkable.

There were 7 days during which the sky was almost cloudless, and there were 55 days during which the sky was almost wholly covered by clouds.

Rain to the depth of 25·9 inches was collected in the gauge placed on the ground.

,, 22·6 ,, 24 feet above the soil.

,, 13·5 ,, 50 ,, ,,

APPENDIX

PART I.

Illustrations of the method employed in the Calculations of the Rate of Mortality among the Population, living at different Ages, in the Divisions, Counties, and Districts of England.

The two upper sections of the tables commencing page 176, contain the population at each of 17 ages, enumerated as having slept in the respective districts on the night of June 6–7th, 1841; and the deaths registered at the same ages in the 7 years ending December 31st, 1844.

The lower section contains calculations based on the two upper sections. The *year* is taken for the unit of *time;* the fixed number living is 100; and the object of the tables is to show the average deaths in that time among persons of 15 and under 25, or among persons of any of the other ages set down in the tables. If the population had been *stationary*, a person of the same age being invariably substituted for every one removed by death or by any other cause, the division of the number of *deaths in a year* at a given age by the numbers living would exhibit the rate of mortality. The deaths in 7 *years*, divided by 7 *times* the living enumerated at any one time, would also give the mean *annual* rate of mortality, or the mortality, to *one* living. This rate multiplied by 100 is = the annual mortality *per cent.* The population in almost every district increased in the 7 years 1838–44; and this has to be taken into account in the calculation. If the population increased regularly in geometrical progression, the numbers living in the *middle of the year* 1841 represent the mean numbers living through the 7 years 1838–44; these numbers multiplied by 7 represent the lifetime in years out of which the deaths occurred. If the population increased in arithmetical progression, 7 times the number living in the middle of the year would also be the lifetime in years out of which the deaths occurred. Many deviations from this rule no doubt occurred, and the population at different ages probably increased at different rates. No error of any consequence can arise from assuming, as we do, that the population at each age increased at the same rate as it did in 1831–41, from June 6–7th to the middle of the year 1841, which may be set down as ·07 year.

The census of 1831 was commenced May 30th, 1831; we assume the interval between the census of 1831–41 to be 10·0219 years, logarithm 1·0009501. There is some difficulty in comparing the male population of 1831 and 1841, as soldiers and sailors ashore were not enumerated in 1831, and were enumerated in 1841 in the district in which they happened to sleep. The rate of increase has therefore been deduced from the enumerated *female* population 1831–41; by the subjoined formulæ:—

f_{31} = female population enumerated 1831.
f_{41} = female population enumerated 1841.

$$\left(\frac{f_{41}}{f_{31}}\right)^{\frac{1}{10\cdot0219}} = r = 1 + \text{annual rate of increase.}$$

$$\frac{\lambda f_{41} - \lambda f_{31}}{10\cdot0219} = \lambda r;^{a}$$

$$\text{and } \lambda (\lambda f_{41} - \lambda f_{31}) - \lambda (10\cdot0219) = \lambda (\lambda r).$$

[a] λ is put for the logarithm, $\varkappa$ for the complement of the logarithm, in these formulæ.

And $\cdot 07\ \lambda\ r = \lambda$ (1 + rate of increase from June 7th to the middle of the year 1841).

The ages of a few of the living, and a few of the dying were not returned; the unreturned ages of persons may be assumed to be the same as those of persons whose ages were actually returned.

Let L = the living at all ages, June 6–7, 1841.

L′ = the living whose ages were *specified* at the same date.

7 . D = the deaths in 7 years, 1838–44, at all ages.

7 . D′ = the deaths in 7 years, 1838–44, at all specified ages.

l_x = the living in the middle of 1841, at any age x.

l'_x = the living enumerated at any age x on June 7th, 1841; and $r^{\cdot 07}\ l'_x$ = living that would have been specified at age x, if the census had been taken in the *middle* of the year 1841.

$7 . d_x$ = the deaths in 7 years at any age x; d_x = deaths at age x in 7 years divided by 7.

$.7 . d'_x$ = the deaths in 7 years specified at any age x.

m_x = the annual rate of mortality at age x.

Then $\mathrm{L}' : \mathrm{L} :: r^{\cdot 07}\ l'_x : l_x = \frac{\mathrm{L}}{\mathrm{L}'} \times r^{\cdot 07} \times l'_x$, the living at age x in the middle of 1841.

$$7\ \mathrm{D}' : 7\ \mathrm{D} :: 7\ d'_x : 7\ d_x = \frac{\mathrm{D} . 7\ d'_x}{\mathrm{D}'} = \text{the dying in 7 years at the age } x.$$

$$\text{And } \frac{\mathrm{D}}{\mathrm{D}'} . d'_x = d_x$$

$$\frac{d_x}{l_x} = \frac{\frac{\mathrm{D}}{\mathrm{D}'} . 7\ d'_x}{7 . \frac{\mathrm{L}}{\mathrm{L}'} . r^{\cdot 07}\ l'_x} = \frac{\mathrm{L}' . \mathrm{D}}{7 . \mathrm{L} . \mathrm{D}' . r^{\cdot 07}} \times \frac{7\ d'_x}{l'_x} = m_x = \text{the annual mortality}$$

per cent. at the age x.

This formula may be divided into two parts; and whatever the age x may be, the first part of the formula remains invariable. For the convenience of calculation, therefore, put $\left(\frac{\mathrm{L}' . \mathrm{D}}{7\ \mathrm{L} . \mathrm{D}' r^{\cdot 07}}\right) = z$

$$\lambda\ \mathrm{L}' + \lambda\ \mathrm{D} + \kappa\ 7 + \kappa\ \mathrm{L} + \kappa\ \mathrm{D}' + \kappa\ (r^{\cdot 07}) = \lambda\ z$$

Mode of expressing Age.—A person is said, in common language, to be of the age of 20 until he attain his next birth-day, and is 21. The persons referred to the age 20 are persons aged 20 years and 1 day, 2 days, 3 days, ... 364 days. The ages of persons in a series of the following kind: under 5 years of age; 5 and under 10; 10 and under 15; 15 and under 25, &c., are conveniently expressed thus: 0—, 5—, 10—, 15—, 25—, 35—. The numbers against 5—, will also express the numbers of that age and under the age following in any series whatever.

Example of the way in which the rate of mortality at each age has been deduced in the following series of Tables:—

COUNTY OF SURREY.—MALES.

Operation for obtaining the annual rate of increase of female population, 1831–41.

Total Female Population.	Numbers.	Logarithms.	
$1841 = f_{41}$	$= 93425$,	$\lambda\ 4{\cdot}9704631$	$1{\cdot}0009501 = \lambda$ interval of time $= \lambda\ 10{\cdot}0219$
$1831 = f_{31}$	$= 80978$,	$\lambda\ 4{\cdot}9083670$	
$\lambda f_{41} - \lambda f_{31}$	$= 0{\cdot}0620961$	$\bar{1}{\cdot}7930643$	$\lambda\,(\lambda f_{41} - \lambda f_{31})$
λr	$\cdot 00061960$	$\bar{3}{\cdot}7921142$	$\lambda\,(\lambda f_{41} - \lambda f_{31}) - \lambda\ 10{\cdot}0219$
	$\cdot 07$		
$\lambda\ r^{\cdot 07}$	$\cdot 00043372 0$		
$x\ r^{\cdot 07}$	$\bar{1}{\cdot}9995662 80$		

The interval of time between the two censuses, May 30th, 1831, and June 6–7th, 1841, was taken at 10 years 7 days = $10{\cdot}0219$, $\lambda\ 1{\cdot}0009501$.

The calculations, without any correction for those whose ages were unspecified, or for increase of population, are all readily performed by common arithmetic: thus, the boys living in Surrey under the age of 5, in 1841, were 11718; the deaths of boys under the age of 5, in the 7 years 1838–44, were 3982, specified as at that age, or $\frac{3982}{7} = 569$ annually. To obtain the annual mortality per cent., we have by the rule of proportion:

$$11718 \ : \ 569 \ :: \ 100 \ : \ x = \frac{56900}{11718} = 4{\cdot}855$$

or more correctly—

$$11718 \ : \ \frac{3982}{7} \ :: \ 100 \ : \ x = \frac{3982 \times 100}{7 \times 11718} = 4{\cdot}855$$

11718) 56900 (4·855; and 82026) 398200 (4·855

46872	328104
100280	700960
93744	656208
65360	447520
58590	410130
67700	373900
58590	328104
9110	45796

The error is $4{\cdot}855 - 4{\cdot}772 = {\cdot}083$; and is not 1-59th part excess.

To obtain the annual mortality per cent. at all ages, as the total male population was 94443, and the deaths of males, in 7 years, were 12284, we have the proportion:

$$94443 \ : \ \frac{12284}{7} \ :: \ 100 \ : x = \frac{1228400}{661101} = 1{\cdot}858$$

661101) 1228400 (1·858

661101
5672990
5288808
3841820
3305505
5363150
5288808
74342

The error here is only 1·858 — 1·856 = ·002, and is quite insignificant, as the only point neglected is the increase of population from June 6–7 to the middle of the year 1841.

London Workhouses. The workhouse of the district of St. Luke is in Shoreditch, the workhouse of the Strand is in Pancras, the workhouses of the City of London district are in Camberwell, and Stepney. In calculating the mortality of the respective districts, the deaths and population of these outlying workhouses were taken from those districts in which they happen to be situated, and placed in the districts to which the inmates belong. No other correction for workhouses is required, unless it is attempted to calculate the mortality of sub-districts. Then if the workhouse population, and the paupers who die, can be referred to their respective sub-districts, that is the proper course for determining the relative mortality of the sub-districts among themselves. The condition of the workhouse is an important element in the health of the district; and sub-districts supply the workhouse with paupers in very different proportions; but when the localities from which workhouse paupers come is unknown, no better *general* rule can be laid down than the following: distribute the deaths in the workhouse, at each age, over the several sub-districts, in the proportions of the deaths registered out of the workhouse in those sub-districts; distribute the population in the workhouse, at each age, over the several sub-districts, in the proportions of the population enumerated in those sub-districts; and then divide, as usual, the deaths by the living at corresponding ages.

London Hospitals. In deducing the mortality of the several London districts, the population and the deaths in the hospitals were subtracted from the population and deaths of the respective districts in which the hospitals happened to be situated.—(See Tables, in 8th Report, folio, pp. cxviii—cxxix.) The hospital population and deaths at each age were then distributed over all the districts of the metropolis by the following formula:—

$$\frac{P'_x}{P_x} \times \frac{D_x}{D'_x} \times m'_x = m_x : \text{ or}$$

$$(\lambda P'_x + \kappa P_x + \lambda D_x + \kappa D'_x) = \lambda c_x ; \text{ and } \lambda c_x + \lambda m'_x = \lambda m_x :$$

in which P_x = the population of London at any age x;

P'_x = the population of London at the same age x, exclusive of the population of the same age in hospitals;

D_x = the deaths in London at the age x;

D'_x = the deaths in London at the age x, exclusive of the deaths at the same age in hospitals; m'_x = the rate of mortality at the age x in any district, without correction for deaths and population in hospitals, of persons belonging to that district;

m_x = the corrected rate of mortality at the age x.

LONDON.—CORRECTIONS FOR DEATHS IN HOSPITALS

The c_x varies at the several ages, and in the two sexes, as the proportion of males and females and of deaths in hospitals, at the several ages, is very different. The logarithms of the several values of c_x are deduced by the following operations. The $\lambda\, c_x$ on a slip of paper is added to the logarithm m'_x of every London district.

Note.—The hospitals comprised in the return are the St. George's Hospital, Westminster Hospital, Grenadier and Fusilier Guards' Hospitals, Charing Cross Hospital, Middlesex Hospital, University College Hospital, London Fever Hospital, Small Pox Hospital, King's College Hospital, Royal Free Hospital (now in Pancras, formerly in Holborn), St. Bartholomew's Hospital, London Hospital, St. Thomas's Hospital, Guy's Hospital, Greenwich Hospital, Ordnance Hospital, Dreadnought Hospital (ship). The deaths in the lunatic asylums are not included in the calculation of the mortality of the several districts. They are included, however, in the mortality of the whole of the metropolis

The male population in this Table includes 2599 of the Metropolitan Police on duty, whose ages were stated, as well as 491 of the police of the City of London, and 1366 men on the river. The ages of the 1857 men were assumed to be the same as those of the 2599. 6031 military in barracks are excluded from the Table.

* Deaths uncorrected for error in Marylebone, and an error of 28 males, and 25 females in the first table at all ages, and exclusive of those at unspecified ages.

The rest of the population whose ages were not specified do not appear in the Table, which however includes 19 males and 29 females in a detached part of the parish of Clerkenwell, which is completely surrounded by the Edmonton district.

The data on which the calculations are based are given in the following pages, and in the 8th Report, pp. cxviii—cxxix; and the preceding as well as the subsequent examples will enable any person to repeat the calculations, which were performed separately, by two calculators, and then compared. They have been carefully read in type.

NOTE

Respecting the differences between the Population as given in Part I., and in Parts II. and III, which appear only in the folio edition.

Owing to changes which have taken place in several of the Registration districts subsequently to the period (1838–44) to which the calculations of Mortality refer, the population given in these tables will be found in some instances to differ from that assigned to the same divisions, counties, and districts in Parts II. and III., which show the population of the districts and sub-districts as they were constituted on January 1st, 1849. The notes under the districts, Part II., give the dates of the several changes, which have arisen chiefly from the transference of parishes and places from one district to another; but in addition the following *districts* extending into two Parliamentary Counties or Ridings have now been transferred to other Registration Counties, and are so given in the arrangement Parts II. and III.; viz., *Dudley*, from Worcester to Staffordshire; *Todmorden*, from Lancashire to the West Riding of Yorkshire; and *Tadcaster*, from the East Riding to the West Riding of Yorkshire. In all cases the Population used in the calculations has been that out of which the deaths actually occurred. And where parishes were in districts a part only of the 7 years, the necessary corrections have been made.

TABLES

OF THE RATES OF INCREASE, AND OF THE POPULATION, DEATHS, AND RATES OF MORTALITY

AT DIFFERENT AGES,

IN THE DIVISIONS, REGISTRATION COUNTIES, AND DISTRICTS OF ENGLAND.

FEMALE POPULATION and the Annual Rates of Increase 1831-41; the Annual Mortality per Cent. and Number of Persons Living to one Annual Death, 1838-44, in the Divisions, Counties, and Districts of England.

a The part of the Parish of St. Sepulchre which is situate in the County of Middlesex (Finsbury Division of Ossulstone Hundred) was included in the West London District from its formation down to 20th June, 1845, when it was transferred to the Holborn District, in which it still remains. The mortality of East and West London, therefore, includes the population of St. Sepulchre in Middlesex.

b A decrease of 510 is observed in the Female population of the City of London district since 1831.

c 189 Females have been deducted from this number in the calculations, their Ages not being stated, and their presence attributed to Railway Works carrying on in the district of Godstone.

d A decrease of 327 is observed.

2.—SOUTH EASTERN DIVISION.

No.	DISTRICTS. a A decrease of 613 is observed.

b This number is 234 in excess of the true female population in 1831, owing to a duplicate return in the Census Abstract, which was not discovered until the calculations were completed.

c A decrease of 21 is observed.

d A decrease of 577 is observed. The decrease of Population in several of the districts of Gloucestershire is attributed to the depressed state of the West of England cloth manufacture, when the Census of 1841 was taken.

e A decrease of 832 is observed.

f A decrease of 232 is observed.

g A decrease of 285 is observed.

[a] The manner in which the Population and Deaths in districts of London have been corrected for Hospitals and Workhouses is shown in the 8th Annual Report, folio, pp. cxviii-cxxix.
[b] The return of Deaths in All Souls, one of the sub-districts of Marylebone, was found to be in

and Mortality, in Districts.

MIDDLESEX (*part of*).

The Table is read thus:—Lewisham District, out of 100 Children (Females) living under 5 Years of Age, 4·663 died; out of 100 Women living at 45 and under 55 Years of Age, 1·646 died. East and West London District, out of 100 Children (Males) living under 5 Years of Age, 11·967 died; out of 100 Men living at 45 and under 55 Years of Age, 3·167 died. London, out of 100 Women living at 25 and under 35 Years of Age, ·917 died; out of 100 Men living at 25 and under 35 Years of Age, 1·074 died.

a The return of Deaths in All Souls, one of the Sub-districts of Marylebone, was found to be incorrect in the Years 1840-44; in the calculation, the mortality of the Sub-district in the 7 Years, 1838-44, was

LONDON, arranged in the order of the Mortality of Females of all Ages, the Healthiest placed first.

1841, *and the Deaths Registered in the 7 Years,* 1838–44.)

assumed to be the same as in the 4 Years, 1838-9-45-6, the Population being stationary.

The high Mortality under 5 Years of Age in St. George Hanover Square, and St. James, indicates that the mortality at the more advanced Ages in those districts is understated: which arises from these circumstances: (1) the Population at the last Census is overstated, as it was taken in June, the height of the London season; (2) the servants of families who come to town are probably in good health, they enjoy a very easy position, and if taken seriously ill probably go home to the country, or to St. George's Hospital, of which the deaths, as in other Hospitals, are not included in the return of the district.

2.—SOUTH EASTERN DIVISION.

a The population of this group of Districts was increased at the time the Census was taken, by the number of railway labourers employed in them. Their ages were not returned, and they have been excluded in the calculations of Mortality.

POPULATION, DEATHS, and MORTALITY, in DISTRICTS.

a A great increase of population has taken place in Easington since 1831, owing to the opening of new coal mines at Haswell, Thornley, and other parts of the district.

b An examination of the returns of the South Shields sub-district induced the suspicion that frauds had been committed by the late Registrar. He was tried at the Durham summer Assizes, 1844, for the registration of purely fictitious deaths, and for forging the signatures of informants; pleaded guilty, and was sentenced to 12 months' imprisonment. He was the postmaster and relieving officer of South Shields; and great exertions were made by his friends, who were numerous

and influential, to obtain a mitigated punishment on the ground—of ill health at the time of the fraud, of his former respectability, and his numerous family. Under other circumstances the sentence for the felony might have been more severe. Although the fraud went on but for a short time, it deprives the South Shields returns for that period of all statistical value. From the general character and standing of the Registrars, the commission of these crimes was not anticipated; but such precautions are now taken that it is believed no frauds, like those committed by the late Registrars of South Shields, All Souls, Marylebone, and recently in Liverpool, can be repeated with impunity.

INDEX

TO THE NINTH ANNUAL REPORT.

Age, mode of expressing, 157; and example of the way in which the mortality at each age has been deduced, 158–9.
Anson's ships, and others, mortality in, 36.
Appendix:—Method and illustrations of the calculations of the rate of mortality among the population at different ages, 156 *et seq.*; population, deaths of seven years, and annual mortality in England and London, at several ages 176–7; in 2nd to 11th divisions 178–9; in counties 180–7; in districts of London 188–93; annual mortality per cent. in London districts, (in years 1838–44), the healthiest placed first, 194–5; population, deaths, and annual mortality in other districts 196—245.

Bank circulation, bullion, deposits &c., (in 1845, 6) 8; money market (in 1846, 7), evidence before Committee 9, 10.
Bankrupts (in 1842–6), 4.
Banns, &c., marriages by (1838–46), 18. For 1846, *see* Tables 40–59.
Birmingham gun trade brisk in 1846; the town shows a considerable increase of marriages throughout 1846, 45; trade of 1848 in a depressed condition, shown by evidence before committee, 12, and great decrease of marriages in the first quarter of 1848 as compared with the same quarter of 1846, 13; marriages, births, deaths, population in 10 years and quarters 13, 16, 17; marriages (1785–90), 14; the town has multiplied its marriages in a century, and more than doubled its population in 40 years, 13; violent fluctuations from 1780 downwards, 13; trade of 1824–6 in Birmingham when money and employment experienced a change, 13; remarks on overtrading 1824–8, 13 *et seq.*; iron trade stimulated by railways (1845–7), 14; increase of population and income from 1801, 15; saving recommended against adversity, 17.
Births (in 1846), 1; in quarters of 9½ years 2; comparative view of births and deaths (1838–46), 1; proportion of to population in eight years, 1; excess in rate of births over deaths in eight years, 1; excess of births over deaths in quarters of 9 years, 2; births (in each of years 1842–6), 19; out of wedlock, proportions in several years, 19, 20; twins, triplets &c., in and out of wedlock, 20; excess of births in United Kingdom, its effect diminished by emigration, 33.
Birth Tables. For 1839–46, in divisions and counties 62–3; for 1846 (in the year and in quarters) in divisions and counties 64–5; the same in districts 66–77. Illegitimate Births in 1846, (in quarters) in divisions and counties, 78–9; the same in districts 80–91. Twin Births, legitimate and illegitimate, distinguished in sex, in divisions and counties, 92; the same in districts 93–100; triple births according to sex, 101; quadruple, 101. Births in 1846, in divisions (running with deaths in the same year), 119; the same in counties, 120–3; the same in districts 124—145.

Censuses of 1831–41, rate of increase of population in the interval, 156.
Certificates, marriages by, for 1846. *See* Tables 40–59.
Chapels, &c., marriages in (1838–46), 18. For 1846, *See* Tables, 40–59.
China treaty, mills built exclusively for the Chinese trade, 10; opening of China trade, 14.
Commons' committee, evidence before 9, 10; Birmingham evidence, 12, 13; 16, 17, (*note*).
Consols (1841–4), 3; (in 1846), 8.
Cook's sanatory measures, 36.
Corn. *See* prices and importations; repeal of corn-law, 5, 10.
Cotton imported (in 1842–6), 7.
Criminals (in 1842–6), 4.

Deaths (in 1846), 1; in quarters of 9 years and latter half of 1837, 2; comparative view of births and deaths (1838–46), 1; proportion of, to population in 9 years, 1; excess in rate of births over deaths in 8 years, 1; deaths and excess of births over deaths, in quarters of 9 years (and half of 1837), 2; deaths in quarters (of 1845, 6), 4; extracts from the quarterly returns of 1846, 20–37; mortality of the first quarter of 1846, compared with that of previous years, 20; low mortality of first quarter of 1846, the effect of mild temperature, 21; in the north the mortality raised by

scarlatina, 21; deaths in the quarters of 1838-46; also in 115 districts which made quarterly returns, and in other districts (1839-46), 20; mortality augmented in second and third quarters of 1846 by high temperature acting on putrescent matter, 23-6; and other causes, 35-6; local differences of mortality, 26; Surrey and Manchester compared, 27; mortality great in last quarter of 1846, from typhus, diarrhœa, influenza, &c.; increase shown in particular places, 30-1; the cold not the principal cause, 32: immigration of Irish, 32; high price of provisions and distress, 34; mortality of Manchester and Anglesea compared, 35; of Hull and the Isle of Wight, 35; health of the navy at different times, 36; the mortality of 1846 increased to a much greater extent in large towns than in the country, as shown by a comparative statement of deaths in two years, 36-7.

Death Tables. For 1838-46, in divisions and counties, 102-3; for 1846 in divisions and counties, in quarters, 104-5; the same in districts, 106-118. Deaths at different ages (months, years,) in divisions running with births for the same year, 119; the same in counties, 120-3; the same in districts, 124-145. Deaths in London from all causes in the quarters of eight years (1840-7), 146-153.

Diarrhœa, &c., in London, in September quarter of 1846, 24; in September quarters (1845-6), 29; in September and December quarters (of 1846), 30-1.

Diseases fatal in London, in the quarters of eight years (1840-7), 146-153.

Dissenters, marriages of, (1838-46), 18. For 1846, *see* Tables, 40-59.

Emigrants in 9 years (1838-46), 1.

Expenditure of 1846, gross and net, 10.

Exports, official values of (in 1842-6), show a decrease on the last year, 7.

Febris castrensis, 33.

Fluctuation in marriages, an expression of the people's prospects, 3; amount of in 1842-5, 3; in 1842-6 equal to 16 per cent. correcting for population, 4; fluctuations in Birmingham, 13; observations thereon, 14-18.

Glaisher's, Mr., remarks on the year 1846, 154-5. *See* also Meteorology.

Hospitals of London, mortality and population of, distributed over metropolitan districts, 160; formula and logarithmic operation, corrections for deaths in hospitals, 160-2; population and deaths of 7 years at specified ages, in London and London hospitals, 165.

Illegitimate births, proportions in several years, 19, 20; legitimate and illegitimate, twins and triplets, 20. For 1846, *see* Tables 78-91, 92-109.

Importation of wheat (in 1832-46), 6; of coffee, tea, sugar (in 1842-6), 6; of cotton, showing a remarkable decrease in 1846-7; official value of imports in the 5 years, 7; showing a decrease (in 1846), 7.

Indian conquests, 11.

Irish disturbance, and bill for the "protection of life," rejected, 11; arms bill withdrawn, 11; famine and public works, 11, 12; gun-trade of Birmingham revives, in 1845, in consequence of Irish demand, 12; immigration of Irish, 32-3.

Jews, marriages of, (1838-46), 18. For 1846, *see* Tables 40-59.

Licence, special, non-special, marriages by, (1838-46), 18. For 1846, *see* Tables 40-59.

London Abstracts of Causes of Death (1840-7), 146-53.

Malt-duty, receipts from (in 1842-6), 6; increase equal to 14 *per cent.*, 6.

Manchester, waste of infant life in, 28-30; crowding of Irish here and at Liverpool, 32-3, mortality here compared with that of Surrey, 27; with Anglesea, 35.

Mark signatures (1839-46), 18. For 1846, *see* Tables, 40-59.

Marriages (in 1846), 1; in nine years (1838-46), 1; proportion of the married to population in eight years, 1; marriages in quarters of 9½ years, 2; table of persons married in each year from 1756 to 1846, 3; marriages in quarters (of 1845-6), 4; in 1842-6, in twelve principal towns, 5; marriages in church or elsewhere (in the years 1838-46) by licence, banns, certificate, in chapels, offices, &c. 18; also marriages under age, &c., remarriages, signed by marks, 18, 19; proportion *per cent.* of marriages under and of full age (1843-6) 19; under age (1839-46), 19; proportion *per cent.* of mark signatures (1839-46) 19; proportion *per cent.* of widowers and widows, 19.

Marriages (fluctuations of), express the people's prospects, 3; tendency to, correctly shown by proportion to unmarried women living at the same time, 4; *fluctuation* (1842-6) 4; tendency to marry in 1846 exceeded that in 1845 more than is shown by relative numbers, 4; actual decrease in latter half of 1846, concurrent with increase of mortality, 4; a decrease in 1846 as compared with 1845 in Yorkshire and Lancashire, 4; Birmingham an exception among principal towns, as showing a considerable increase, 4; the *fluctuation* of 1842-6 with contemporaneous returns of crime, bankruptcy, savings' banks, poor relief, 4, 5; *increase* of 1844, with revival of commerce, consols

at 100, deposits in savings' bank eleven millions above payments, increased imports, and wheat at 51 shillings, 3—6; the *fluctuation* of 1845–6, showing a *decrease* of marriages at the end of the latter year, when imports and exports began to decline, with *increase* of criminals, bankrupts, paupers, and *decrease* of money deposits, 4, 5; *increase* of the year 1846 on 1845, concurrent with rise of wheat from 45*s.* to 54*s.*, imports of coffee rose from 50 million lbs. to 52, of tea from 44 to 47; of sugar from 547 to 585, of duty on malt from 43 to 45 million *l.* 6, and a surplus of revenue on expenditure, 10; official and declared values of imports and exports, which show an increase in previous years, show a decline in 1846, imports of cotton, flax, hemp, wool, silk fell in this year, 7; capital authorized to be raised for railways rose from 6 millions (in 1842) to 124 (in 1846), 7, 8; amount expended rose from 3 to 36, 8; speculation at its height in 1845, rate of interest was advanced, and panic ensued, 8; commerce at the height of "apparent prosperity" in the early part of 1846, took an unfavourable turn in the middle, 9; condition of the country as described by witnesses before the Commons' Committee, 9, 10; violent *fluctuations* of marriages at Birmingham from 1780 downwards; *great rise* (in 1780–4) at the close of American war, 13; in 1785-90 *another fluctuation* in connection with buckles, *ibid.*; from 1801, a year of famine, to 1806, enormous *rise* and *fall*, *ibid.*; other *fluctuations* in 1812–17, in 1820–6, in 1832-7, each period embracing about 6 years, and attended with speculation, 13; for two families created in 1842 there were three in 1846, with proportionate increase of work and wages, arising from stimulus to the iron trade given by railways, easy discounts, opening of China trade, &c., 14; anticipation of the profits of future years, 15; excess of income should be saved against recurrence of adversity, 15, 17; flux and reflux a condition of progress, vicissitudes to be alleviated by science, 18.

Marriage Tables; for 1839-46, in divisions and counties, 39; for 1846, and in quarters, in accordance or otherwise with rites of the established Church, by licence, banns, certificates, between bachelors and spinsters, &c., widowers and spinsters, &c., widowers and widows, men and women under age signing with marks (in divisions and counties), 40–1; the same in districts, 42-59. Ages, so far as returned, of men and women married in 1846, 60; ages of bachelors and spinsters married, 60; ages of bachelors and widows, widowers and spinsters, widowers and widows at marriage, 61.

Marylebone, bad sanatory state of, 27–8.
